CORE SERVICES

At VIC Concrete Polished, we provide complete concrete flooring and surface preparation solutions tailored to residential, commercial and industrial projects. From initial floor assessment and preparation through to the final finish, our experienced team delivers durable, practical and visually appealing flooring systems designed to suit each clients requirements.

1. MECHANICAL POLISHED CONCRETE

A low-maintenance multi-layer polishing process that involves mechanically grinding, honing and polishing all concrete surfaces with bonded abrasives.

2. GRIND AND SEAL

This method uses a layer of resin or sealant to complete the polish. The result is a smooth finish that adds an extra layer of protection for various weathers, making it cost-effective and built to last.

3. EPOXY-RESIN

Epoxy flooring is built for the tough; its hardwearing resin coat is designed to withstand heavy impact and pressure of constant foot traffic. Anti-slip additives make it as safe as it is strong. Perfect for warehouse, factories, high-traffic residential and commercial spaces.

4. DECORATIVE FLAKES COATING SYSTEM

A multi-layer finish is applied directly over your existing concrete. Coloured flakes are embedded into a resin epoxy base, then sealed with a clear protective topcoat, creating a textured, slip-resistant surface. A popular choice for those looking to elevate their residential or commercial space.

5. FLOOR PREPARATION AND MEASURING

We provide professional floor levelling across Victoria, correcting uneven and damaged surfaces. Ideal for fixing uneven or damaged surfaces before laying tiles, carpet, or vinyl, or simply making your space safe and hazard-free.
