Already using Google Forms? Keep using it.

You don't need to switch assessment platforms to start using AI proctoring.

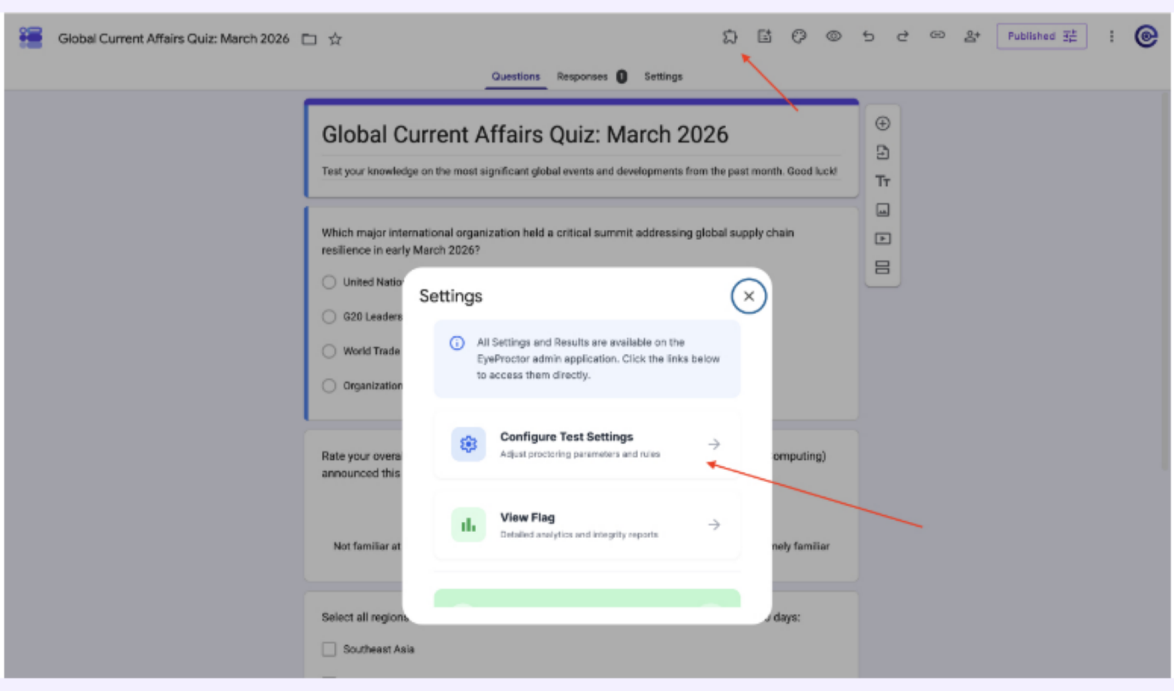
With Eye Proctor's Google Forms add-on, you can turn your existing forms into secure, proctored assessments.

Add Proctoring to Google Forms →

If you're already using Google Forms for quizzes, exams, or candidate assessments, there's good news.

You can keep your questions exactly where they are.

Eye Proctor integrates with Google Forms, making it easier to monitor assessments and review suspicious activity without rebuilding your tests.



Here's how it works

1. Install the add-on

Find Eye Proctor on Google Workspace Marketplace and install it for Google Forms.

2. Configure your assessment

Open your Google Form, access Eye Proctor from Extensions, and choose your preferred monitoring settings.

3. Share your proctored assessment

Once your assessment is ready, share the Eye-generated assessment link with your candidates.

4. Review assessment activity

Access flagged events, supporting evidence, and reports from your Eye dashboard.

Your forms. Your questions. Smarter monitoring.

Whether you're assessing students, screening candidates, or conducting online tests, Eye makes it easier to add an extra layer of assessment integrity to the tools you already use.

No need to recreate your questions or migrate to another assessment platform.
