RISK PROFILE

NAV per share will fluctuate, and any capital invested is subject to risk, including loss of the principal amount invested. The Fund uses leverage and derivatives for hedging and investment purposes, which amplify the returns, including loss (if any) and entail additional risks and costs. For further details, please refer to the Offering Documents.

PORTFOLIO UPDATE

During July 2026, the Fund's NAV was flat, bringing year-to-date returns to 4.38%. The Portfolio performance was broad based with no single constituent materially driving the change in NAV.

The Target Return Fund structure provides an inherent and progressive resilience: the declining maturity profile naturally reduces duration and spread sensitivity over time, independent of interim market dislocations.
