

Cat Safe Plants

Avoid toxic plants in your home while delighting those felines that like to munch and crunch. Catnip, wheatgrass, Boston fern, spider plant, and bamboo will encourage exploratory behavior and play. Cats may nibble on plants for various reasons, such as boredom, curiosity, or nutritional needs. Providing your cat with cat-safe plants can satisfy their natural urge to chew and provide them with vitamins, minerals, and fiber. Cat-safe plants can also purify the air, add beauty to your home, and create a more natural and stimulating environment for your cat.
