

INTRODUCING **TOR-BAC**

A D V E R T O R I A L

Alison Stevenson Managing Director & Head of R&D at Tor-Bac explains why this single dose product has grown in sales year-on-year since it's inception 2018 to the UK market

Stevenson explains, ***"Practitioners offering injectable procedures are familiar with using bacteriostatic saline to reconstitute medicinal products for intramuscular or intradermal injection."***

Tor-bac is a preserved bacteriostatic saline solution, containing both sodium chloride 9mg with 0.9% (9mg/ml) benzyl alcohol, which provides both bacteriostatic protection and reduced injection site pain, compared to ordinary saline. Indeed, evidence supports that since 1928, there have been more than 60 studies which have reported in favour of bacteriostatic saline for significantly lower pain scores when there has been benzyl alcohol present in saline.

Tor-bac as a 5ml SINGLE use ampoule is both easy to use and to transport between clinics. As a high-quality product manufactured within a Medicines and Healthcare products Regulatory Agency (MHRA) approved facility within the UK, it is designed to maintain sterility and prevent bacterial growth in multidose settings.

A 5ml single dose Tor-Bac ampoule is favoured by practitioners for both its ease of use as a diluent with botox and other dry powder presentations for reconstitution. This single dose product provides the confidence in all practitioners who use Tor-Bac to know due to the high quality of manufacture, traceability. Its single-dose usage makes this a natural product safety feature as it negates any fear of cross contamination which cannot be said of any multi dose saline product on the market.

Further evidence supports the use of preserved saline (Tor-Bac), for periocular injections including botulinum toxin type A and local anaesthesia. The evidence for the lowered pain scores using bacteriostatic saline in delicate areas of skin around the eyes and eye lids also take this product into other areas of medicinal preparations which also cannot be overlooked, we have supported this sector and continue to see growth in it. This is also true in the male health sector, as well as continued growth in aesthetics usage generally.

An interesting fact about benzyl alcohol itself is that it is a naturally occurring aromatic alcohol, found in plants such as Jasmine and is also present in foods and cosmetics. It has both anaesthetic and bacteriostatic qualities, contributing to its' effectiveness in reducing pain and maintaining sterility during injectable procedures.

Aesthetic nurse prescribers feedback has been very positive over the years since we introduced Tor-Bac, stating, "Since a single patient treatment rarely requires more than 5ml of saline to reconstitute a single vial of toxin, either practitioners of wasting 5ml or 25ml or they are in breach of regulations by reusing multi dose vial on multiple patients. As such Tor-Bac SINGLE dose offers a valuable solution!"
