

ERA4 | FACTSHEET

THE MILL, NEWPORT, SOUTH WALES

Era4's latest flagship digital campus providing
British AI for British prosperity.

Location:	Newport, South Wales. A 230-acre site / 1.6km former steel plant
Capacity:	1GW+ peak power on build out / 400,000+ GPUs (NVIDIA VR200 or equivalent)
Timeline:	Phase One operational in 2027
Cooling:	Advanced closed-loop water cooling

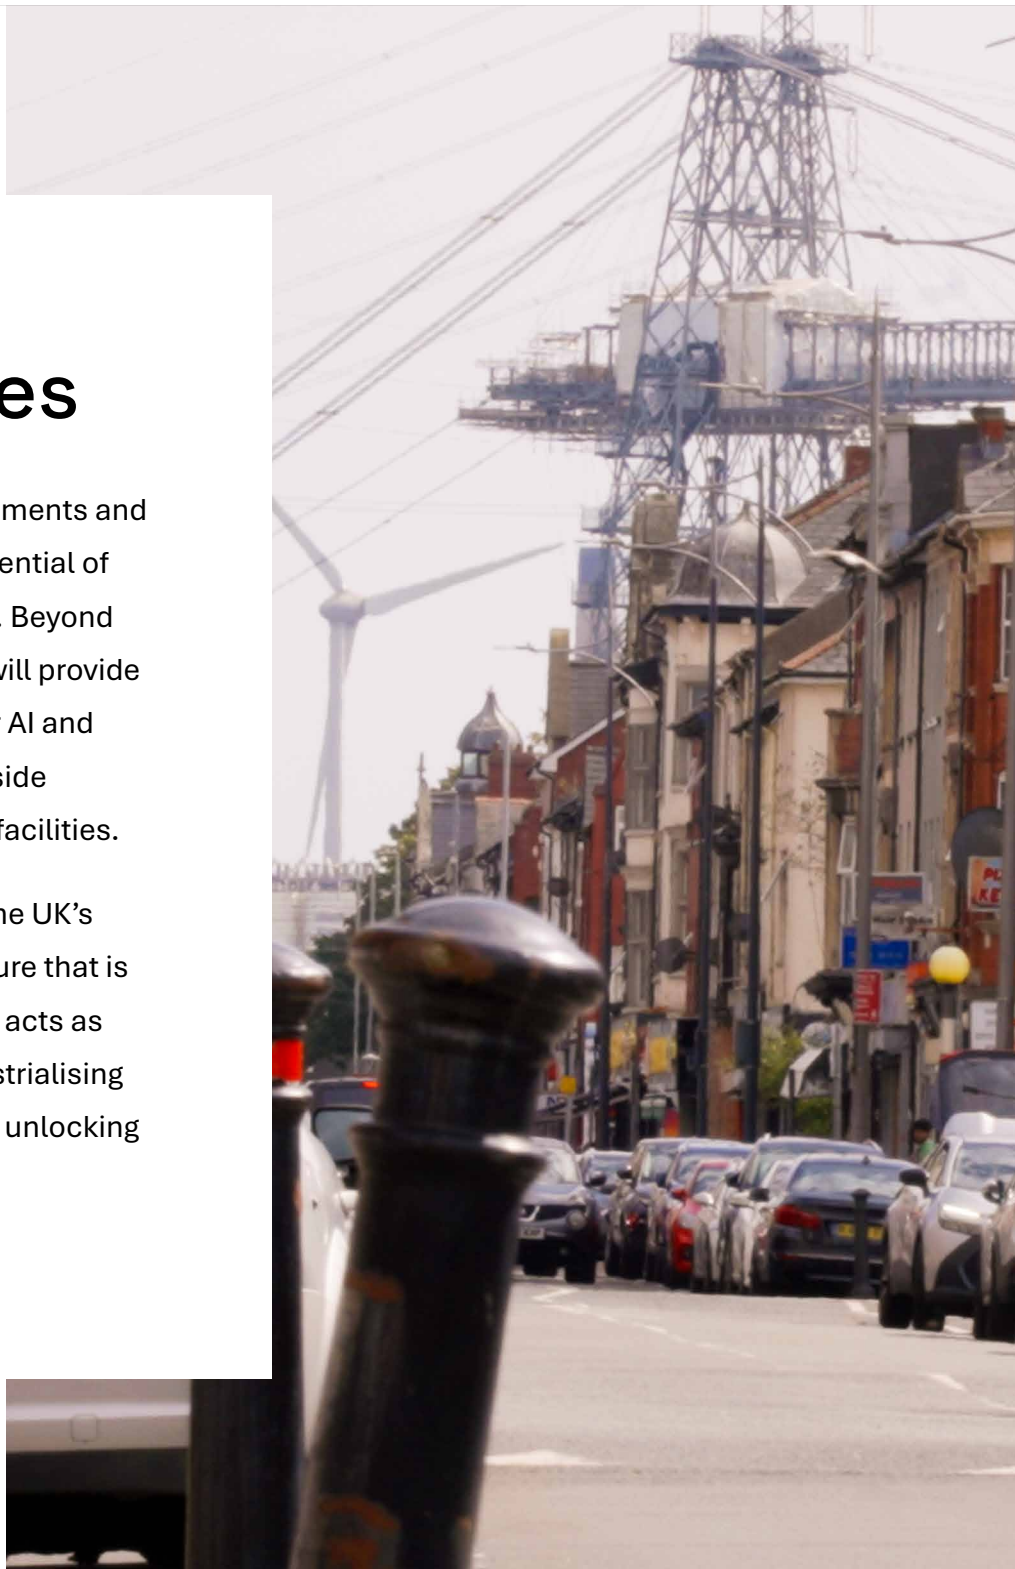

Regenerating the Future

Located in Newport, South Wales, The Mill builds on the region's deep-rooted industrial heritage. Across the 230-acre site, Era4 is reforging the 1.6km-long steel plant into vital AI infrastructure, delivering the sovereign compute capacity required to power the UK's AI future.

Key Features

Era4 partners with local governments and communities to realise the potential of the fourth industrial revolution. Beyond compute, this digital campus will provide an on-site technical college for AI and digital engineering skills alongside community sports and leisure facilities.

This digital campus supports the UK's need for resilient AI infrastructure that is UK-owned and UK-governed. It acts as a scalable blueprint for reindustrialising brownfield land across the UK, unlocking prosperity from the ground up.

About Era4

Era4 is building the sovereign infrastructure foundation for AI in the UK. Bringing together land, energy and compute into a single, controlled system, Era4 develops and operates the critical infrastructure needed to support the next generation of AI. With strategic sites across the UK, growing energy capabilities and a focus on UK-based, UK-governed infrastructure, Era4 is helping deliver the compute capacity required to power the country's AI future.
