with live data from **izon**

izon gives you the power to truly understand and reduce your energy costs

Energy use is constant and costly but often poorly understood. Without real-time insights, inefficiencies can greatly affect the bottom line.

Common challenges for industry

- Machines idling between shifts
- Spikes during certain products or shifts
- Ageing equipment using more energy
- Reporting delays make fast action difficult

izon helps you save by delivering

- Live data by machine, line or shift
- Alerts for abnormal usage and inefficiency
- Operational benchmarks and comparisons
- Actionable insights

STATUS OKAY

Built for real-time action and savings

Insights based on real events

Link energy spikes to events like changeovers or stoppages. See the real cost of every action.

izon

STATUS OKAY

Maintenance triggered by usage hours

Track device runtime to schedule servicing based on actual load. Reduce unplanned downtime and extend asset life.

Real-time alerts

Instant notifications for abnormal usage or faulty behaviour. Fix issues early to avoid costly downtime.

The izon dashboard presents real-time data which enables your team to make faster decisions that actually save money.

Benchmark & compare

See how different machines, lines or shifts consume energy. Spot inefficiencies, set standards and reduce waste.

Eyes on your assets 24/7

Dashboards show live site activity, enabling your team to make faster, more prudent decisions.
