Put useful choices on one hub

What this means

A hub is a simple page with a few useful buttons. It helps someone choose what they want to do next.

A real-life example

A customer loved a salon visit. The salon tap opens a hub with booking, social, contact and honest-review options. The customer chooses without being asked to hand over details first.

Simple teaching picture. Example business; not a live screen.

Your job

Try the route yourself. Use the tools you already have, and ask for help at the first confusing step.

A tap opens a link. A person chooses whether to follow, book or share details. No automatic contact collection is promised.

Step by step: start here

1

List the choices customers actually need.

Start with booking, seeing your work, following your page or contacting you. More buttons are not always more helpful.

2

Find each real link.

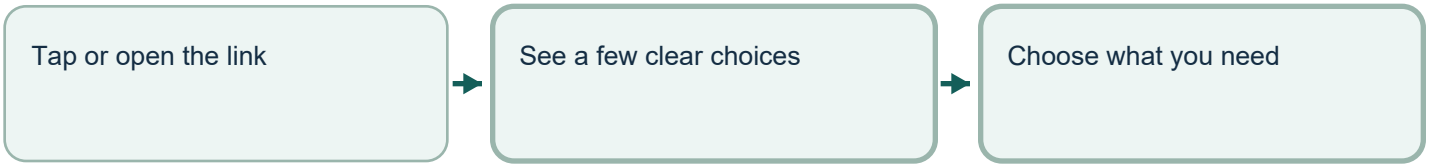

Open your booking service, social page and contact page. Make sure they belong to your business and can be used by a customer.

3

Name buttons clearly.

Use 'Book again', 'See our work' and 'Contact us'. Put the most useful action first. Do not use vague labels such as 'Click here' for every choice.

Picture the route

Before you continue

Explain the first three steps in your own words. If a link, account or permission is missing, write that down before moving on.

Finish the task and check it

4

Make the page feel like your business.

Use your real name, approved logo and a useful picture. Explain in one short sentence what customers can do here.

5

Test the whole route.

Open the hub on a phone, then try every button. Check what happens if a service asks for sign-in. A tap opens the hub; it does not automatically submit the customer's information.

6

Keep it current.

When a booking link or service changes, update the relevant button and test again. Follow the agreed process if VIBEWAVE manages your hub.

How you know it worked

The hub loads on a phone and every clearly named button reaches the promised next step.

Show someone the result on your phone. If you get stuck, write which step stopped you and ask for help with that step.
