

Wireless whole-body
EMS SYSTEM
complying with **medical standards**

EN ISO
13485

 **BODY**
PRO»

Recent years have taught us to always think in **flexible solutions** so our business can **adapt to new situations quickly** and easily.

The demand for EMS trainings was high even during the pandemic, and thanks to **XBody's versatile devices and business models**, the market and business could stay stable.

Our portable, **professional wireless systems** and **contactless suit-up process** made it possible for studios and trainers to operate even during the most difficult times.

With this in mind, we developed the **XBody PRO**! By combining a tablet with the proven XBody software, the XBody PRO offers a variety of possible uses, whether in the studio or on the go.

Compatible with our other products, XBody PRO can also **complement your existing XBody systems**, giving you total freedom and the possibility to take your EMS business to the next level **in all circumstances**, even in a rapidly changing world.

PROGRAM MODE

IEC
60601

The quality management system is EN ISO 13485:2016 certified.

The product complies with state of the art medical standards.

Manufacturer based in EU.

ACTIWEAR G2

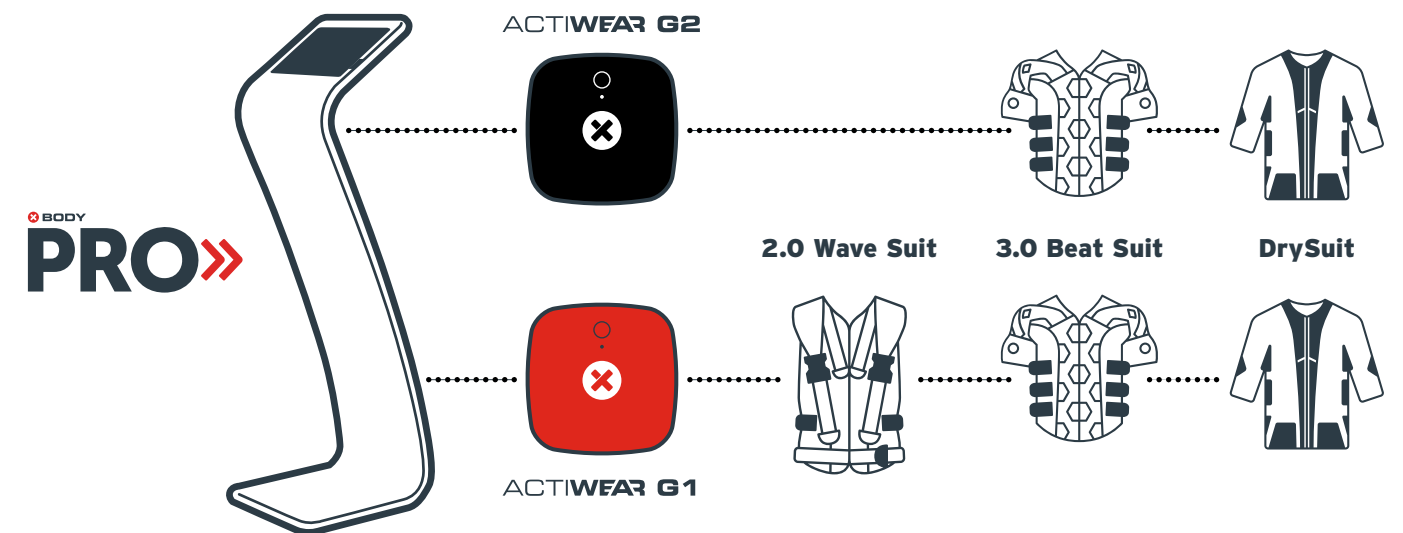

Its streamlined, elegant design and slick black surface fits perfectly into the well known **high-end** look of XBody products.

It features a convenient **battery life indicator** bar for seamless studio workflow, and an **individually colored LED light** for easy client identification.

Actiwear G2 has an extended stimulation parameter range increased to 150 Hz, so the TENS effect can be achieved over a wider range, providing possibilities in pain relief. In addition, the pulse depth has also been increased, allowing more specific and even more personalized settings.
