

Great care deserves a chart that proves it.

Sayvant works across the whole stay to capture clinical reasoning, assess documentation against quality guidelines, and ensure every signed note is valued appropriately.

THE SAYVANT PLATFORM

Sayvant improves note quality.

CLINICAL

The thinking behind the care

Notes reflect the clinician's actual reasoning and the complexity of the visit, across the whole stay from ED through discharge.

- Assembles the clinical picture from ambient listening, dictation, and EMR data
- Surfaces differentials and workups for high risk chief complaints
- Drafts full EM and HM notes

RESULT

Notes are done on shift and the oncoming physician has a full clinical picture.

QUALITY & RISK

Held to evidence-based standards

Every diagnosis and plan is checked against clinical evidence and guidelines, with potential gaps flagged.

- Surfaces best practices from trusted sources like CMS, ACEP, and BMJ
- Flags missing pertinent information, from re-evaluation time stamps to lab and imaging interpretations
- Reviews medical necessity and clinical appropriateness at admission

RESULT

Notes withstand quality reviews with improved adherence to desired measures.

FINANCIAL

Valued for the care delivered

Documentation follows reimbursement guidelines: medical necessity, diagnosis specificity, and complexity of care.

- Validates medical necessity against level of admission criteria
- Identifies diagnosis specificity, linkage, and defensibility gaps impacting DRG capture
- Captures professional fee CPTs, including E/M level and critical care

RESULT

Charts reflect the true complexity of care, reducing queries, rework, and denials.

POWERED BY SAYVANT QUALITY SYSTEM (SQS)

The only real-time documentation quality scoring system built for acute care.

SQS is a physician-validated scoring system, trained by 100s of board-certified emergency and hospital medicine physicians.

Every note is scored for completeness, clinical quality, and financial defensibility. Clinical leaders can quantify incidence, size, and cost of documentation variability across their groups.

FOR EMERGENCY & HOSPITAL MEDICINE

Built by acute care physicians.

Sayvant was built by physicians who sign charts every shift. Defensibility, compliance, and clinical standards are built in, not bolted on.

OUTCOMES

Higher quality documentation produces measurable results.

1+ hrs

Saved per shift
on documentation

5%

Average reduction in Turnaround
Time to Admit or Discharge (TAT-
A/TAT-D)

3%

Improvement in net inpatient
facility fee revenue

4%

Lift in net professional
fee revenue

“

My anxiety level is almost at a zero. Going back to my desktop and my HPI is sitting there waiting for me was this aha moment.

Dusty Anderson, MD

Systems Medical Director, Bon Secours Mercy Health

“

Sayvant can augment your intelligence and make you a better doctor and keep you from missing things.

D. Scott Moore, DO, MS, FAAEM

Emergency Medical Director
