Unscheduled Stop	Enabled
After Hours Driving	Enabled
Vehicle Speed Violation (Harsh)	Enabled

Escalation & Issue Workflows

- Off-Route Alerts
- Unscheduled Stop Detection
- Missed ETA Notifications

Driving Time & Fatigue Management

Daily Rolling Driving Time Reports

Automatically compile and deliver driving time summaries for all drivers across your fleet over the past 4 weeks. The report highlights days where overtime or compliance thresholds were exceeded, giving fleet managers clear, actionable data without manual tracking or complex calculations.

Continuous Driving Rest Reminders

Proactively notify both drivers and dispatchers when approaching maximum continuous driving periods or distances. CtrlBeacon can send escalating alerts through multiple channels to ensure messages are received and acknowledged.

After-hours Alerts

Instantly flag any unauthorized vehicle movement outside of scheduled operating windows. The system provides immediate notifications with vehicle location, driver details, and timestamp data, enabling rapid response to potential policy violations.

Managers can customize alert thresholds and notification recipients based on severity levels.

The screenshot displays the CTRLBEACON interface for a "Driving Time Report". The report covers the period from 21 Nov 2024, 00:00 to 28 Nov 2024, 00:00. The data is presented in a table with columns for the driver's name and driving times for each day from 11/21/2024 to 11/27/2024. The table shows driving times in HH:MM:SS format, with some cells highlighted in red to indicate overtime or compliance issues. A sidebar on the left contains navigation options like Overview, Issues, Watchers, Logs, Reports, Assets, and Settings. The bottom left corner shows the user's name, Andrew Cowley, and a login button.

Route Adherence & Compliance

Off-Route Alerts

Trigger when vehicles deviate from prescribed routes over a tolerance threshold.

Unscheduled Stop Detection

Automatically identifies when vehicles halt outside designated stopping points or route waypoints.

Missed ETA Notifications

Proactively warn dispatchers when delays will cause arrival windows to be missed before they become critical.

Route Adherence & Compliance

Arrival/Approach Notifications

Automatically notify relevant stakeholders when vehicles reach their waypoints.

Long Delays at Stops

Detect long periods spent in loading/off-loading zones, weighbridges and other areas.

Late Start

Instantly flags when vehicles haven't begun their scheduled routes by the designated departure time.

Risk Management

Driving in High Risk & No-Go Areas

Real-time alerts when vehicles approach or enter designated high-risk or no-go zones.

Unauthorized Stops

Immediate alerts for stops exceeding defined thresholds outside approved locations and schedules.

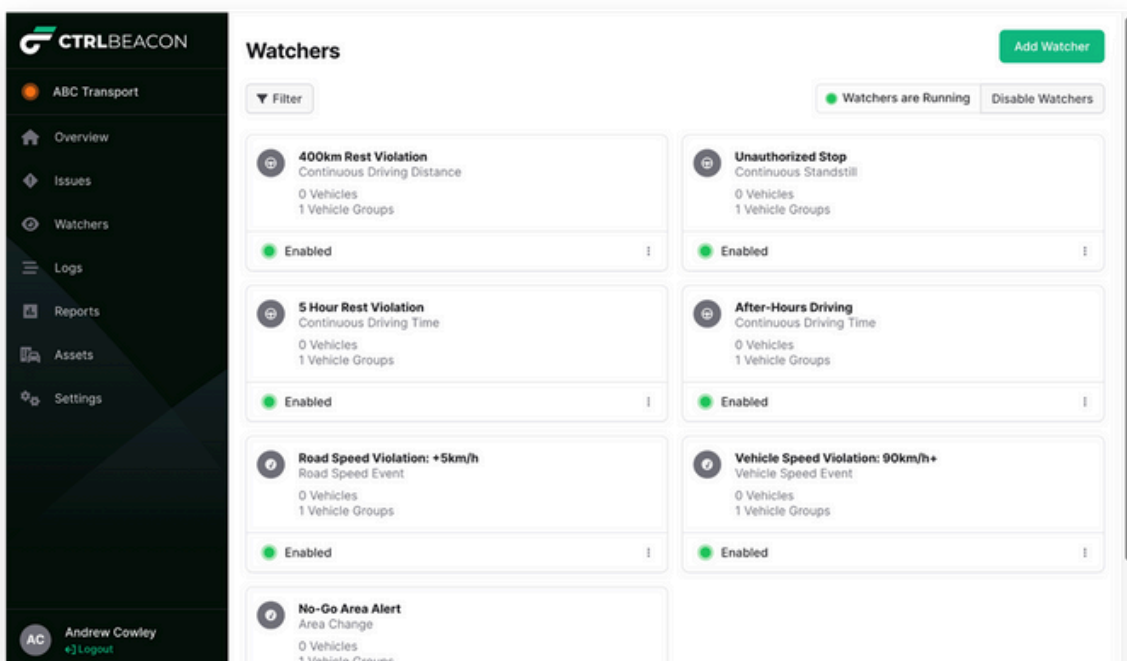

Driving Outside of Schedule

Immediately detect any driving outside of scheduled driving time and/or outside of authorised areas such as depots or truck stops.

Speeding & Harsh Driving*

Automatically detect speeding or harsh driving over defined thresholds. Coach drivers proactively with in-cab notifications whenever speeding or harsh driving is detected.

***Available with selected telematics providers only.**

Escalation & Issue Workflows

Incidents and events can be configured to escalate to different people based on severity or thresholds.

Every incident or alert can kick off a workflow with an issue automatically assigned to the relevant person.

Issues are a centralised digital paper trail including details of the event (vehicle, driver, order number, etc.) a set of instructions to resolve, and comments and actions taken to get to resolution.

Issues New Issue
