The Global Trusted Tech Standard (xGTT)
Legal Status Guide

Legal Status

The Global Trusted Tech Standard (xGTT) is an open standard published by the Krach Institute for Tech Diplomacy at Purdue. It is not a regulatory finding, an audit opinion, a legal conclusion, an investment recommendation, an export-control determination, or a product-performance certification. Nothing in xGTT, or in any evaluation conducted against it, constitutes legal, financial, investment, or other professional advice. It does not have the force of law in any jurisdiction.

Governments and institutions that choose to incorporate xGTT criteria into their own procurement rules, due-diligence processes, or investment screens do so entirely under their own legal authority — xGTT provides the criteria; it does not confer authority to use them.

Who Is Responsible for an Assessment

All assessments, determinations, and decisions made using xGTT are the responsibility of whoever conducts them — an applying authority (a government or enterprise using the standard directly) or a third-party evaluator it engages. Third-party evaluators operate independently; their assessments and the conclusions they reach are their own, not the Krach Institute's.

The Krach Institute does not issue company-specific evaluations. A company that wishes to dispute an evaluation, or to point to additional public evidence, can raise it with the party that conducted it.

Liability and Independence

The Krach Institute publishes xGTT as an open standard. It does not issue scores, ratings, verdicts, badges, or procurement recommendations regarding any individual company, and bears no responsibility for determinations made by others who apply the standard. The Krach Institute makes no representation as to the accuracy, completeness or currency of third-party public records relied on in any evaluation. An xGTT evaluation is not a substitute for independent due diligence, and no evaluation conducted against xGTT contains any legal, financial, investment, or other professional advice. Applying authorities and any third-party evaluators they engage should conduct their own independent due diligence and obtain their own independent legal advice regarding their use of xGTT criteria in procurement, investment, or partnership decisions.

Because the Krach Institute issues no scores or verdicts about individual companies, there is no mechanism through which commercial or government interests could pressure the outcome for a specific company — the independence of the standard follows from that structure, not merely from a stated intention to remain independent.

Name and Mark Usage

"Global Trusted Tech Standard," "xGTT," and the Krach Institute's logo are reserved marks. The documents that make up the xGTT Standard are published for open use — anyone may read, implement, and cite them — but using the xGTT name or mark to describe a company's own status, rather than to cite the standard itself, is outside that permission regardless of how favorable the underlying claim would be.

There is currently no Krach Institute-operated portal, database, badge, or public disclosure mechanism of any kind associated with xGTT. Any claim that references one — an "xGTT listing," an "Alignment Portal entry," or similar — does not describe anything that exists and should not be made.

Disclaimer

The Global Trusted Tech Standard (xGTT) is an open standard published by the Krach Institute for Tech Diplomacy at Purdue (the "Krach Institute"). Use of xGTT is subject to the xGTT Terms of Use available from the Krach Institute and your use of xGTT shall constitute your acceptance of those terms of use. The Krach Institute and affiliated entities disclaim all liability from the use of xGTT and users are advised to follow the standards for fact-based evaluations and may be subject to claims by third parties relating to your evaluation. No evaluation, rating, or score made using xGTT is a substitute for independent due diligence. Anyone considering a transaction or investment, or other decision involving an evaluated government, company, or organization should perform its own independent investigation and analysis and should not rely on any xGTT evaluation for that purpose.
