

"At Seefeld Investments, our philosophy is clear. We are ethical investors seeking above-market returns by backing exceptional people and their passion.

With deep technology proven in real-world settings, a standout management team with a track record of scaling ventures, and a bold vision for near-term growth, OKA is a perfect fit for our portfolio.

Having visited OKA's operations in Western Australia and seen firsthand the work behind the Gen 5 vehicle, we were proud to become OKA Australia's first investors. Our engagement is intended not only to support the business with capital, but to catalyse momentum as it enters its next growth phase.

Given our background in mining and commodities financing, and Seefeld's global connections across the resources sector, we see a compelling need for a rugged vehicle platform like OKA. Its reimaged solution, which is modular, remanufacturable, and designed for the future with compatibility for electric and hydrogen powertrain options, delivers the resilience and innovation we seek in all our investments. I am pleased to open our network to support OKA's commercial expansion.

We are long-term supporters of OKA and have deep confidence in the team's ability to generate outsized returns for its shareholders. Its IP-led licensing and leasing model exemplifies the kind of high-conviction, high-impact opportunity we value."
