

Carbon X1 fender

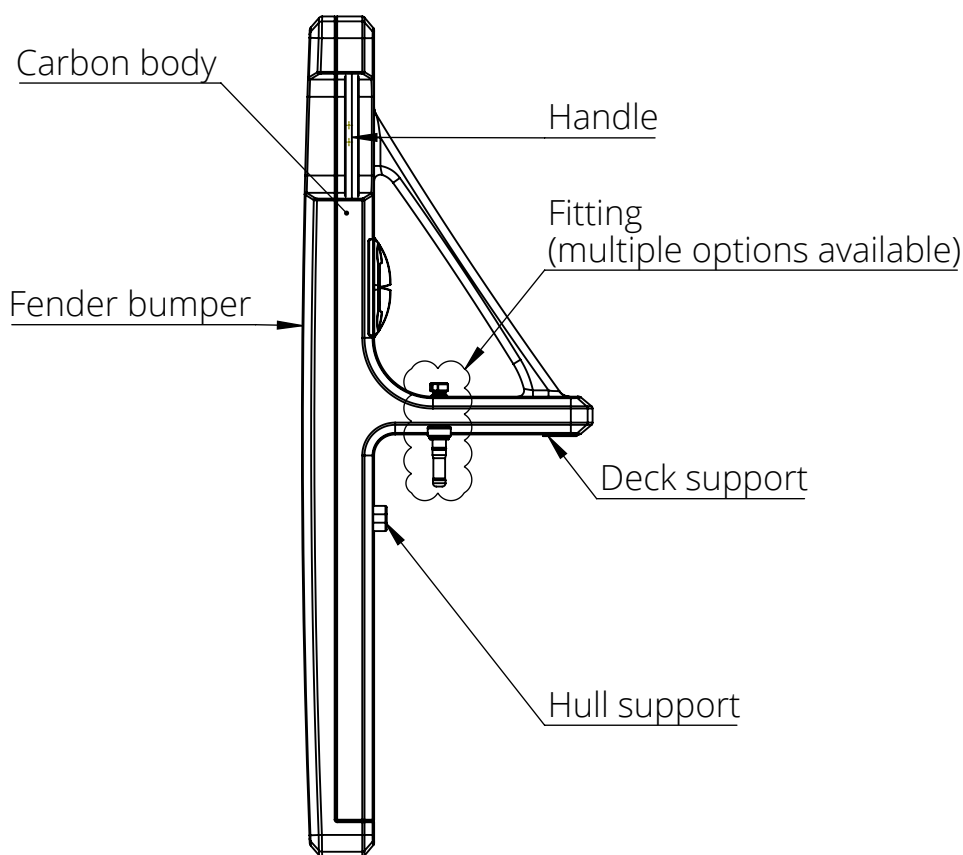

Material: Carbon fiber, Stainless steel 316 and PU Foam

2000002799

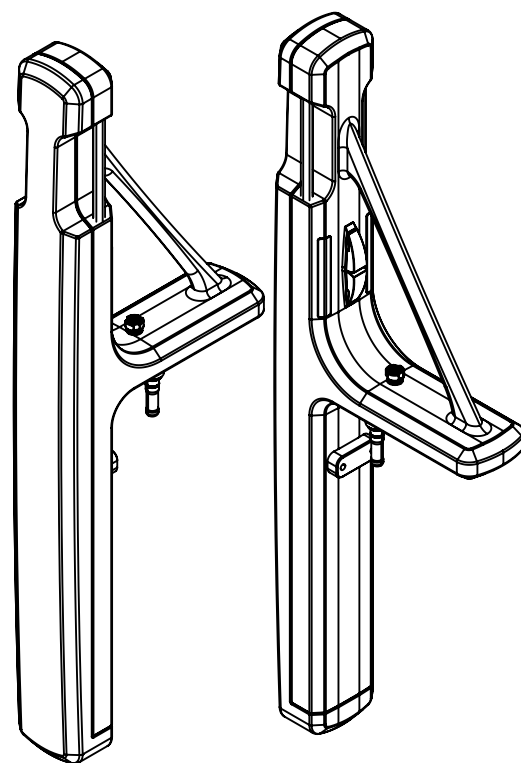

Description

The X1 fender is the heavy duty fender that keeps vessels up to 12 tons safely alongside any yacht. Due to its light weight and easy to carry geometry, the X1 fender installation is a single person job.

Care has been taken into designing a solution that is both strong and appealing. Two integrated carbon handles allows passengers to firmly hold on to while boarding the yacht.
