Profile

I design software **for people** who have to use it all day. My work sits in dense, **technical territory**: document processing, chatbot configuration, hiring pipelines, digital signing and my job is to make those workflows **feel obvious**.

Over the past year I've taken **seven enterprise products** from research through to shipped interface, and built the design systems that keep them consistent across web, mobile and back office.

Experiences

Fusion Solution

Apr 2025 - Present

UX UI Designer / Product Designer

Onsite • Full Time • Yangon

- Design **enterprise products** across document processing, chatbot configuration, hiring, digital signing and banking, taking each from research through to a shipped interface. **Seven so far** and counting.
- Design owner** of **DOVA** and **Veracity**, responsible for both products end to end and after release.
- Built and maintain **four design systems**: component libraries plus tokens for typography, spacing, radius and elevation, with density modes for web, mobile and back-office surfaces.
- Designed **seven responsive websites** for company and product brands, four of them live.

Practical English Club

Dec 2022 - Jan 2024

Graphic Designer

Remote • Full Time

- Developed **brand identity** and created marketing, social media designs, and campaign assets while maintaining a **consistent visual language** across platforms and **audience touchpoints**.

Freelance

2021 - Present

Graphic Designer & Digital Artist

Remote

- Created** logos, brand identities, advertising materials, posters, menu books, illustrations, and portraits for clients across Myanmar, managing projects independently from initial brief through **final delivery** and **client revisions**.

Featured Projects

Product design, end to end

DOVA, an AI document intelligence platform, and **Veracity**, a digital signature platform. Design owner of both: research, user flows, extraction and validation screens, signing and multi-step approval workflows, and the design system behind them.

Product design, with the team

Chat Framework, an enterprise chatbot builder redesigned from a design audit and user research so non-technical teams can configure and deploy assistants without code. **OptimisticHR** across 10+ modules, covering recruitment, the hiring pipeline and HR operations. **Digital Business Card System**, shaped from a single requirements document into flows, structure and screens; not yet released.

Client projects

LH Bank: three AI chat interface directions, including conversational flows, message interactions, chatbot animation and a lightweight animation for the bank’s main screen, with one selected for production. **DGA**: AI smart search interface and an animated chatbot.

Design systems

Four systems with component libraries and tokens for typography, spacing, radius and elevation, and density modes for web, mobile and back-office surfaces.

Websites

Seven responsive sites. **Fusion Solution**, **DOVA**, **Thetys** and **F-Tech Solution** are live; redesigns of **Jarviz**, **Veracity** and **SeedKM** are finished and awaiting release.

Skills

Product & UX

Product design • UX strategy • Information architecture • User flows • Wireframing • Prototyping

User Interface

UI design • Interaction design • Responsive website design • Visual design

Design Systems

Component libraries • Design tokens • Typography and spacing scales • Documentation • Token pipelines (Figma to code)

Research

User research • Usability testing • UX audits • Design QA

Tools

- Figma
- FigJam
- Canva
- Adobe XD
- Style Dictionary
- Storybook
- Photoshop
- Illustrator
