

It Just Works

How Stanbrick replaced siloed imaging systems with one consistent cloud-based experience

Tor Boyesen
Infrastructure Manager,
Stanbrick Dental Group

AT A GLANCE

**Stanbrick
Dental Group**

10

Practices + Specialty
center

Integrated with
Pearl AI

Runs
on CareStack
PMS

The Challenge

As Stanbrick grew to 10 practices and a specialty center, every office ran its own on-premise software and local servers — creating silos that slowed care and buried IT in daily fire drills.

On-premise silos

Image sharing meant exporting, emailing, or remoting into idle computers

Integration gaps

Imaging never fully synced with CareStack, scattering patient data

IT overload

Mismatched sensors and endless support tickets left IT firefighting instead of planning for growth

"If a GP sent a patient to the specialty center, you had to literally hunt down a free computer just to pull up an image. It was painful."

Tor Boyesen, Infrastructure Manager, Stanbrick Dental Group

The Approach

Stanbrick rolled out SOTA Cloud across the DSO — reducing on-premise servers and unifying imaging on a single platform compatible with existing sensors. Native CareStack integration kept records and images in sync, centralized user accounts gave staff consistent access everywhere, and offline capture kept imaging moving even during internet outages.

Always-On AI with Pearl

Before SOTA Cloud, AI adoption was inconsistent — clinicians had to manually launch tools, so it often went unused. Now Pearl runs automatically in the background on every image — no extra clicks, no uploads, just instant insights at the point of care.

"Doctors don't have to think about running AI. They just focus on dentistry, and the software takes care of the rest."

Tor Boyesen, Infrastructure Manager, Stanbrick Dental Group

The Results

Instant image sharing across all locations — no more exports, emails, or remote sessions

IT freed from daily firefighting to focus on growth planning

Pearl AI embedded into every patient visit without adding steps for clinical staff

Consistent workflows across all 10 practices and the specialty center

"It has all the tools and it just works."

Tor Boyesen,
Infrastructure Manager, Stanbrick Dental Group
