Is your business ready to reach the NEXT level?

What is the Next ERP platform?

The Next ERP platform is a Cloud + AI ERP platform that helps growing businesses manage finance, sales, inventory, HR, and day-to-day operations in one unified system.

Choosing an ERP isn't just about choosing software - it's about choosing a system that can support your business's next stage of growth. That's exactly the system we offer you.

One system

Connects your finance, sales, inventory, POS, HR, and every other business process.

One source of data

Centralizes your business data so you can monitor and manage it in real time.

Anytime, anywhere

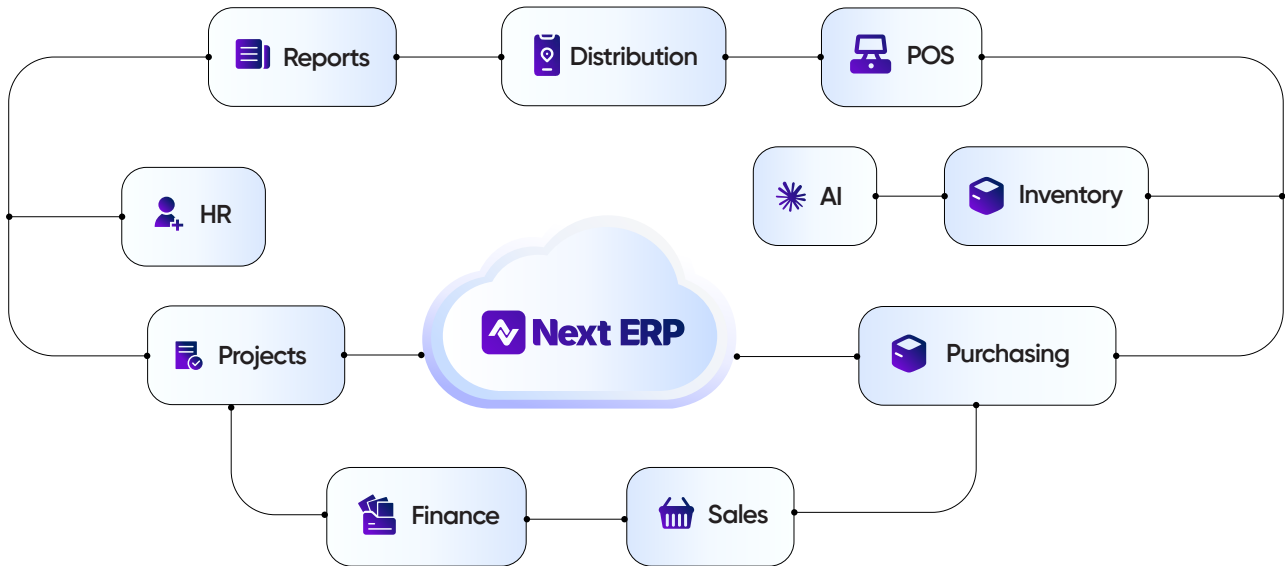

Being a cloud platform, it's accessible from any device, anytime, anywhere.

AI ready

Built on a foundation for applying analytics and AI to your business data.

Why Next ERP?

As a business grows, so does the number of branches, POS points, employees, products, transactions, and reports. The Next ERP platform grows right along with it, handling all of that growth. Its goal is to connect your growing business processes into one integrated system.

Accessible anywhere, anytime

A modern all-in-one system that runs your entire business in the cloud.

Built for Mongolian businesses

Built to integrate with Mongolian tax, finance, banking, and other real-world business processes.

Powered by AI

Manage your business centrally from anywhere using data-driven analytics and AI capabilities.

Grows with your Business

As your business grows – more branches, POS points, users, transactions – no need to rebuild your system.

20+ years of ERP development experience

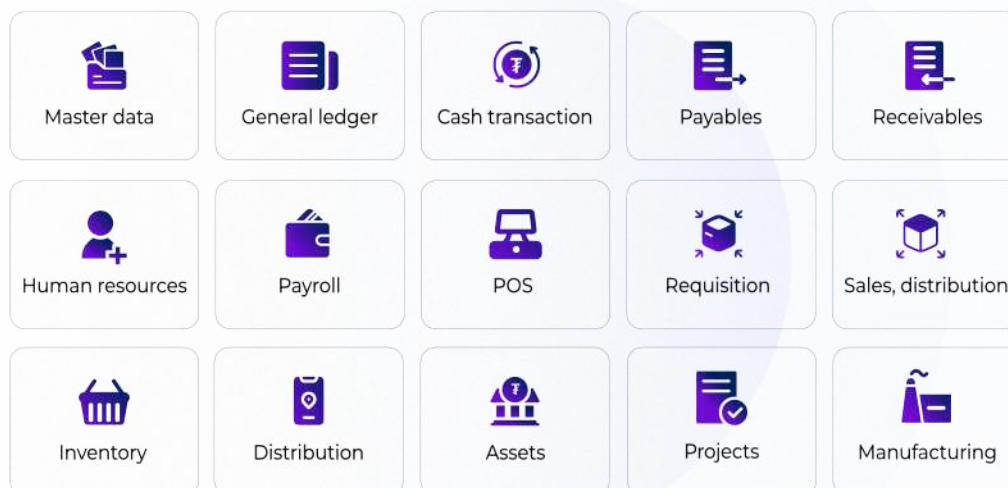

Over 20 years of proven experience successfully developing ERP systems for Mongolian businesses.

**Next ERP is a new product.
But the experience behind it is not new.**

Your business`s entire process – One system

Next ERP's modular structure lets you choose and use exactly what your business needs.

Master data

The core module that records and centrally manages the foundational reference data used across all of Next ERP's modules, in one consistent, structured standard.

General ledger

The core finance module for recording, monitoring, and approving all types of an organization's financial transactions in a unified ledger, and producing financial reports.

Cash transaction

A module that records and tracks an organization's cash, current-account, and bank account income, expenses, and cash movements in one system.

Payable / Receivable

A module for recording, closing, tracking balances, and reporting on an organization's payables and receivables with customers and suppliers.

Inventory

A detailed warehouse management module that records and tracks inventory receipts, issues, transfers, production, stocktaking, balances, cost, and turnover.

Fixed assets

A module that records an organization's fixed assets in line with accounting policy and standards, and tracks depreciation, cost, balances, and movements.

Human resources

A module that manages an organization's core employee data, transfers, contracts, orders, leave, business trips, and other HR processes in one place.

Payroll

A module that calculates payroll for each department in line with relevant laws, standards, and internal policy, and automates the payroll process.

POS

A flexible POS solution for running point-of-sale operations at retail stores, restaurants, bars, service outlets, and other business types.

Purchasing

A module that manages an organization's domestic and international purchasing, from creating an order to receiving goods and processing returns.

Sales / Distribution

A module covering an organization's direct sales and distribution processes end-to-end – quotes, orders, invoices, sales, and returns, all in one place.

Projects

A module that manages project planning, execution, contracts, costs, revenue, and invoicing in one place, giving full visibility into project progress.

Manufacturing

Records and tracks raw materials, ingredients, work-in-progress, and finished goods, along with production cost and movement.

Budget

A module for planning and managing your business's budget and related processes in one integrated place.

Next ERP supports multiple languages

Next ERP lets you collaborate on one platform with foreign specialists, management, investors, and partners – without any language barrier.

Finance + Resources + Operations

Next ERP connects the data from each business process to the next, reducing double data entry and enabling management based on real-time information.

Master data

Standardizes reference data for products, services, contacts, accounts, organizations, and branches.

General ledger

Records all types of financial transactions in a unified journal and produces reports.

Cash transaction

Records cash, bank, and current-account income and expenses, and tracks balances.

Payables / Receivables

Manages customer and supplier accounts, balances, closing, and reporting.

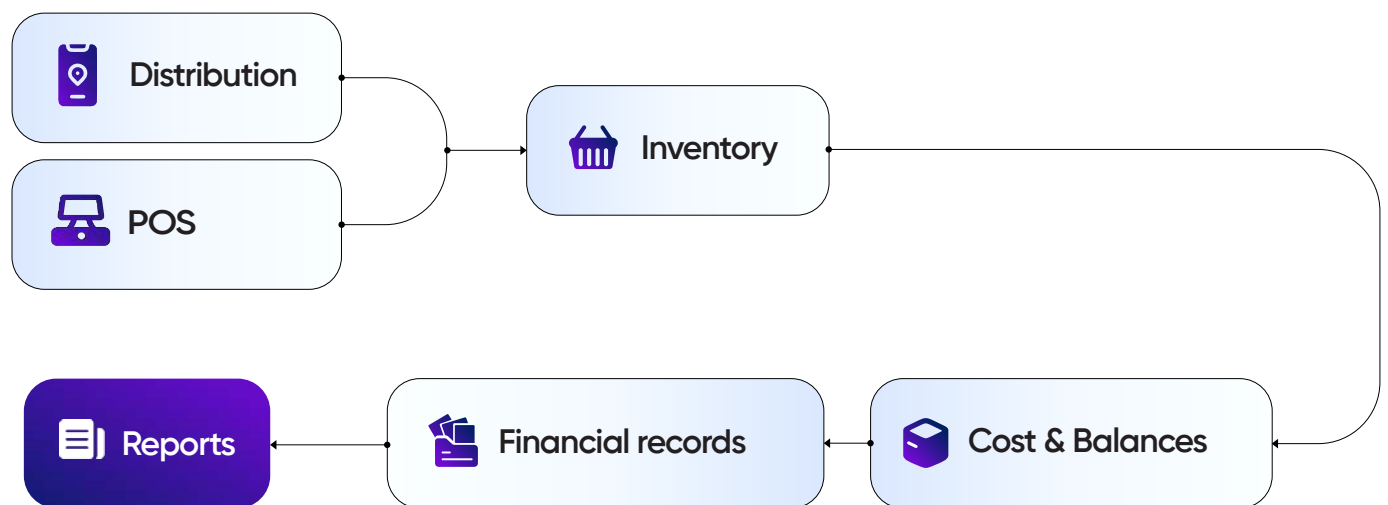

Inventory

Tracks receipts, issues, transfers, stocktaking, cost, turnover, and balances.

Fixed assets

Manages asset records, depreciation, cost, balances, and movements.

Business information flow

POS + Sales + Distribution

Connects the daily sales processes of retail, restaurant, service, and distribution businesses with the rest of your ERP platform's data.

POS

A flexible POS solution that runs on Windows, iOS, and Android devices, with Ebarimt and payment integration.

Sales

Manages quotes, orders, invoices, sales, and returns in one integrated place.

Distribution

Processes sales orders and coordinates the delivery process all the way through to the courier.

Purchasing

Manages the purchasing process from order creation through goods receipt to returns.

People + Projects + Manufacturing

Next ERP's value doesn't stop at financial record-keeping – it connects your core business processes within a single information environment.

Human resources

Manages employee core data, transfers, contracts, orders, leave, business trips, and HR reports in one place.

Payroll

Calculates payroll by department, automates the payroll process, and works with bank files and related reports.

Projects

Tracks project planning, execution, contracts, costs, revenue, invoicing, and profitability in one place.

Manufacturing

Records and tracks production of raw materials, ingredients, work-in-progress, and finished goods, plus cost and movement.

Not just record-keeping. An ERP that works with your data.

Why did last month's sales drop? Which branch is most profitable? Whose receivables are overdue? It talks with your data to answer questions like these, helping you understand information and make decisions.

Talk to your business data

An environment for applying analytics and AI capabilities to your business data.

AI assistant

An intelligent assistant that helps you access data, understand it, and make decisions.

Privacy & Security

A cloud infrastructure built to reliably store and protect your business and financial data.

Cloud

- Anytime, anywhere
- Any type of device
- Centralized information environment

Data protection

- Reliable data center
- Network and power infrastructure
- 24 hour backup

Security & Certificate

- Sectigo SSL
- Encrypted connection
- Access rights management

Next ERP was built on 20+ years of ERP development experience.

Next ERP is a new generation of cloud ERP. But the ERP development experience behind it has been built up over 20+ years in Mongolia's business sector.

01 Enterprise туршлага

ERP development experience across large-scale processes, multiple branches, and diverse business environments.

02 Accessible ERP

A modern, cloud-based ERP accessible from anywhere.

03 Integration

Connects data across POS, sales, inventory, and reporting.
