# Lumara SecOps Cloud

## A Unified Platform That Scales With You

### Managed 24/7 by our Australian-based SOC

Lumara delivers clarity from the chaos and strengthens your defence without forcing you to rip and replace your existing investments. We unite your existing security tools into a single, intelligent platform all delivered by our Australian based Security Operations Center (SOC).

**33M+**
Malicious Interactions Detected Monthly

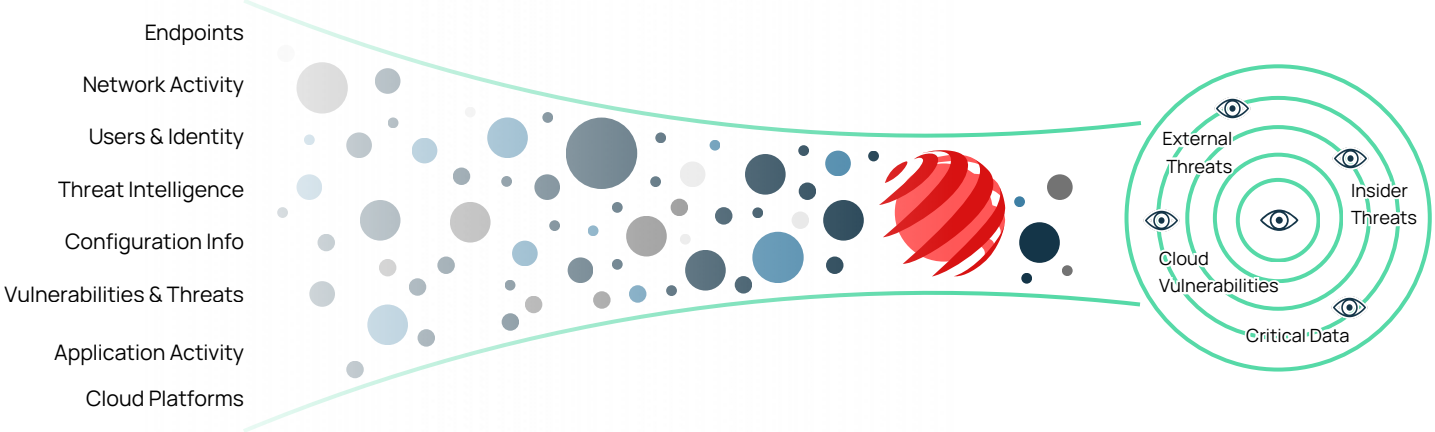
**6,200+**
Alerts Resolved by Our SOC Monthly

**10,000+**
Vulnerabilities Uncovered Monthly

**120+**
Australian Schools & Businesses Secured

### Threat Visibility at Scale

Lumara SecOps Cloud provides a unified view of your entire security landscape. By ingesting data from all your existing security tools, we provide the context you need to detect and respond to threats faster and more effectively.



# Context Without Chaos. An Immediate Response

## What It Does

Lumara SecOps Cloud provides a unified view of your entire security landscape. By ingesting data from all your existing security tools, we provide the context you need to detect and respond to threats faster and more effectively.

## Why It Matters

No more silos. No more blind spots. Just complete visibility across your environment.

## Our Unique Capabilities

### Aussie Built & Delivered

Built and delivered by Australian Cybersecurity Experts. Your data stays in Australia, monitored 24/7 from our Gold Coast SOC by analysts who understand the local threat landscape and regulatory requirements.

### Your Stack, Our SecOps

Built on open architecture and open standards. Integrates with your existing technology investments with no vendor lock-in, no closed walls, no forced limits.

### We Don't Rip & Replace

Lumara works with the security tools you have today and grows with your organisation as your needs evolve. When we work together, we work to expand on your technology investments.

### Extend When Ready

Add modular security extensions as your needs grow. Uses market-leading platforms that plug directly into the Lumara Fabric intelligence layer. Scale protection on your terms.

# The Lumara Architecture

## Lumara Fabric: Intelligence, Automation & Response

The Lumara Fabric is the core intelligence layer of Lumara SecOps Cloud. It weaves together signals from every corner of your digital estate (endpoints, cloud, network, and identity systems) to create a single, unified context for threat detection. This is where noise becomes signal, and complexity becomes clarity.

### Core Components of Lumara Fabric

**Intel: Continuous Threat Intelligence**

Adds current global and Australian threat intelligence to alerts, providing context on known threats, indicators and emerging attack techniques.

**View: Security Event Visibility and Analysis**

Connects and analyses security data across endpoints, networks, cloud and identity systems to identify patterns and provide a unified view for investigation.

**Signal: Security Analytics and Reporting**

Turns security activity into dashboards, trends, insights and reports for security analysts, technical teams and business leaders.

**Flow: AI-Enabled Automation and Orchestration**

Uses Fabric's connected intelligence to enhance triage, automate repeatable investigation steps, coordinate workflows and support authorised response.

## Lumara Operate: The Australian Advantage

Lumara Operate is the human-powered engine inside the Lumara SecOps Cloud. It's our dedicated team of Australian security analysts, engineers, and strategists, delivering 24/7 protection from our Queensland-based SOC.

### Four Pillars of Expert-Led Security

**Analyse: Australian Threat Analyst**

The Analyse function provides an analyst to your account. They bring deep context, proactive threat hunting, and tailored intelligence specific to your industry and environment.

**Command: Security Delivery & Analysis**

Our front-line team manages the day-to-day of your security, handling alert triage, investigation, and initial response so real threats are escalated and noise is filtered out.

**Counsel: Governance, Risk & Compliance**

Your strategic advisors, helping you navigate Australian compliance frameworks, manage risk, and align security with your business goals.

**Pathways: Security Roadmap Execution**

Turns strategy into action, working with you to build and execute a roadmap that drives measurable progress in your security maturity.

# Choose Your Level of Protection

Lumara SecOps Cloud is available in three tiers, each designed to meet different security needs and maturity levels. Every tier can be extended with modular technology and people extensions to match your unique requirements.

## Lumara Assure

### Core Protection

24/7 monitoring, alert triage, and confirmed threat escalation by our Australian SOC team. Includes baseline detection tuning, monthly reporting, and quarterly governance sessions to review SOC activity and response effectiveness.

## Lumara Fortify

### Advanced Defence

Assure plus a dedicated Australian analyst, monthly threat reviews, and scheduled detection tuning and targeted investigations. Monthly governance sessions ensure ongoing alignment on your risk posture, priorities, and evolving threat activity.

## Lumara Alliance

### Strategically Embedded

Full analyst integration with continuous threat hunting, incident response advisory, and strategic security alignment. Custom governance cadence delivers tailored executive reporting and collaborative security roadmap development.

# Extend When Ready. Scale At Your Pace

Lumara is built on open standards and is modular and extensible by design.

This inherent flexibility delivers a technology mix that you can augment, based on your needs with our next-gen Technology and intelligently designed People Extensions.

## How Extensions Work

Start with the Lumara Assure, Fortify, or Alliance service tier that fits your current needs, then extend as you grow. No forced, all-inclusive bundles. No rip-and-replace upgrades.

You choose what you need, when you need it. Just intelligent augmentation that scales with you. Plus, we deliver extensions and features others simply cannot. Each tier can be augmented with:

- **Technology Extensions** like Lumara Sentry (endpoint protection), Lumara Shadow (identity exposure protection), Lumara Shroud (communications security), or any of our other modular capabilities.
- **People Extensions** such as vCISO (strategic security leadership), vCOMP (compliance specialists), or DISP (defence industry security specialists).

# Lumara Extensions

Threats don't stay static. Add Australian technology and expertise that integrates directly into your Lumara SecOps service tier.

## Technology Modules

### Sentry

**Advanced Endpoint Protection**

AI-driven prevention, detection, and response for endpoints, powered by SentinelOne.

### Trace

**Advanced Network Detection & Response**

Enhanced network defence with intelligent detection and behavioural analysis.

### Shadow

**Identity Exposure Protection**

Monitors and protects against identity exposure in digital and dark web environments.

### Vault

**Data Resilience**

Immutable backups for rapid recovery of endpoints, SaaS, and cloud workloads.

### Immunity

**Advanced Vulnerability Remediation**

Continuously scans for vulnerabilities to prioritise and intelligently remediate.

### Shroud

**Communications Security**

Secure communications with encrypted, compliant collaboration tools.

### Portal

**Secure Browser**

Remote browser isolation with AI DLP to block web-based threats.

### Educate

**Security Awareness Training**

AI-powered phishing simulations and training to reduce human error.

## People Modules

### vCISO

**Virtual Chief Information Security Officer**

Executive-level security leadership without a full-time hire.

### Analyst

**Australian Security Analyst**

Australian analyst augmentation for threat detection and response.

### vCOMP

**NIST/E8 Pathway Specialist**

Translates Essential Eight and NIST for critical security compliance.

### DISP

**Defence Industry Security Program**

Ensure readiness for defence-related contracts.

# About Secure ISS

## Protecting Australians since 2006

### Australia is Secure when Australian talent defends it.

Secure ISS is a proudly sovereign cybersecurity and technology services provider. We are trusted by education providers, healthcare networks, local governments, and industry leaders across the country.

Since 2006, we've delivered expert-led solutions to protect our nation's most critical sectors. We believe that true security requires local context and a deep understanding of Australia's regulatory and threat landscape.

Reach out today to discuss how Lumara can help protect your business from the always-changing Australian threat landscape.

Sovereign 24 / 7 SOC run in Australia, by Australians

Developing Australian cyber talent with local partners

AI-driven security grounded in Australian values
