ProteinIQ

OUR MISSION

To empower food companies to unlock the full value of their data and expertise—giving every team the clarity to make better decisions, improve operations, and turn knowledge into measurable results.

A practical path **to value**

01
Start with a meaningful business problem.

02
Test the results with your experts.

03
Measure the improvement.

04
Expand from what works.

INTELLIGENCE BUILT AROUND YOUR BUSINESS

Put everything your business **knows to work.**

WHAT WE DO

Your company's knowledge lives in its people, systems, documents, and spreadsheets. ProteinIQ brings it together through AI knowledge grounded in your industry and the way your business works.

We identify where AI can create value, connect the information it needs, and put it to work in daily operations—so teams can find answers, improve processes, and preserve hard-earned expertise.

> **This is only possible because our team has over 300 combined years of experience in food processing.**

How do you make AI useful in your business?

With your data, your definitions, your processes—and the right access for your people.

.01 Your data, connected and secured.

Bring together information spread across systems, documents, and spreadsheets so teams can use more of what your company already knows.

Know that your data is safe with our military-grade security.

.02 Your business, understood.

Ground AI analytics in your terminology, calculations, operating rules, and industry context so its answers reflect how your business actually works.

.03 Your processes, supported.

Focus on work that matters: answering operational questions, investigating performance, reducing repetitive tasks, and making better-informed decisions.

.04 Your people, equipped.

Make relevant knowledge available to the people who need it, with appropriate permissions and human review where decisions require judgment.
