

FRAMEAUTH V2

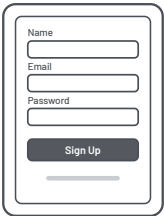

FOR FRAMER

Setup Guide

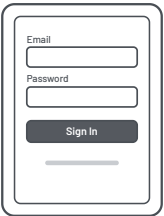

FRAMEAUTH

Kit Content

What's in the Plugin

A form for signing up with fields for Name, Email, and Password, and a Sign Up button.

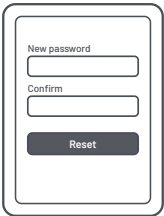

Sign Up
/sign-up

A form for signing in with fields for Email and Password, and a Sign In button.

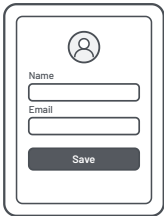

Sign In
/sign-in

A form for forgot password with a lock icon, an Email field, and a Send Link button.

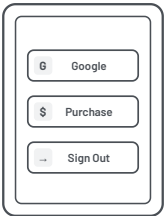

Forgot Password
/forgot-password

A form for resetting password with fields for New password and Confirm, and a Reset button.

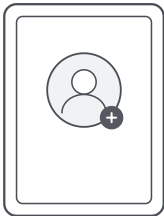

Reset Password
/reset-password

A form for user profile with fields for Name and Email, and a Save button.

Profile
/account

A component showing three buttons: Google, Purchase, and Sign Out.

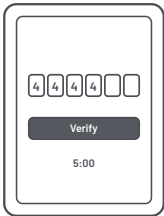

A
Action Button
any page

A component showing a profile photo placeholder with a plus icon.

B
Profile Photo
/account

A form for sending OTP with an Email field, a Send Code button, and an envelope icon.

C
Send OTP
/sign-in

A form for signing in with OTP with a numeric input field, a Verify button, and a 5:00 timer.

D
Sign In OTP
/otp - code expires in 5 min

Insert each component from the plugin's **Components** list and style it with native Framer controls. Behaviour comes from overrides in **FramerAuthV2.tsx**, added when you connect your project. The Action Button (A) handles social sign-in, checkout and sign out.

Getting Started

Install Plugin

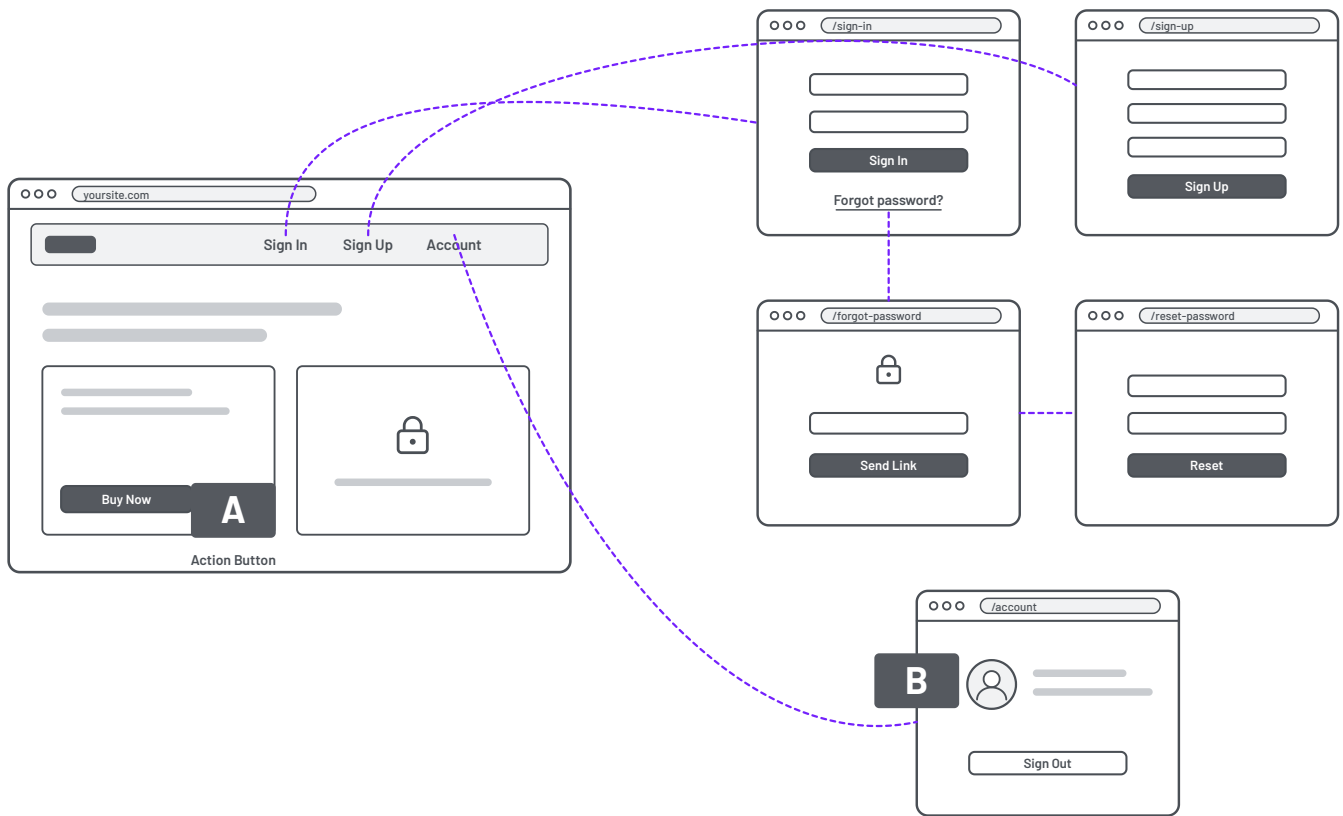

Add the FrameAuth Plugin

Open this guide on the computer you build in, then click below to add FrameAuth to Framer.

Add to Framer

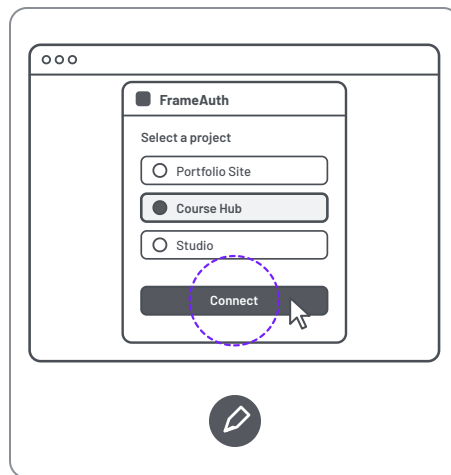

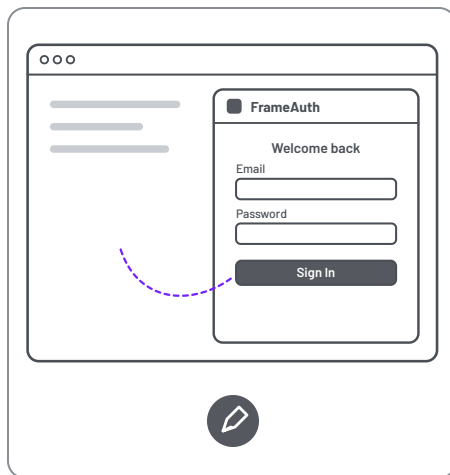

dub.frameauth.com/plugin

In Framer

In the FrameAuth dashboard

Framer AI

Open the Plugin

Open FrameAuth in Framer and sign in or sign up.
Not installed yet? [Add to Framer](#).

Connect Your Project

Select your project and click **Connect**. This adds the **FramerAuthV2.tsx** overrides file to your site.

Setup with AI

Copy the prompt from **Getting Started** → **Setup with AI** and paste it into Framer AI (ChatGPT 5.6 Sol, Medium recommended).

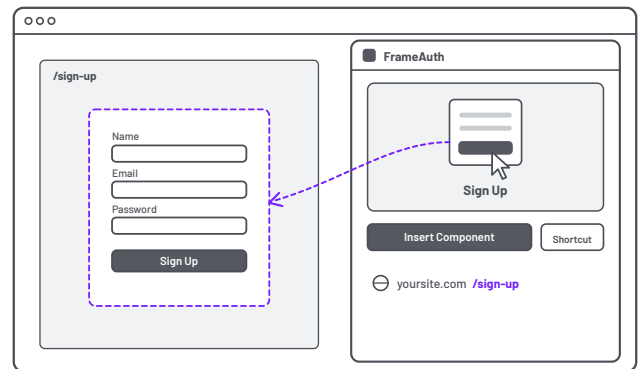

It builds OTP sign up and sign in, an /account page and nav buttons. To build the password flow above by hand, follow steps 1-4.

1 COMPONENTS

Insert the Auth Forms

In the plugin's **Components** list, click **Insert Component** or drag a form onto the canvas. Put each on its suggested page: `/sign-up`, `/sign-in`, `/forgot-password`, `/reset-password`.

Style with native Framer controls. Copy styling between forms with `⌘C` / `⌘V` (Alt+Ctrl+C / V on Windows), or start from the [Blocks remix](#).

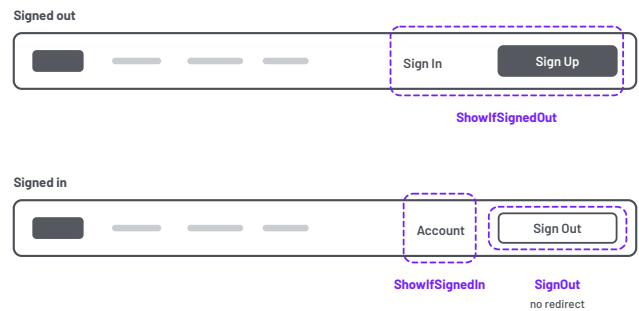

2 COMPONENTS

Add Nav Buttons

Add Sign In, Sign Up and Sign Out buttons to your navigation, plus an Account link.

Apply **ShowIfSignedOut** to Sign In and Sign Up, and **ShowIfSignedIn** to Account. Apply **SignOut** to Sign Out with no redirect; members return to your home page. [Remix Navbar](#)

3 COMPONENTS

Build the Account Page

On `/account`, insert the **Profile** and **Profile Photo** components. Members can edit their name, email and custom fields.

Show their details by applying the **Name** and **EmailAddress** overrides to text layers. [Remix Profile](#)

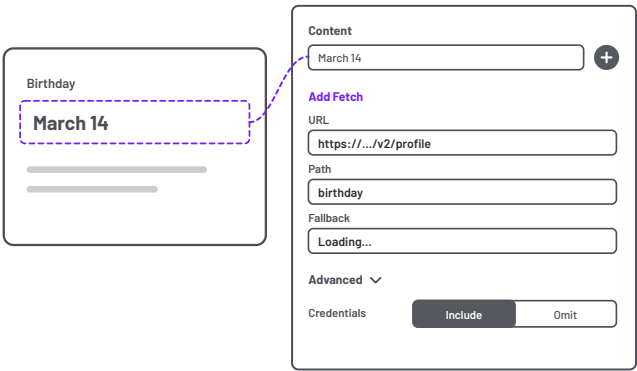

4 COMPONENTS

Show Custom Fields

On a text layer, click + next to Content, then **Add Fetch**. Paste the profile URL from the plugin's **Personalized user account** step (ends in /v2/profile).

Set **Path** to the field name (e.g. birthday) and **Fallback** to "Loading...". Under **Advanced**, set credentials to **Include**. [Guide](#)

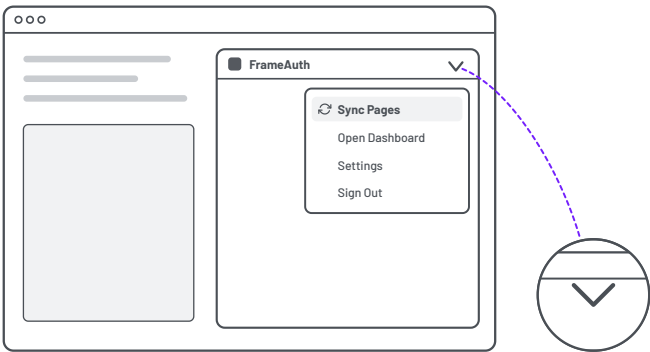

5 LOCK CONTENT

Sync Your Pages

In the plugin, click the caret in the header, then **Sync Pages**. Your pages appear in the FrameAuth dashboard.

Sync again whenever you add pages.

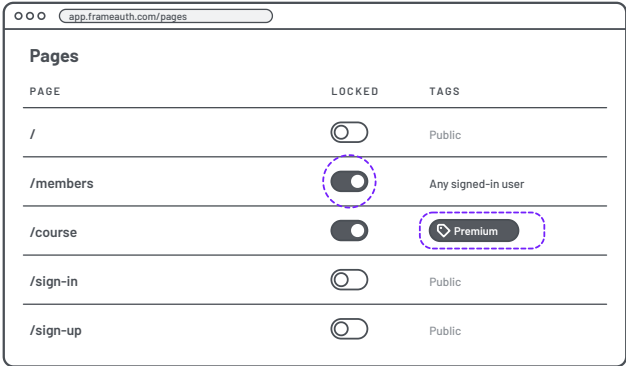

6 LOCK CONTENT

Lock a Page

On the [Pages](#) screen, switch on the lock. With no tag, any signed-in user can view the page. Add tags to limit it to members holding any of them.

Visitors without access are sent to **/sign-in**. Leave your auth pages unlocked.

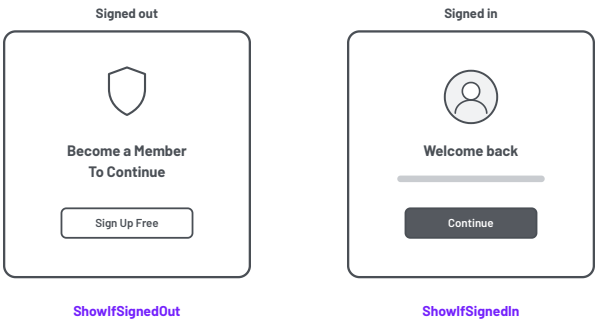

7 OVERRIDES

Show or Hide Frames

ShowIfSignedOut shows a frame only to signed-out visitors, such as a "Become a Member" prompt.

ShowIfSignedIn shows a frame only to signed-in users. [Override guide](#)

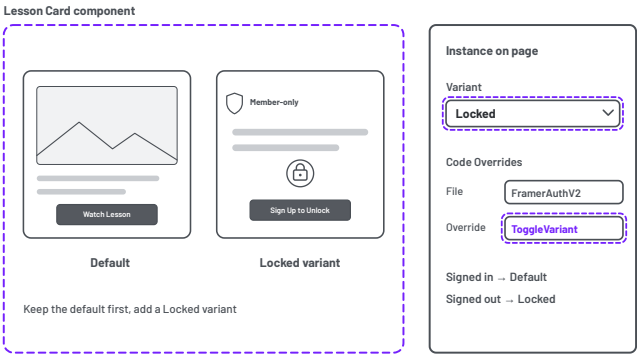

8 OVERRIDES

Show Locked Content

- 1. In your component, keep the first variant as the default and add a **Locked** variant.
- 2. On the page, set the instance to the Locked variant.
- 3. Apply **ToggleVariant**. Signed-in users see the default, unlocked variant.

[Remix \(without tags\) · Guide](#)

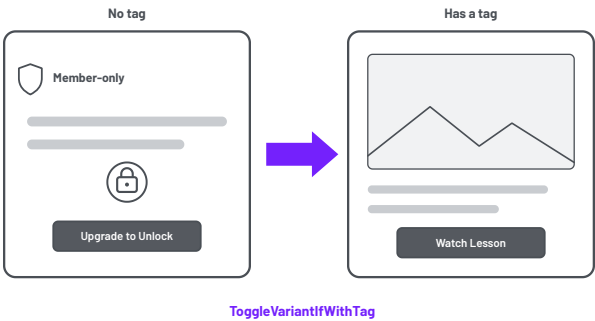

9 OVERRIDES

Lock Until Purchase

Set up the same Default and Locked variants, then apply **ToggleVariantIfWithTag** instead. Users with any tag see the unlocked variant.

To unlock for one specific tag, add the Tag Interface (next step). [Remix \(with tags\) · Guide](#)

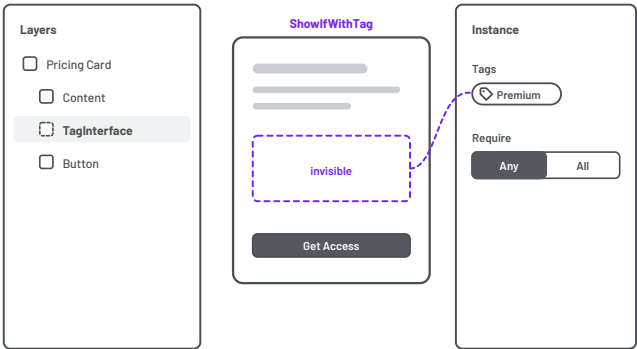

10 OVERRIDES

Show Content to Tag Holders

ShowIfWithTag shows a frame only to signed-in users with an active tag. **ShowIfWithoutTag** shows it to anyone without one.

To target a specific tag or tags, embed the [Tag Interface](#) inside the component and create variables for **Tags** and **Require**. On the instance, enter which tag(s) are required to view that component. [Guide](#)

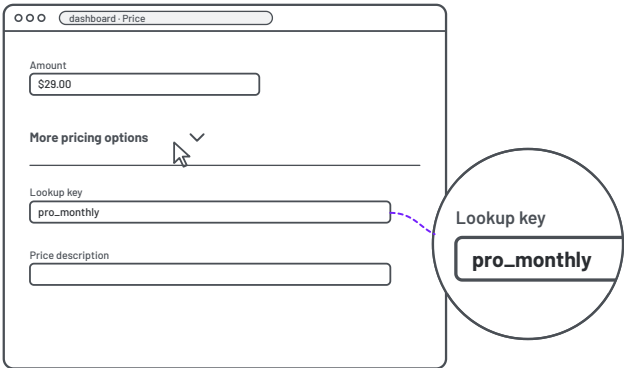

11 PAYMENTS · STRIPE

Create a Product

Install Stripe (or Stripe Sandbox) from [Plugins](#). In Stripe, create your product, open **More pricing options** and set a unique lookup key.

Selling subscriptions? [Configure Stripe](#) first.

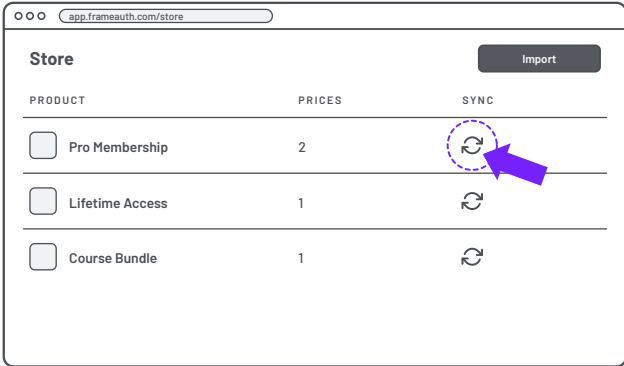

12 PAYMENTS · STRIPE

Import and Sync

On the dashboard's **Store** page, import each product you sell.

Changed a product or added a price? Click **Sync**.

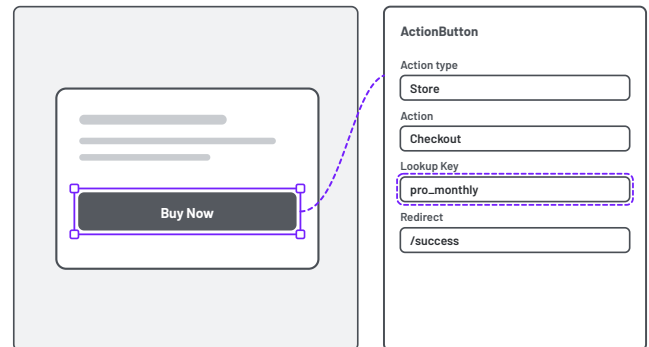

13 PAYMENTS · STRIPE

Add the Action Button

Insert the **Action Button**. Set action type **Store**, action **Checkout**, and paste the lookup key from the product details modal.

Always launch checkout from this button. Direct Stripe links won't grant tags or create users.

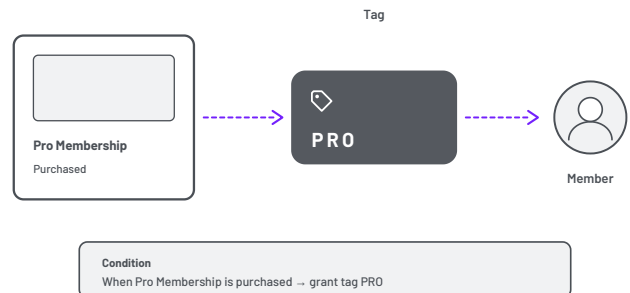

14 PAYMENTS · STRIPE

Create a Tag Condition

Tags are what unlock content. Create a tag with a condition that grants it when the product is purchased.

Then lock pages or content to that tag (steps 6, 9 and 10).

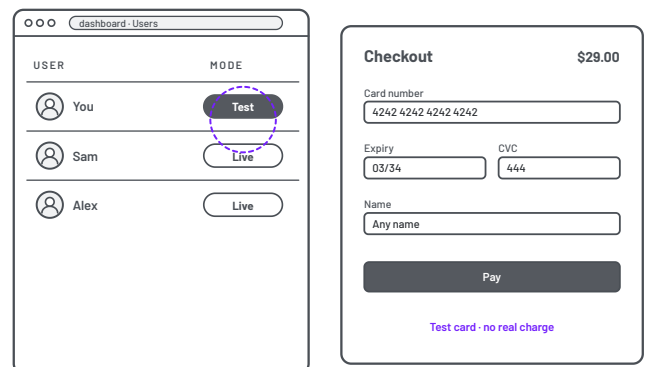

15 PAYMENTS · STRIPE

Make a Test Purchase

On the Users page, set yourself to **Test**. Test users only get tags from test purchases.

Pay with **4242 4242 4242 4242**, any future expiry, any CVC and any name.

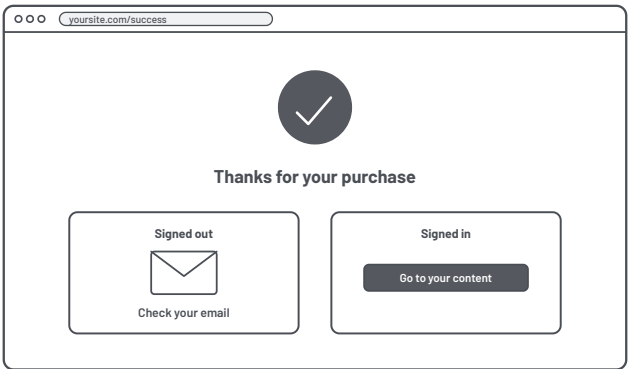

16 PAYMENTS · STRIPE

Add a Success Page

Set the Action Button redirect to **/success**.

New buyers get an account and an email from FrameAuth, so tell signed-out buyers to check their inbox. Link signed-in buyers to their content.

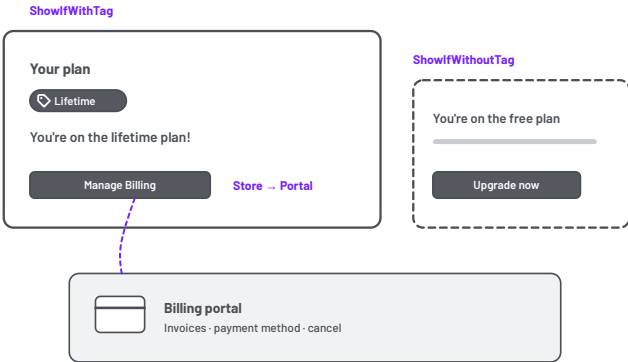

17 PAYMENTS · STRIPE

Let Members Manage Billing

Add an Action Button with action type **Store** and action **Portal**. It opens Stripe's billing portal.

Wrap it in **ShowIfWithTag** so only paying members see it, and show an upgrade prompt with **ShowIfWithoutTag**.

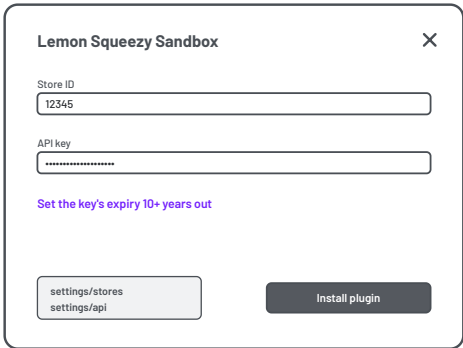

18 PAYMENTS · LEMON SQUEEZY

Install Lemon Squeezy Sandbox

Copy your **Store ID** and create an **API key** with an expiry 10+ years out.

Paste both into the plugin and click **Install plugin**.

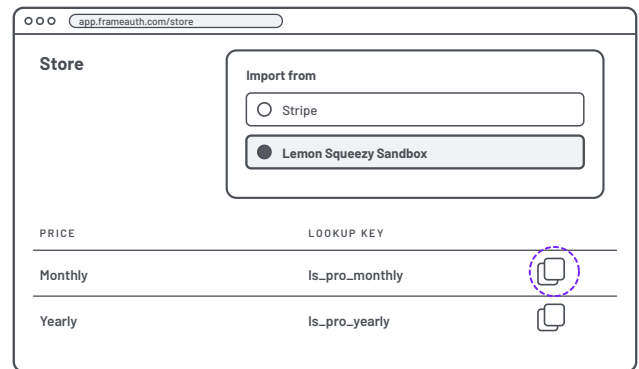

19 PAYMENTS · LEMON SQUEEZY

Import and Copy Lookup Keys

On the Store page, click **Import**, choose Lemon Squeezy Sandbox and import each product.

Each price has its own lookup key. Copy the one you want to sell.

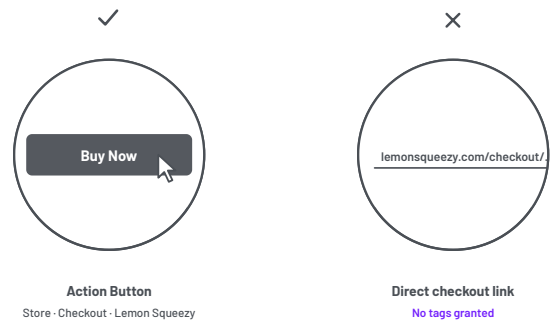

20 PAYMENTS · LEMON SQUEEZY

Configure the Action Button

Set the Action Button to **Store**, **Checkout**, plugin **Lemon Squeezy**, and paste the lookup key.

Never share checkout links. Purchases made through them get no tags.

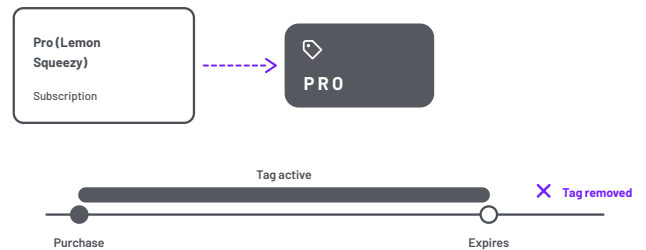

21 PAYMENTS · LEMON SQUEEZY

Connect Product to a Tag

Add a tag condition for each product so buyers get the tag automatically.

Subscription tags are removed when the subscription expires.

22 GO LIVE

Test Your Website

In test mode, check sign in, sign up, password reset, locked content and purchases.

Using social sign-on or OTP? Test those too.

Before going live

☒ Sign in

☒ Sign up

☒ Reset password

☒ Locked content

☒ Purchases

☐ Social sign-on

☐ Sign in with OTP

23 GO LIVE

Switch to Live Mode

In [project settings](#), click **Go live**.

New sign-ups become live users. Only live users can complete live Stripe purchases.
