TouchDesigner · Arduino
Blender · Keyshot · V-Ray

OVERVIEW

I am a Designer who is motivated by a sense of curiosity and has a strong attention to detail. My approach involves carrying out user research, applying design thinking, and engaging in UI/UX and visual design, as well as prototyping and data-driven research, while also making use of AI-assisted design ideation, research, and UX writing. I apply solid project coordination and management abilities to produce experiences that are intuitive, functional, and emotionally engaging.
