

Sustainable Procurement Policy

(PPP031)

Sustainable Procurement Policy

1 Introduction

At Papilo Ltd, sustainability is at the heart of how we operate. This policy sets out how we will integrate sustainability into every procurement decision, ensuring that we consider environmental, social, and economic factors in everything we purchase. We are aligned with key international standards, including ISO 14001, and ISO 9001, to ensure our procurement practices reflect our commitment to responsible business.

2 Scope

This policy covers all procurement activities within Papilo Ltd, including the purchasing of goods, services, haulage and equipment. It applies not only to us but also to our suppliers, contractors, and any partners involved in our supply chain. We expect everyone involved to help us meet our sustainability goals.

3 Objectives

Our primary goal is to incorporate sustainability into every aspect of our procurement processes. We aim to build strong, long-term relationships with suppliers who share our values around environmental responsibility and economic sustainability.

Our role in the waste management industry gives us the opportunity to lead the way in demonstrating sustainable procurement practices.

4 Principles of Sustainable Procurement

When making procurement decisions, Papilo Ltd is guided by several core principles. Environmental responsibility is a priority. We seek to work with suppliers who are committed to reducing their environmental impact. This means choosing suppliers who use eco-friendly materials, minimise waste, and are involved in innovative waste management practices that align with our goals.

Social responsibility is equally important. We are committed to working with suppliers who uphold high standards when it comes to labour practices and human rights. This includes ensuring fair wages, safe working conditions, and respect for diversity and inclusion. We also avoid any suppliers who are involved in unethical practices.

Economic sustainability is a key consideration for us. We aim to make procurement decisions that offer long-term value. This involves balancing cost-efficiency with the sustainability and quality of the products and services we procure. Supporting local suppliers where possible is important to us, as is maintaining fairness and transparency throughout the procurement process.

5 Supplier Relationships

At Papilo Ltd, we believe that strong relationships with our suppliers are essential to achieving our sustainability goals. We expect our suppliers to meet environmental, social, and economic standards that align with our own values. We are committed to working together on sustainability initiatives, such as reducing waste, reducing CO2 and promoting eco-friendly solutions for our customers.

Collaboration is key, and we seek to work with suppliers who are open to exploring new and innovative ways to enhance sustainability within the supply chain.

6 Managing Risk & Compliance

We take a proactive approach to managing risks related to sustainability within our procurement processes. This involves conducting thorough due diligence on our suppliers to ensure they meet our standards.

We regularly assess and manage risks, particularly in areas where there is a higher chance of environmental or social breaches. If a supplier fails to meet our standards, we act quickly to address the issue and ensure they comply with our requirements.

7 Continuous Improvement

Sustainability is a constantly evolving field, and we are committed to improving our practices over time. We regularly review our procurement processes to ensure they stay in line with the latest sustainability developments. By continuously learning and adapting, we can make sure that our procurement practices remain aligned with our long-term goals.

8 Conclusion

Sustainable procurement is central to the way we do business at Papilo Ltd. We are committed to ensuring that everything we procure supports our wider sustainability goals. By embedding sustainability into our procurement decisions, we aim to create positive impacts across our supply chain and contribute to a more sustainable future.
