Understand the impact of your secrets

Who created the secret? What resources can it access? What permissions does it have? TruffleHog Analyze is here to help you understand the impact of your secrets.

Simplified credential analysis

With TruffleHog Analyze, all the metadata, resources, and permissions are self-discovered directly from the secret without you needing to set up yet another integration.
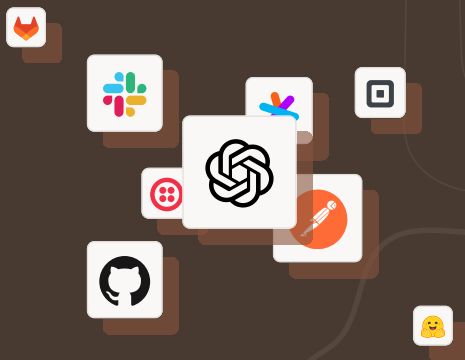

20+ key types supported and growing

TruffleHog Analyze supports more than 20 of the most frequently leaked secret types, with more added regularly.
