

# Connect Marketplace

## Accelerate Financial Innovation with Pre-Built Connectors

*The library of ready-to-use APIs that speeds fintech adoption, core connectivity, and data integration for financial institutions.*

### What It Is

Connect Marketplace is the **growing library of pre-built APIs and connectors** available within the PortX Platform. It gives banks, credit unions, and fintechs a head start by eliminating the need to build integrations from scratch, dramatically reducing project timelines and costs.

Every connector is built to **financial institution-grade standards** and is reusable across projects, making it easier to adopt new fintechs, modernize operations, and unlock data across the enterprise.

### Why it Matters for Financial Institutions

|                                                                                                                |                                                                                        |
|----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
|  Faster Time to Value.      | Replace months of custom development with pre-built, reusable connectors.              |
|  Broader Access.            | Connect instantly to leading fintechs, cores, CRMs, LOS, payments, and data providers. |
|  Standardized Integrations. | Ensure consistency, accuracy, and compliance with governed connectors.                 |
|  Lower Costs.               | Reuse proven connectors instead of rebuilding one-off integrations.                    |
|  Future-Ready.              | Marketplace continues to grow with new fintech, payment, and data partners.            |

## What it Does

### Speeds Fintech Onboarding.

Quickly connect with partners for digital banking, lending, payments, and more.

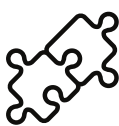

### Simplifies Core Integrations.

Leverage **ORCA (Open Reusable Core APIs)** to connect with all major cores.

### Expands Data Access.

Includes connectors to external data sources for richer insights.

### Integrates Seamlessly.

Works directly with Integration Manager, Data Manager, and Payment Manager.

### Unlocks Innovation.

Institutions can launch new fintech products faster and with less risk.

## Key Features

|                       |                                                                     |
|-----------------------|---------------------------------------------------------------------|
| Pre-Built Connectors. | For leading fintechs, cores, and data providers.                    |
| Reusable APIs.        | Build once, reuse across multiple projects and teams.               |
| Governed Marketplace. | Curated, secure, and maintained by PortX.                           |
| Open Standards.       | Built on JSON/REST and aligned with FDX, BIAN, and CUFx frameworks. |
| Continuous Expansion. | Regularly updated with new partners and integrations.               |
