

# You have only **seconds** to determine if a potential threat is entering your school premises.

**GRIFFIN365 needs less than 5 seconds to detect the threat and send you an Alert!**

**ALERT TO MOBILE PHONE WITH IMAGE + LOCATION**

This is all achieved without the need for additional personnel. GRIFFIN365 operates 24/7/365 using existing resources, eliminating the issues associated with human monitoring.

**You've already invested in camera equipment. Now, let's maximize its potential!**

**Let our software, the A.I., do the work for you, for a safer future for everyone.**

-  Stop threats before they escalate! We detect handguns, long guns, knives, and more, giving you crucial seconds to respond.
-  Control who enters your space. Our system identifies unwanted individuals, keeping your premises secure and your people safe.
-  Unmask potential threats. Our system detects those hiding their faces, discouraging illegal activity and ensuring transparency.
-  See what's happening when it happens. Our system alerts you to fights, loitering, and people in distress, enabling swift action and enhancing safety.
-  Leave nothing to chance. Our system spots unattended objects and suspicious packages, providing an extra layer of protection against potential harm.
-  Hear danger before it's too late. Our system recognizes the sounds of gunshots and distress, empowering you to take action and potentially save lives.
-  Don't let threats hide. Our advanced technology sees through concealment, revealing weapons others can't.

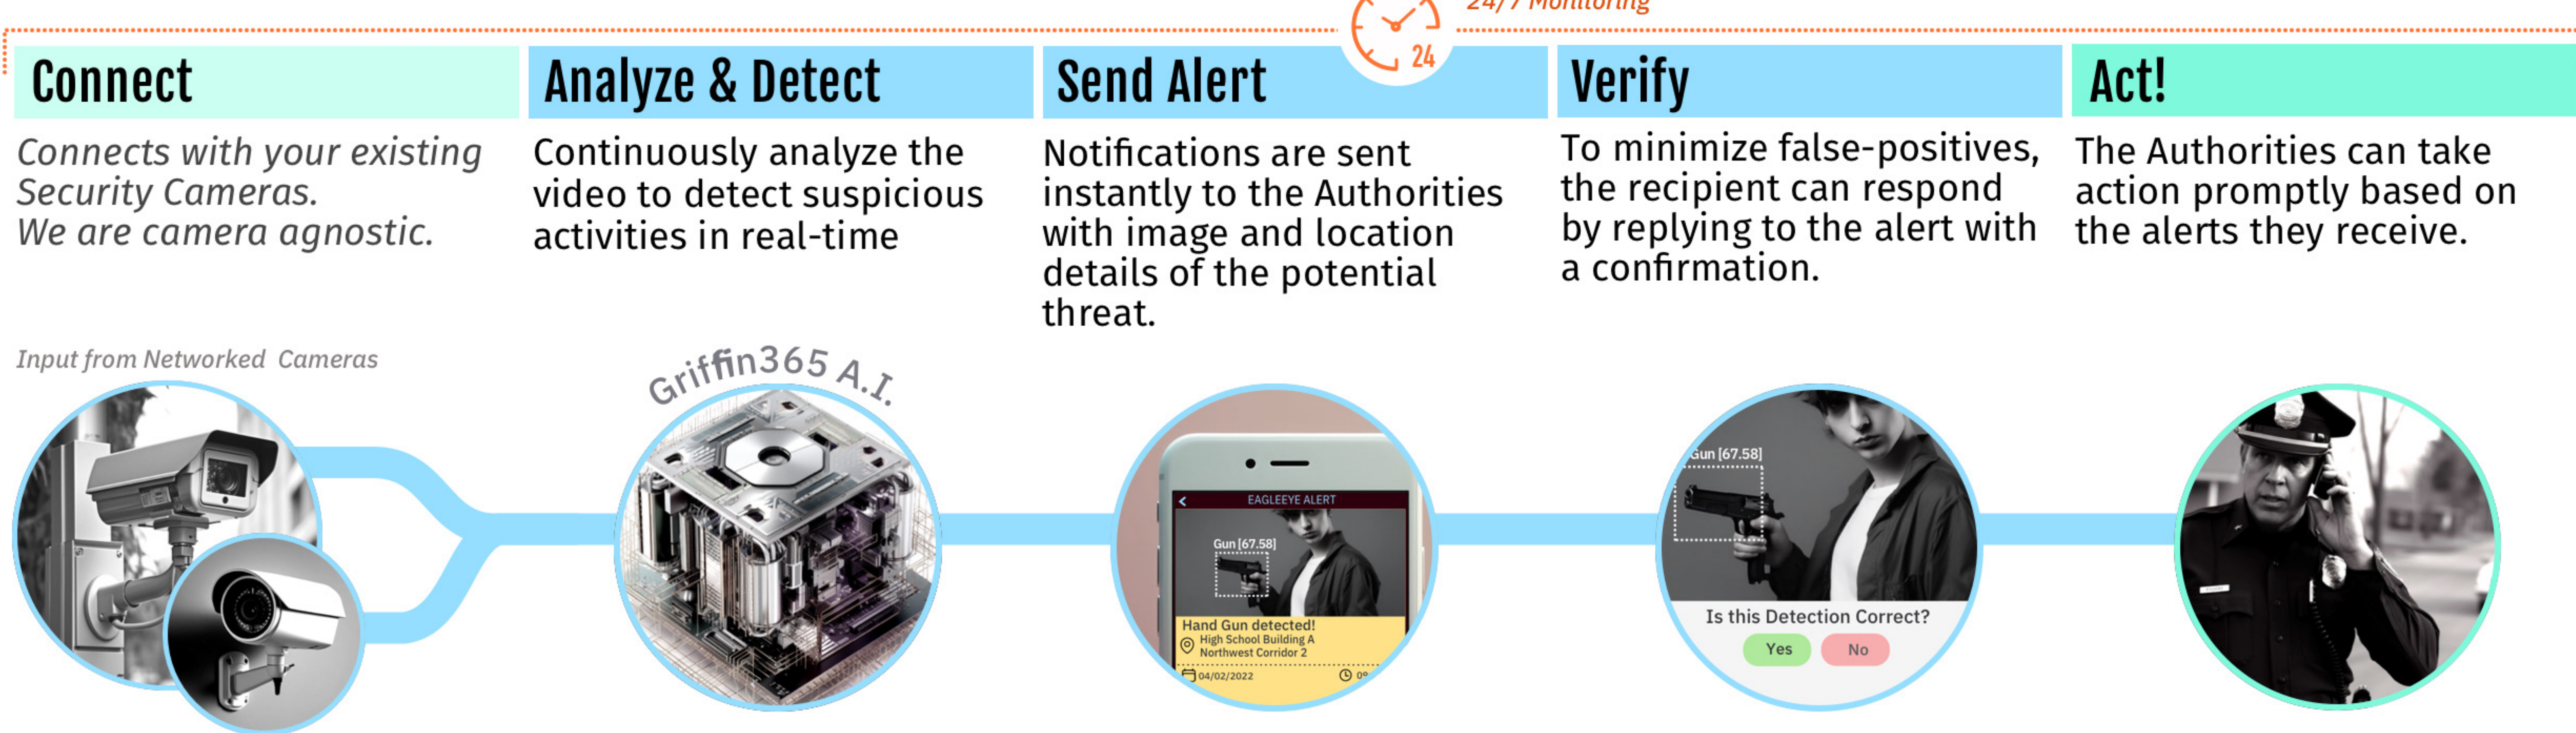

## Customization for Specific Needs

We can monitor specific conditions based on the client's needs. Currently, we are tasked with detecting baseball bats and opaque backpacks. Furthermore, we are identifying clothing associated with gang members and preventing their access to a school campus. We will create and train the A.I. to detect and alert for these unique situations.

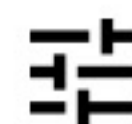

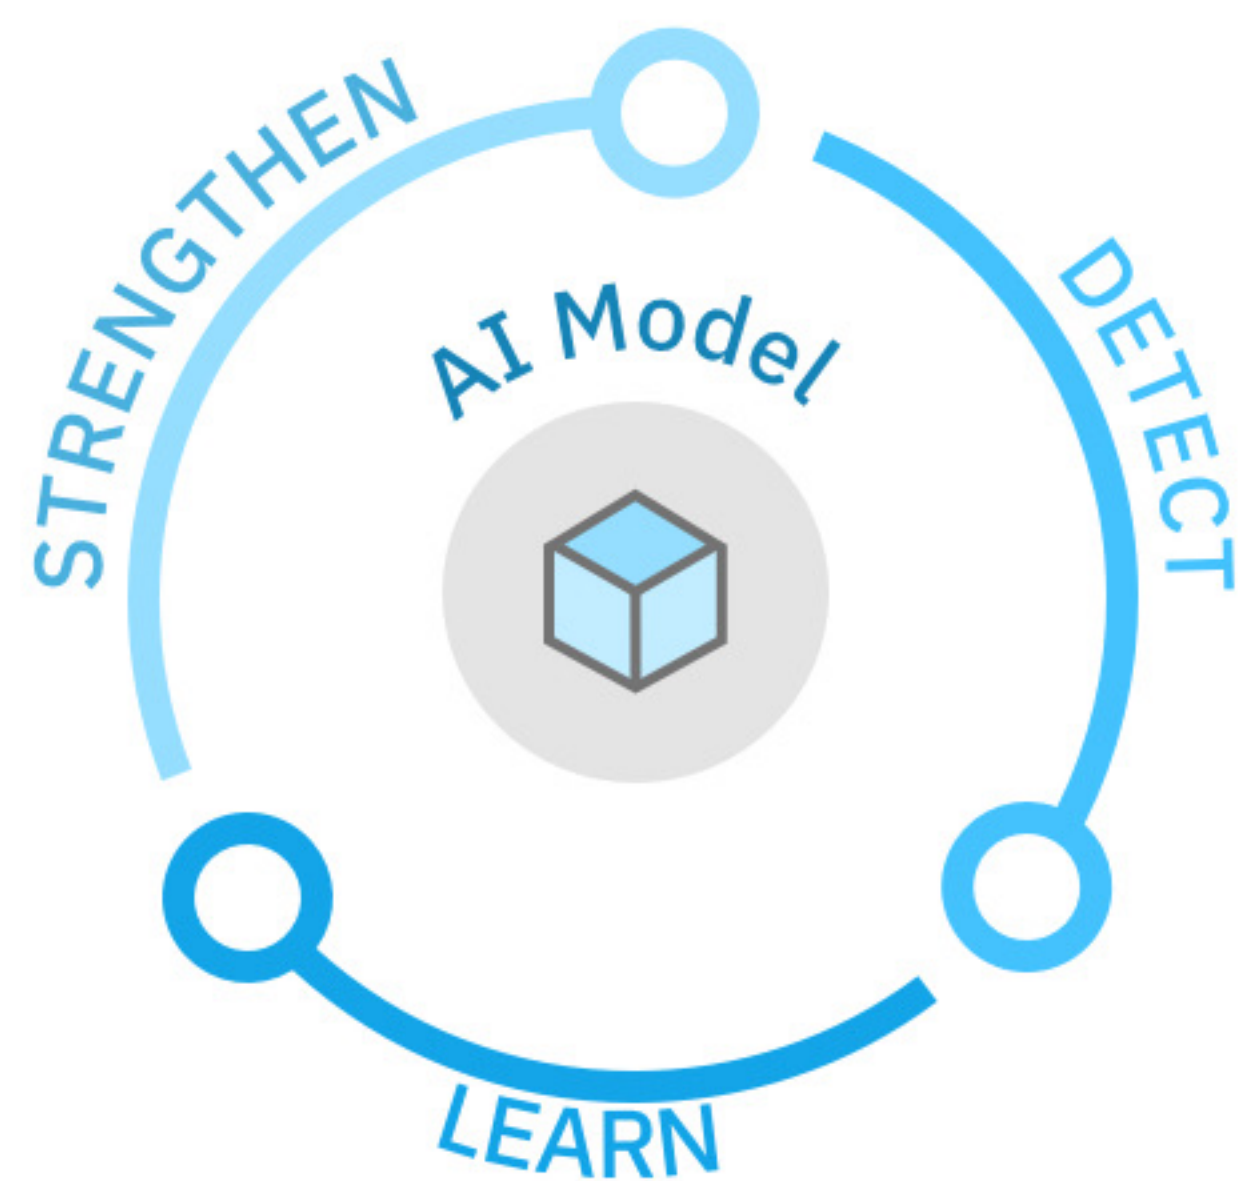

-  SMS/Text
  -  WhatsApp
  -  MS-Teams
  -  Slack
  -  Raptor Tech
  -  K12 Insight
  -  Audio Enhancements
- Alerts can be sent to messaging systems and also panic alert systems so it can initiate lockdown procedures.

## How GRIFFIN365 works ...

## Why GRIFFIN365?

-  Seamless Integration with Your Existing Digital Security Cameras. No Propriety Hardware is needed.
-  Customize A.I. for your specific needs or unique situations.
-  Proactive, Faster, and Precise Security using automation. Manual Monitoring of your security cameras is impractical and expensive.
-  24/7 Human Verification, if required, is configurable based on the type of threat.
-  A user-friendly application for configuring who receives notifications based on the threat and severity.
-  Preference on the method of notification: SMS, email, mobile app notifications, and more.
-  **Self-Learning Strategy :** Employs an automated adaptive learning strategy, continually enhancing its overall accuracy.

 **Protecting Your Privacy.** GRIFFIN365 does not retain any of your personal data. We hold a deep regard for your privacy and exclusively identify suspicious incidents to ensure the safety and security of all.

## Our Process. Tailored for You

We know that security needs differ and may require customization. Our approach is simple:

- 1 Assess and Understand what you Need**  
*Depending on the campus layout, entry points, and other requirements, we will tailor a solution that meets your needs.*
- 2 Propose a Solution & Recommendations**  
*Provide options that will best suite your needs and security concerns.*
- 3 Provide Costs and Implementation Time Estimates**  
*A detailed statement of work with total cost and implementation timeline.*
- 4 Implement and Setup GRIFFIN365 Application**  
*Setup the EagleEye software and camera integration based on the SOW.*
- 5 Configure & Customize for client's needs**  
*Train the users and configure the threats and notification options based on client needs.*
- 6 Continues Improvements and Support**  
*System monitoring, improvements, enhancements. Ongoing support.*
