

Lumara Shroud

Advanced Email and Collaboration Security

Secure Conversations. Protecting Your Team.

Your team thrives on email and collaboration platforms. So do cyberattacks.

Lumara Shroud protects your team from phishing, business email compromise (BEC), and the growing threats targeting Microsoft Teams and Slack. We integrate directly via API to deliver a layer of protection that your native security controls simply can't match.

Why It Matters

■ 90% of Breaches Start with Phishing

Social engineering tricks employees into clicking malicious links, downloading malware, or wiring funds to fraudulent accounts.

■ Threats Extend Beyond Email

Microsoft Teams and Slack are increasingly used to share malicious links and files, expanding your attack surface.

■ Native Security Is Not Enough

Platforms like Microsoft 365 can miss advanced, targeted attacks designed to slip past default controls.

■ Delayed Reporting Increases Risk

Threats that reach inboxes can still put users and the business at risk if they are not found and removed quickly.

What It Does

Lumara Shroud integrates with your cloud email and collaboration platforms via API, using AI to analyse every message and block phishing, BEC, and advanced threats. Our SOC claws back malicious emails after delivery, so anything that slips through is contained fast.

How Lumara Shroud Protects You

Lumara Shroud protects your email and collaboration platforms with AI-driven detection, all managed by our Australian SOC.

AI Email Threat Detection

AI-powered engines analyse inbound and internal email for social engineering, impersonation, lookalike domains, and financial fraud.

Malicious Link Neutralisation

Extend protection beyond email to Microsoft Teams and Slack, blocking malicious links and files shared in channels, chats, and direct messages.

Email Authentication (DMARC/SPF)

Every link and attachment is analysed in a secure, isolated sandbox to identify and block zero-day malware and novel phishing sites.

Phishing & BEC Protection

We monitor and block suspicious activity, unusual sending patterns, and internal phishing from compromised accounts.

Collaboration Platform Security

Find and remove malicious emails from inboxes after delivery with a single click from our SOC, eliminating the risk of delayed user reporting.

Security Awareness Integration

Our SOC runs 24/7 monitoring, manages policy and configuration, and investigates high-severity alerts to keep communications secure.

Protecting Australians since 2006

Australia is Secure when Australian talent defends it.

Lumara is built by Secure ISS, a sovereign Australian cybersecurity and technology services provider trusted across government, education, healthcare, and industry. With deep understanding of Australia's regulatory environment and threat landscape, we deliver intelligence-led security designed for local conditions.
