Euclid Trading Systems welcomes two Trafigura veterans as strategic partners

Geneva, Switzerland - July 2026

Euclid Trading Systems, a Swiss multi-commodity trading and risk management software company, announces that Christophe Salmon and Nicolas Marsac have joined the company as strategic partners, shareholders, and members of the Board of Directors.

“Having Christophe and Nicolas join us as partners is a strong endorsement of our long-term strategy,” concludes Bertrand Keller. “Together, we are delivering a flexible, sovereign platform engineered for the complexities of real-world trading.”

Institutional governance and strategic vision

The involvement of Christophe Salmon (Strategic Partner and former Trafigura Global Group CFO) and Nicolas Marsac (Strategic Partner and former Global Head of Structured and Trade Finance at Trafigura) reinforces Euclid's positioning as a trusted player in the commodity trading industry. In a joint statement, the partners highlighted the critical importance of Euclid's technological approach:

“Institutional trading requires a level of data ownership that the mainstream market has yet to fully address. Euclid's commitment to private AI ensures that a firm's proprietary data never leaves its own infrastructure. Together, we are delivering the institutional rigour and data privacy required to move beyond the inertia imposed by legacy systems. As partners, we are committed to ensuring Euclid remains a sovereign alternative that restores operational control in days, not months.”

The Board of Directors

Bertrand Keller: Founder and CEO (25+ years experience, ex-Gunvor).

Arthur Keller: Board Member (AI development and strategic continuity).

Nicolas Marsac: Strategic Partner and Director (former Global Head of Structured and Trade Finance, Trafigura; previously CFO, Asia Pacific).

Christophe Salmon: Strategic Partner and Director (former Global Group CFO, Trafigura).

About Euclid Trading Systems

Headquartered in Geneva, Switzerland, Euclid Trading Systems is a Software-as-a-Service (SaaS) company delivering a sovereign, modular, AI-driven CTRM platform for institutional trading firms. Built on the principles of sovereignty, intelligence, and transparency, Euclid enables trading organisations to maintain full control across their trading, risk, and financial lifecycle.

Euclid's platform is designed around a unified architecture that combines core operating principles with a forward-looking technology roadmap:

Sovereignty: Client data remains strictly within the firm's own infrastructure, deployed on client-owned infrastructure or inside Euclid's private Swiss datacenter, ensuring full compliance with regulatory requirements including FADP and GDPR.

Intelligence (private AI): Euclid runs a locally deployed, private AI suite that operates entirely within the client's environment. Today it automates document data integration across 50+ formats and natural-language querying of the CTRM database. The same private AI layer is the foundation for broader automation across Trading, Risk, Operations, Finance, and Management.

Transparency: A fully auditable system with clear, traceable data flows that eliminate P&L opacity. All risk logic and pricing mechanisms remain visible, explainable, and verifiable.
