FACADES
SHEET METAL
TRENTEX

DESIGN / MANUFACTURE / INSTALLATION

Metalwork for your business.

Facades, bespoke metalwork and flexible shop closure systems.
For retailers, jewellers and shopfitters.

FROM A SINGLE COMPONENT TO A COMPLETE FACADE.

PORTEC METALLBAUSYSTEME / MÜNSTER

Three areas of expertise. One partner for your project.

01 / Facades and systems

Facades, windows, doors and shopfronts. Designed and manufactured to suit the architecture, intended use and site conditions.

Explore our systems

02 / Sheet metal fabrication

Laser cutting, folding, V-cutting and surface finishing. For our own metalwork solutions and components made to your drawings.

Explore sheet metal fabrication

03 / Trentex

Shop partitions and textile roller doors for areas with different opening hours. We select the system and material to suit your space.

Explore Trentex

Your retail concept. Crafted in metal.

Bucherer: metal cladding, display windows and entrance working together.

Your store should reflect your brand and work well every day. PORTEC designs, manufactures and installs facades, shopfronts, door systems and bespoke metal components.

Whether you need a new entrance, individual metal components or a complete facade, we work with you to agree the design, function and scope of work.

Since 1995

Bespoke metalwork

Münster

In-house manufacture

From concept

to installation

Every address.
A character of its own.

01 Snipes: corner shopfront and entrance in an urban setting

02 Wempe Berlin: entrance and display windows

03 Shop window in an existing facade

A welcoming entrance. Planned in every detail.

From our project portfolio:

Entrances and display windows in harmony.

Facades and shopfronts

Profiles, glazing and cladding shape the appearance of your store. We develop the construction to suit the architecture and site conditions.

Doors and entrances

Hinged doors, automatic sliding doors, folding and sliding entrance systems: the right opening mechanism depends on access, use and design.

Materials and finishes

Steel, stainless steel, brass, aluminium and glass. Profiles, junctions and finishes are coordinated with your design.

Security planned for your project.
Requirements and suitable specifications are agreed for each component and installation.

Quality shows in every edge.

Defined edges and coordinated metal surfaces.

V-cutting and folding

V-cutting allows us to form sheet metal with a crisp edge detail. The process suits decorative metal components in stainless steel, brass, steel or aluminium.

Coordinated finishes

Cold patination creates a range of bronze tones on brass components. The finish, colour and junction details are coordinated for each project.

For shopfitting: Cladding, cover panels, profiles and bespoke metal components can be coordinated with facades and entrances to create a coherent whole.

Bespoke sheet metal. Made for your design.

From programmed cutting to the next stage of fabrication.

Made to your drawings

We manufacture sheet metal components for facades, shopfitting and other applications. Design, programming, fabrication and finishing work together at PORTEC.

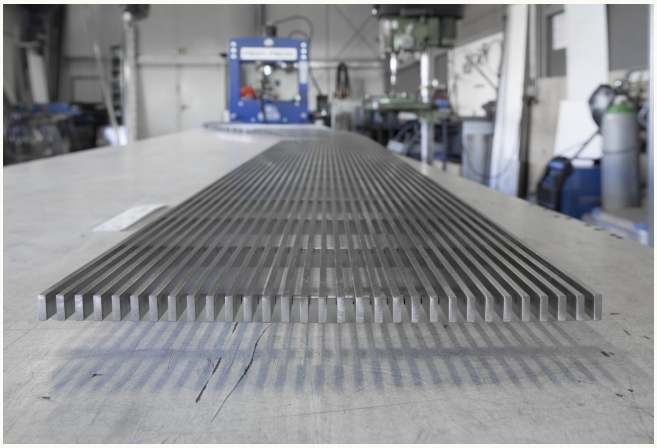

The right process

Laser cutting, folding, V-cutting, shearing and patination. We select the process to suit the material, geometry and finish.

Contract fabrication: Need individual metal components for your project? Send us your drawings, material specification, quantities, finish and required date.

From the detail to the finished component.

Design and manufacture under one roof.

Our capabilities include laser cutting, folding, V-cutting, patination and further fabrication. We manufacture for our own systems and on a contract basis.

One area closes.
The rest stays open.

Trentex by PORTEC closes off indoor retail areas while neighbouring spaces remain in use. For individual stores and projects across multiple locations.

Open: access remains clear.

Closed: the area is separated.

Open and store to the side

The curtain follows a ceiling track and retracts into a side cabinet. The track can also run around corners. No floor track is required.

Different opening hours

For shops, kiosks, supermarkets and shopping centres, the design and installation are tailored to the space. The shop partition is available in lengths of up to 30 m with one cabinet.

Worldwide delivery

With PORTEC installation or supply only.

Explore systems and installation

Dimensions and specification subject to project review.

The right solution for your opening.

Trentex smart

Pull across, secure and tension. For straight openings up to 7 m, without continuous ceiling or floor tracks. The cabinet and fixing point are positioned at the sides.

Textile roller door

The curtain rolls up above the opening and runs in side guides. Standard sizes up to 7 m wide and 4.5 m high. Custom printing is also available.

Materials to suit your needs.

Black, silver-grey or printed.
Black mesh retains visibility. Silver-grey reduces the view through. Custom printing allows the closure to complement your store design.

protect and protect light.
Stainless steel mesh or a flexible, cut-resistant fabric extend the material options. Suitability and combinations are assessed for the chosen system.

From your idea to the finished solution.

Whether you need a facade, an individual metal component or a shop closure, we define the brief and next steps together. The result is a scope of work tailored to your project.

01	**Discuss your project**	We discuss your goals, location, site conditions and schedule. An initial sketch or elevation provides a useful starting point.
02	**Develop the details**	We agree materials, construction, finishes and connections as the basis for the proposed specification.
03	**Receive your quotation**	You receive a quotation for the agreed scope, setting out the specification, delivery and installation.
04	**Manufacture to order**	After your order and approval, we prepare production drawings and manufacture your components in Münster.
05	**Deliver and install**	Delivery and installation follow the agreed scope. We remain available for maintenance and repairs.

Your idea is enough to get started.

Plans, dimensions and material preferences are welcome, too.
