

E11EVE

How to prototype in 5 days?

Welcome to
Prototype Sprint Workshop

Why Prototype Sprint Workshop?

- 1. Rapid problem solving** – Solve complex challenges in 5 days.
- 2. User insights** – Test ideas directly with users.
- 3. Cross-disciplinary collaboration** – Gather different perspectives.
- 4. Reduce risk** – Identify mistakes before major investments.
- 5. Foster innovation** – Explore new and creative solutions.

Prototype Sprint Structure

ACTIVITY

Day 1 – Understand and Define

We start by identifying the problem and setting clear goals. Who are the users?
What do we want to achieve?

Day 2 – Idea Development

The team sketches solutions based on the goals, and we choose the most promising idea.

Day 3 – Storyboard

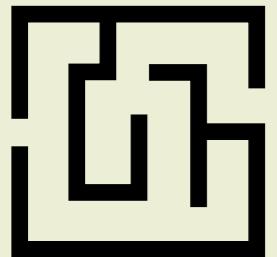

Take one or more of the concepts and turn them into simple stories that explain how the user can achieve the goals.

Day 4 – Build the Prototype

An interactive prototype is built – either digitally, physically, or as a combination.

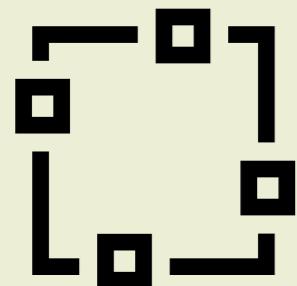

Day 5 – Testing and Feedback:

We test the prototype on real users or customers and gather valuable insights.

Guidelines

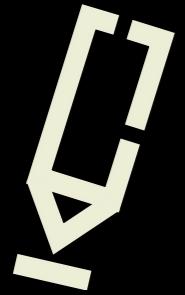

- Everyone is logged in
- No interruptions
- We are keeping to the schedule
- No discussions until it's time for that

Format: Note & vote

- Each person gets their own sticky color and independently writes down their ideas
- We take a round around the room and each person reads out their answers
- Each person reviews the others' answers and votes for their favorites
- Discuss and change the order if necessary

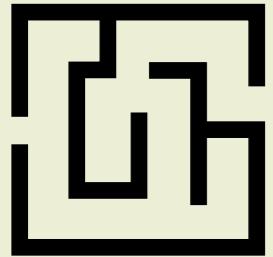

E11EVE

Activity

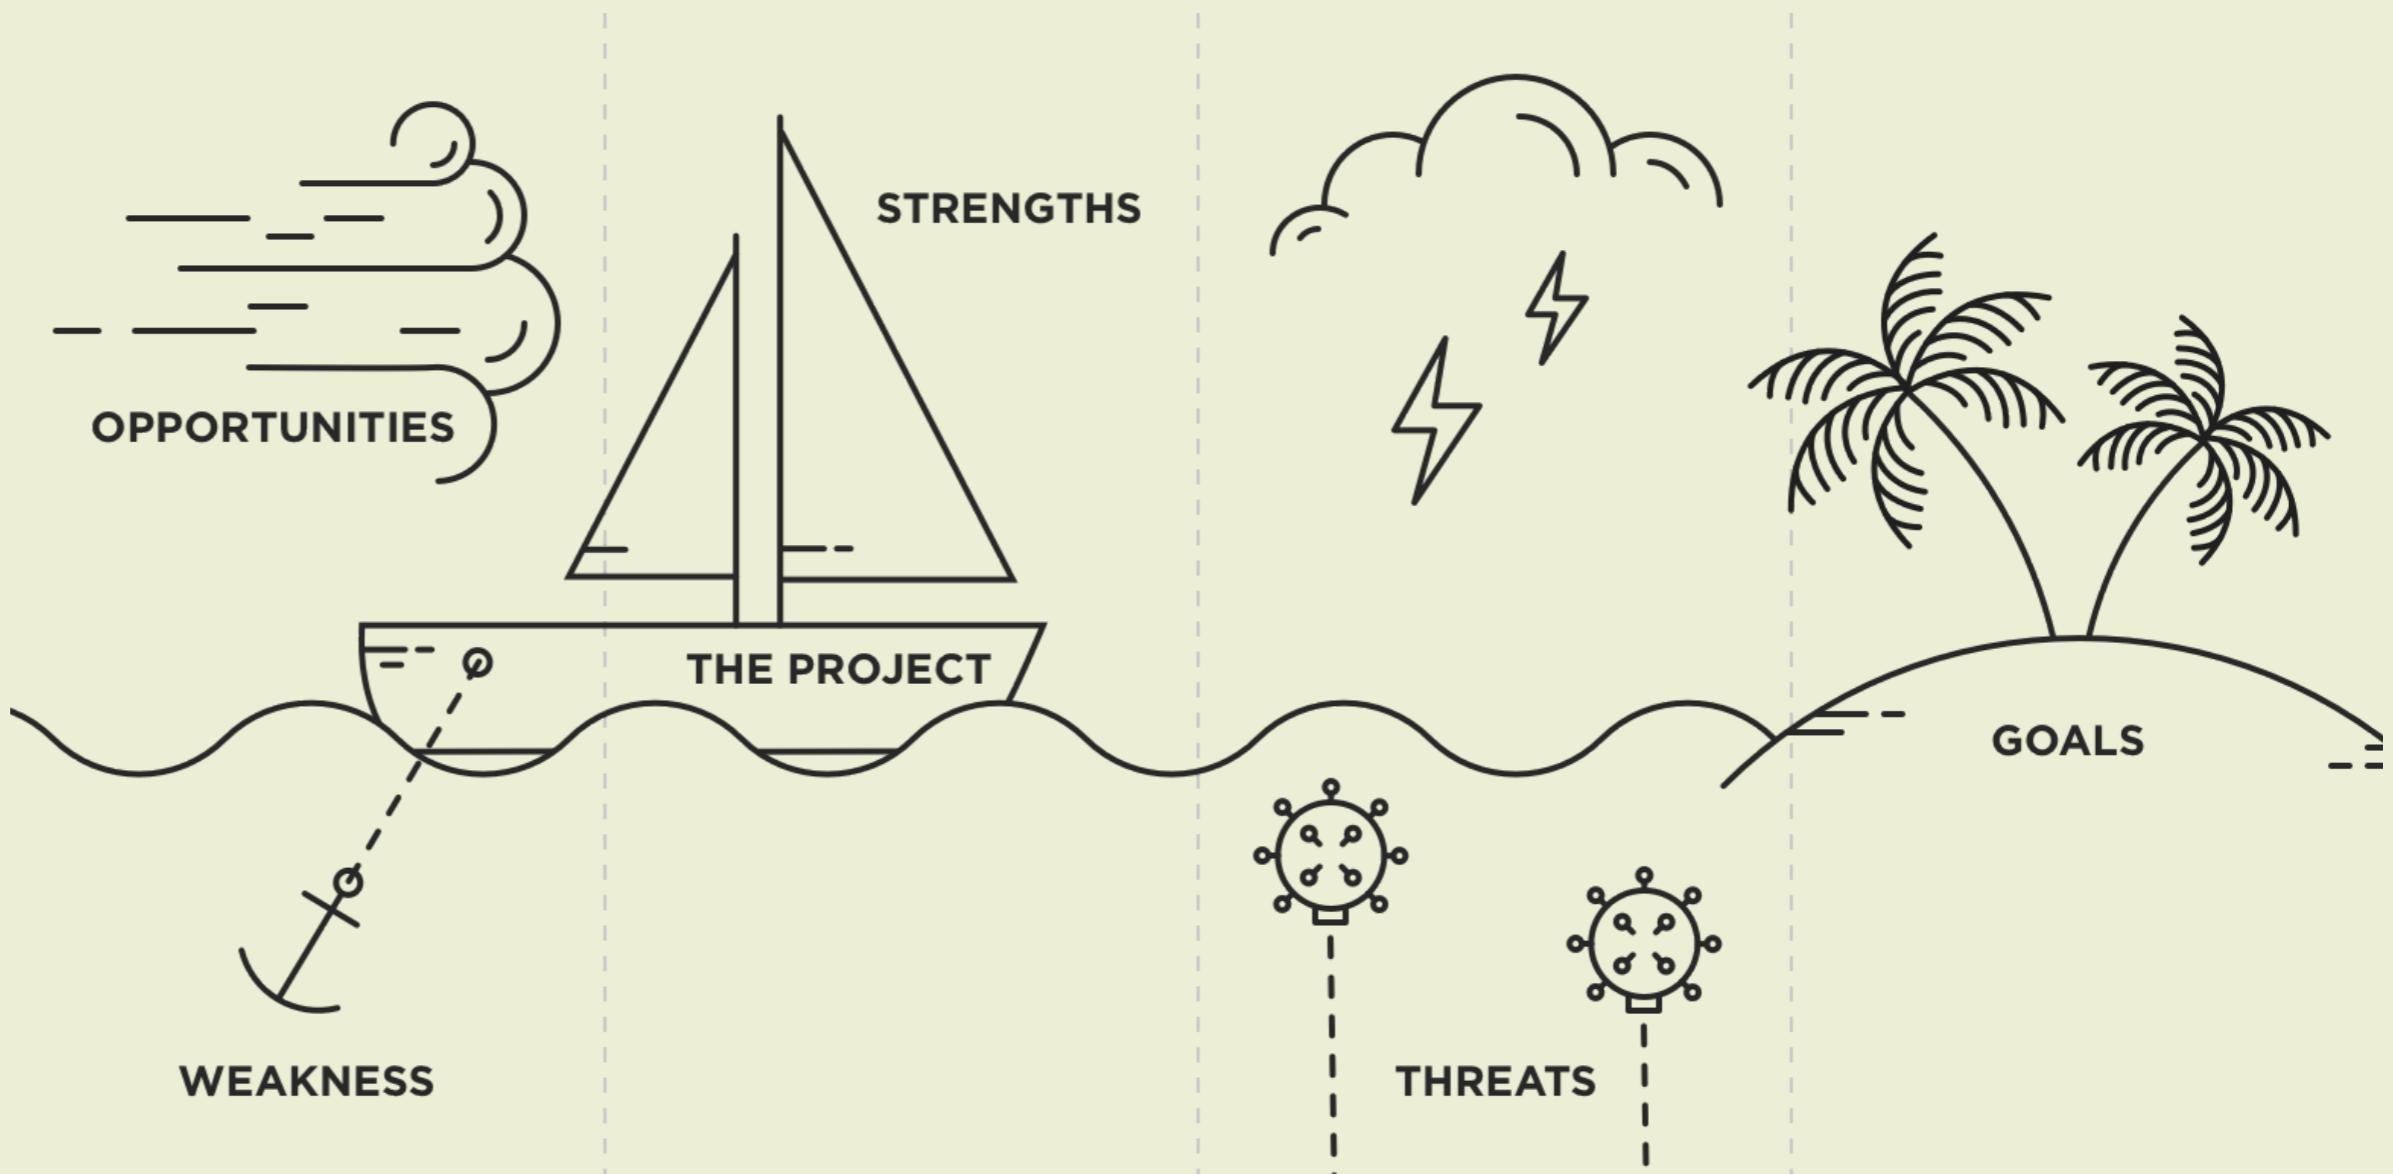

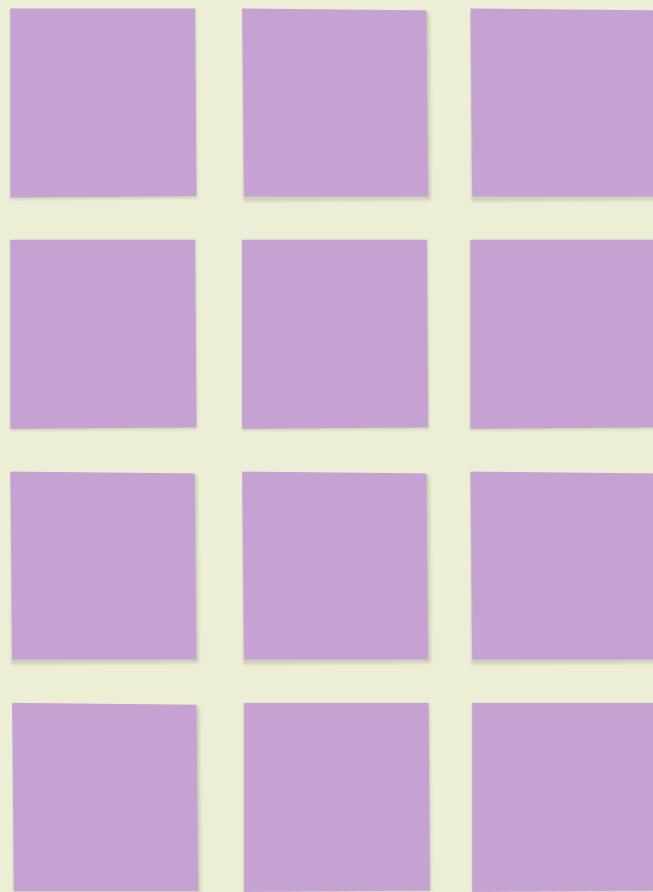

Day 1 - Understand and Define

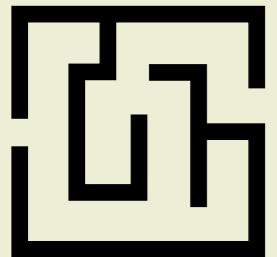

We start by identifying the problem and setting clear goals. Who are the users?
What do we want to achieve?

Guidelines

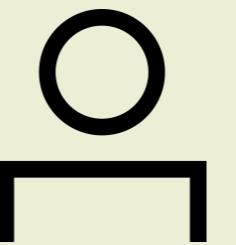

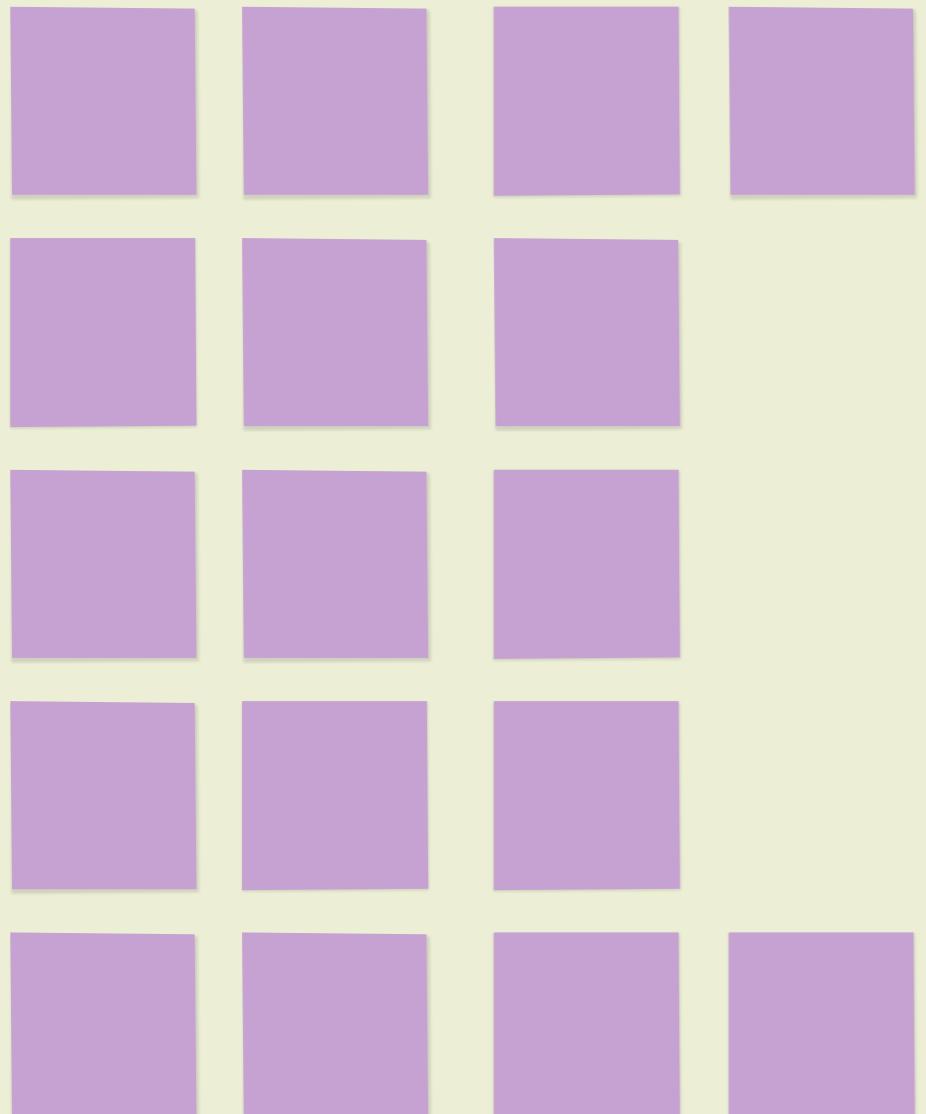

1. Use the Sailing Boat method to define drivers, obstacles, and risks
2. **Wind** – opportunities - what drives the team forward?
3. **Sails** – strengths and advantages
4. **Anchor** – weakness - things that can slow the team down or stop progress
5. **Bombs** – risks or potential pitfalls along the way
6. **Tropical island** – goals and potential unexpected gains

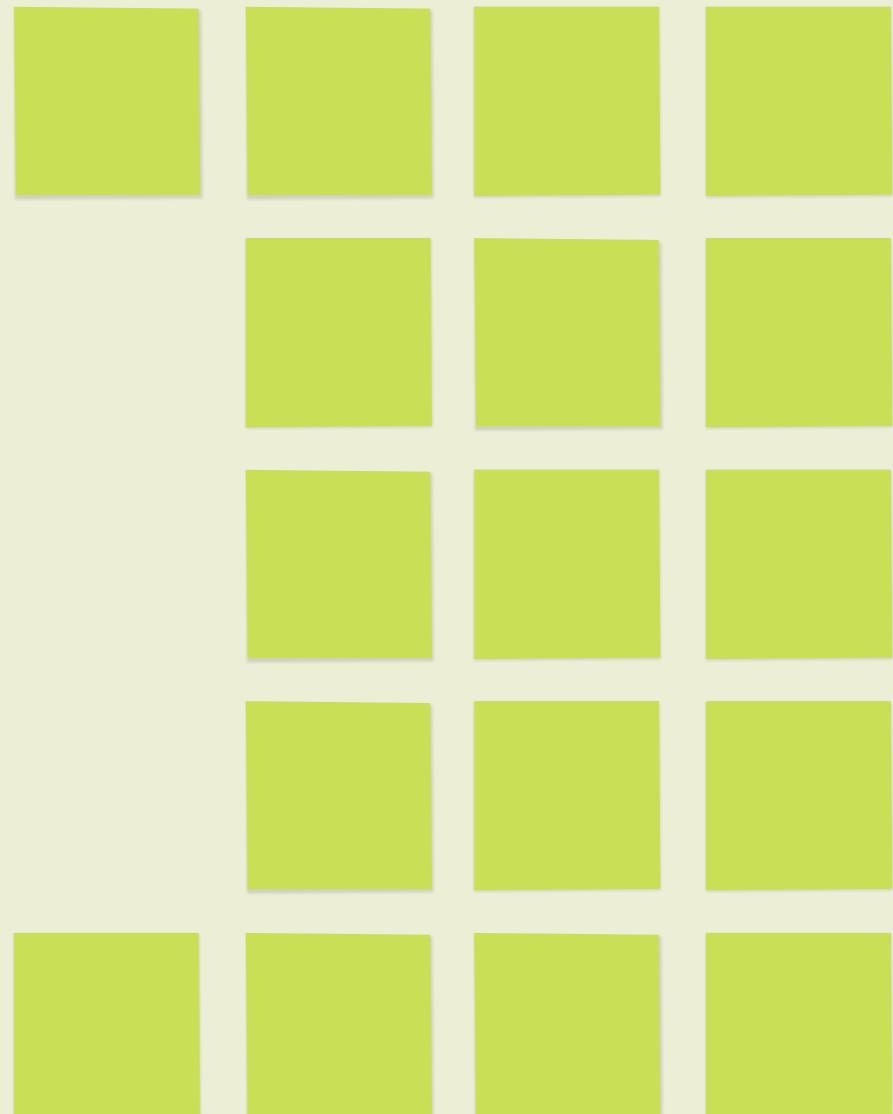

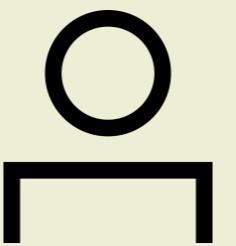

Guidelines

1. Write down possible target groups for your company
2. Each person reads their target groups aloud and adds them to the board. No discussions
3. Vote on the most important target groups.
4. Discuss why these are important
5. Decision-makers conclude with the 3 most important target groups.

Write down
target groups
that fit

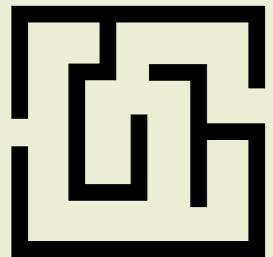

Top 3 target groups

Target
group 1

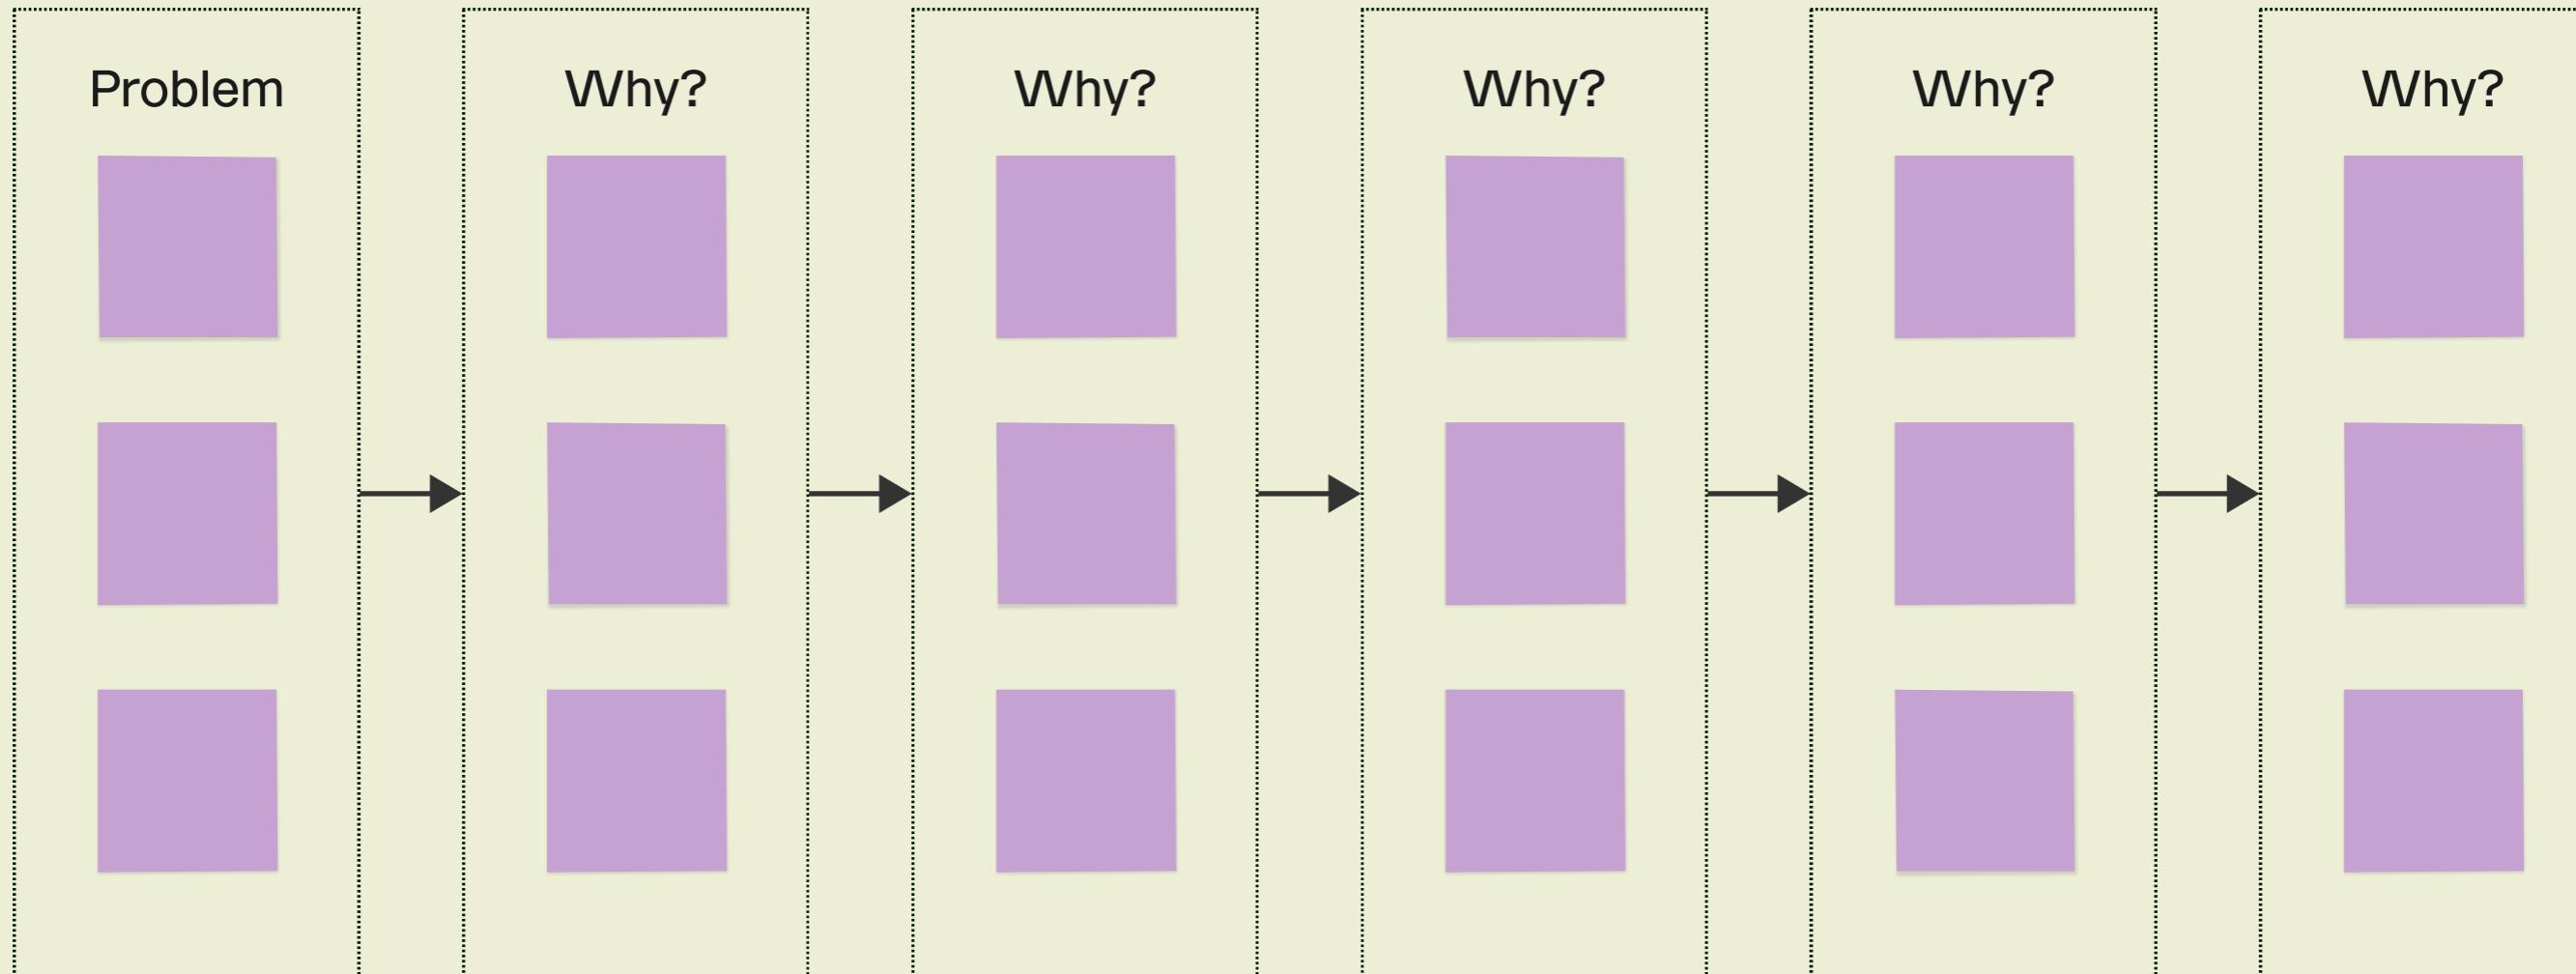

Target
group 2

Target
group 3

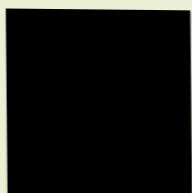

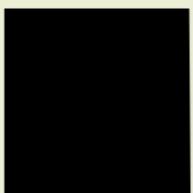

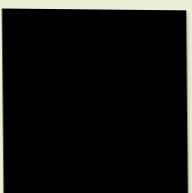

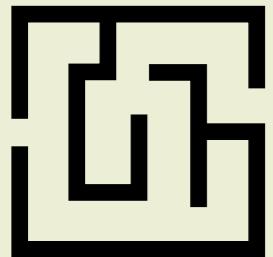

Guidelines - The 5 whys

- 1. Define the problem:** Clearly and explicitly describe the problem for everyone.
- 2. Ask the first "Why?":** Ask why the problem occurred and note the answer.
- 3. Continue with more "Why?":** Repeat at least five times to reach the root cause.
- 4. Validate:** Confirm the root cause.

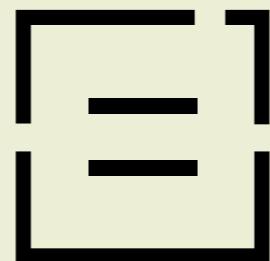

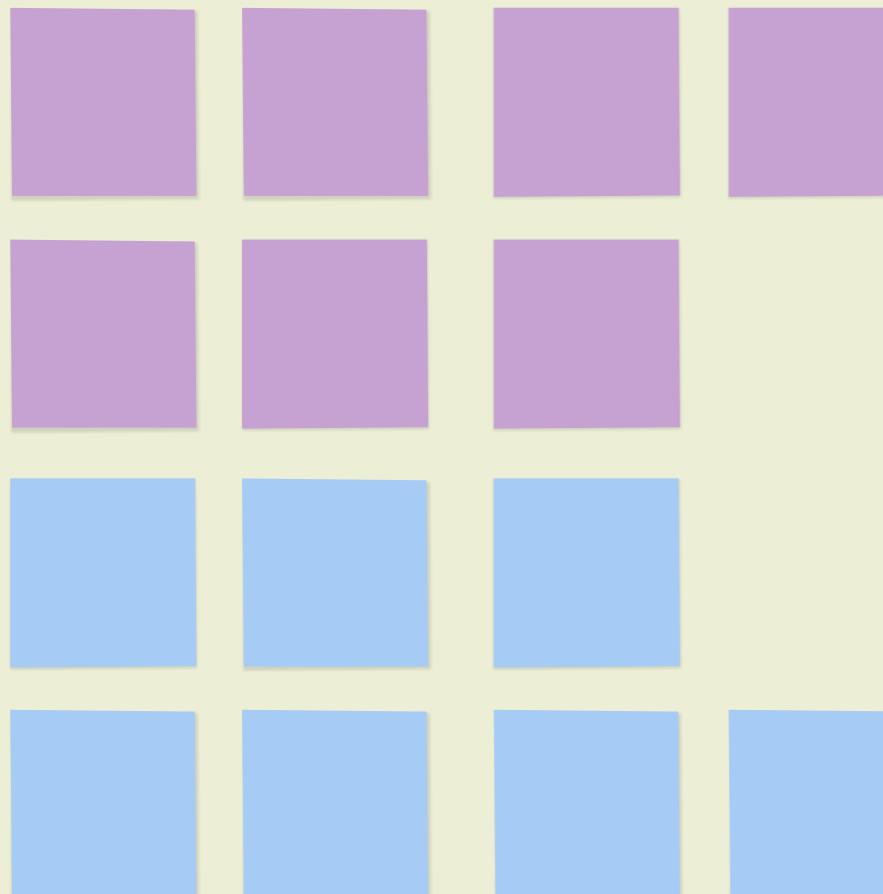

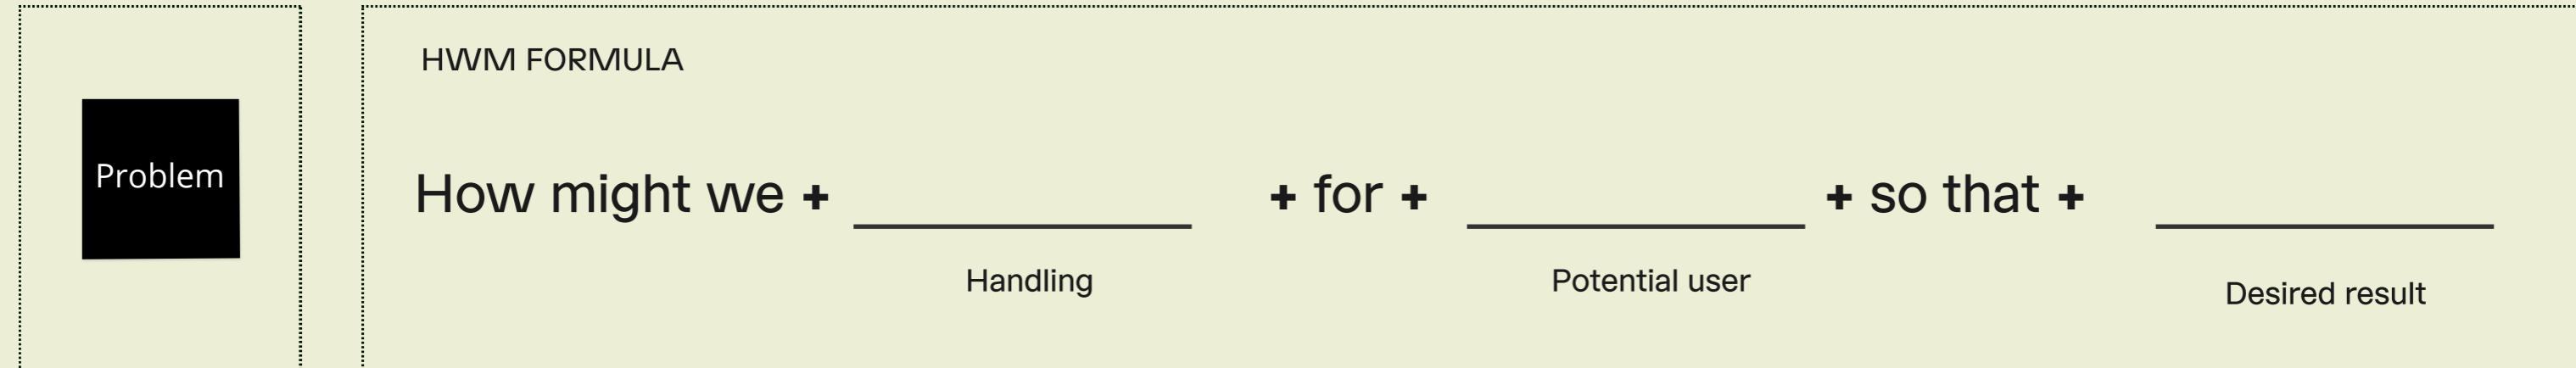

The actual
problems

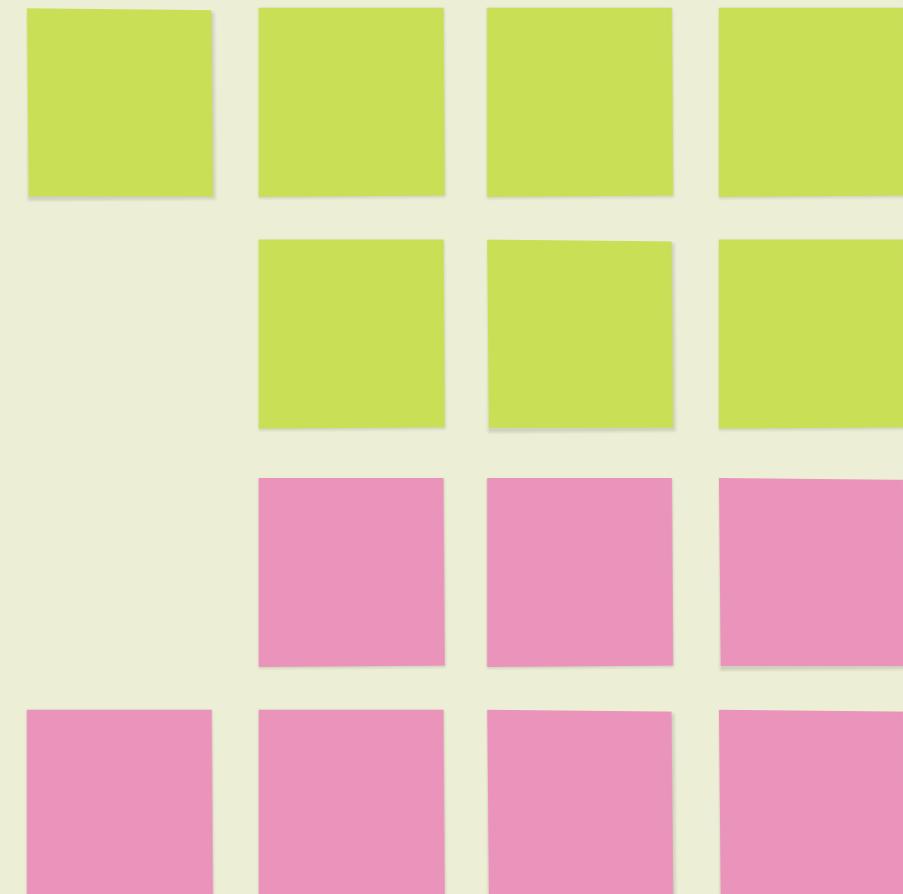

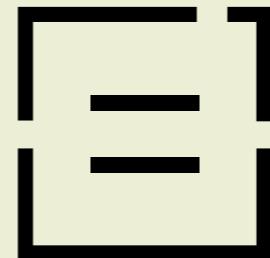

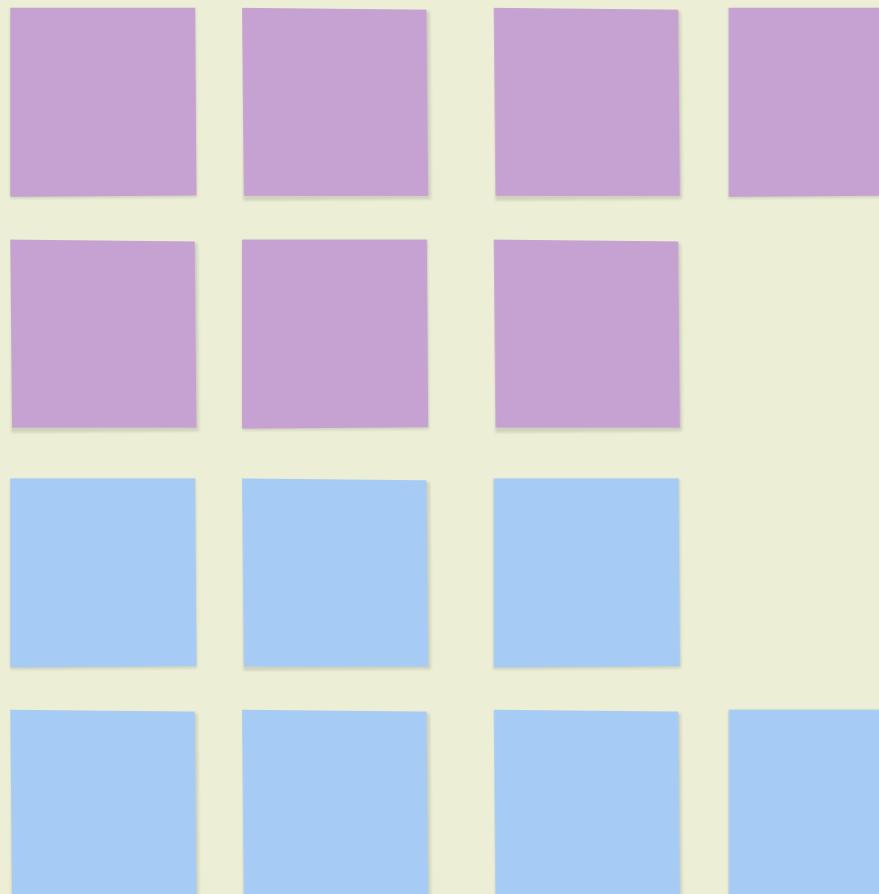

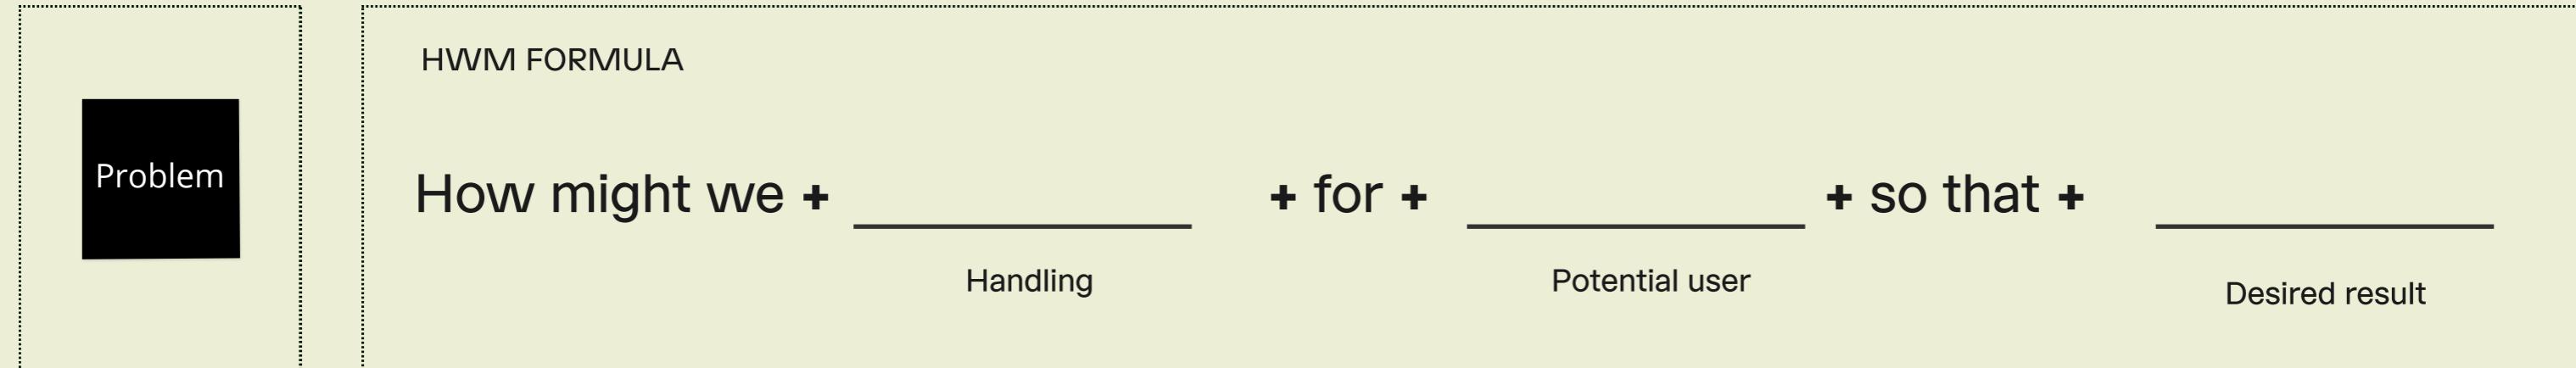

Guidelines - HMW (How Might We)

- 1. Break down the problems into HMW questions:** Create open and positive questions that start with "How might we" to inspire solutions.
2. Create an HMW question for each of the actual problems.

E11EVE

Activity

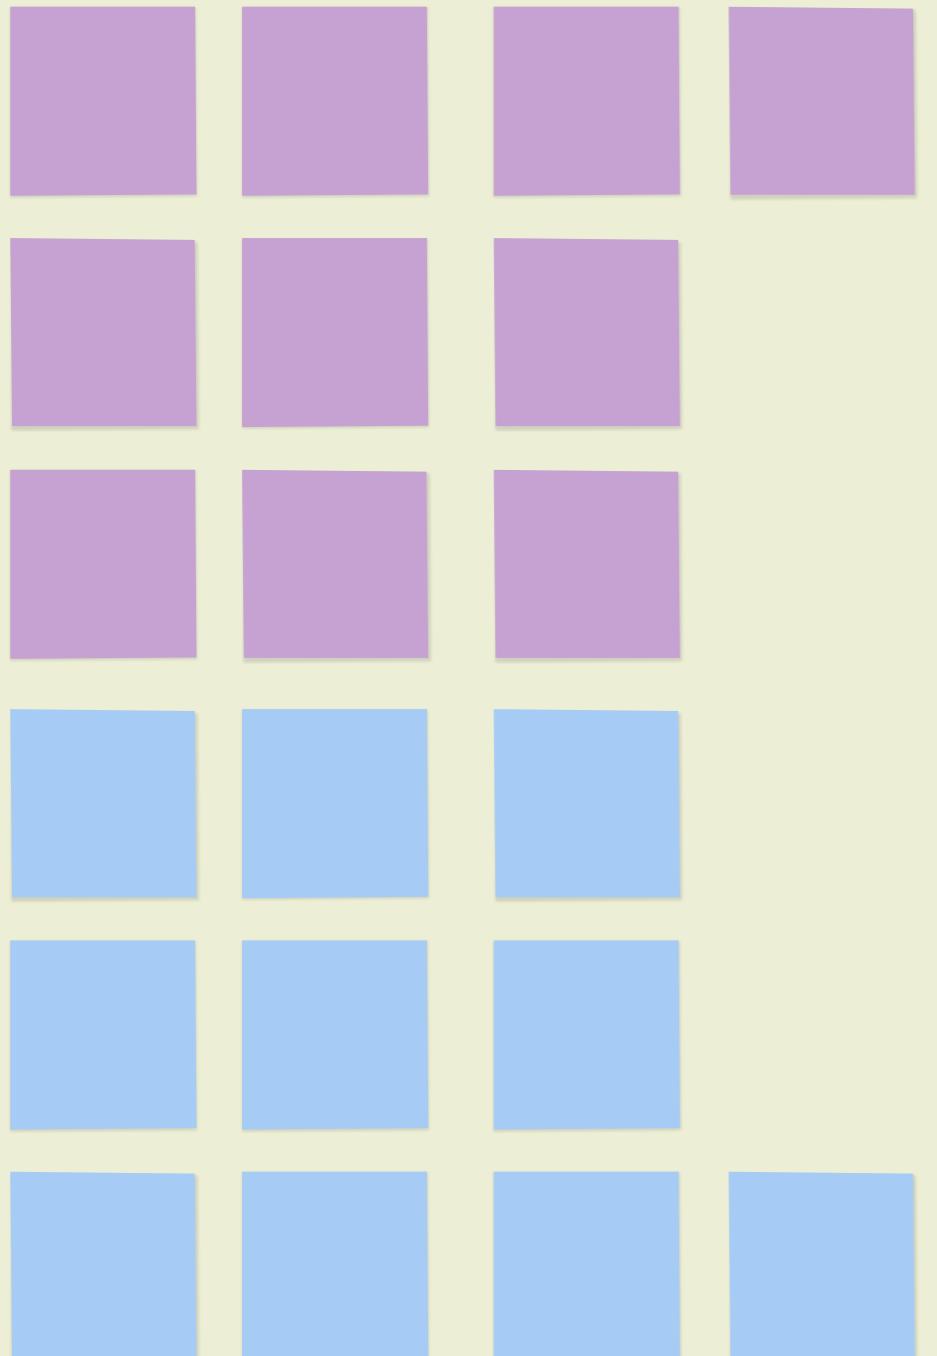

Day 2 - Idea Development:

The team sketches solutions based on the goals, and we choose the most promising idea.

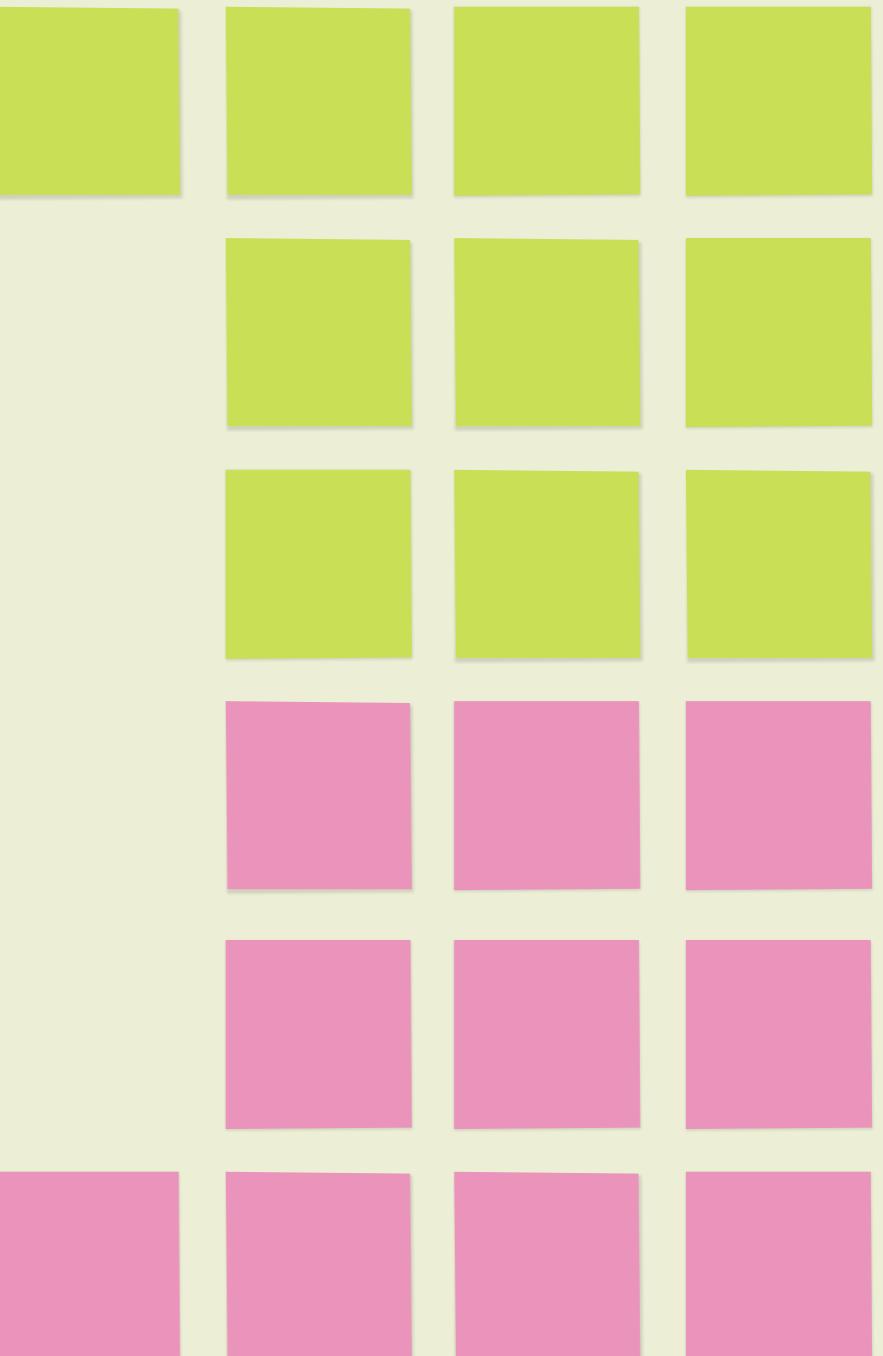

Guidelines

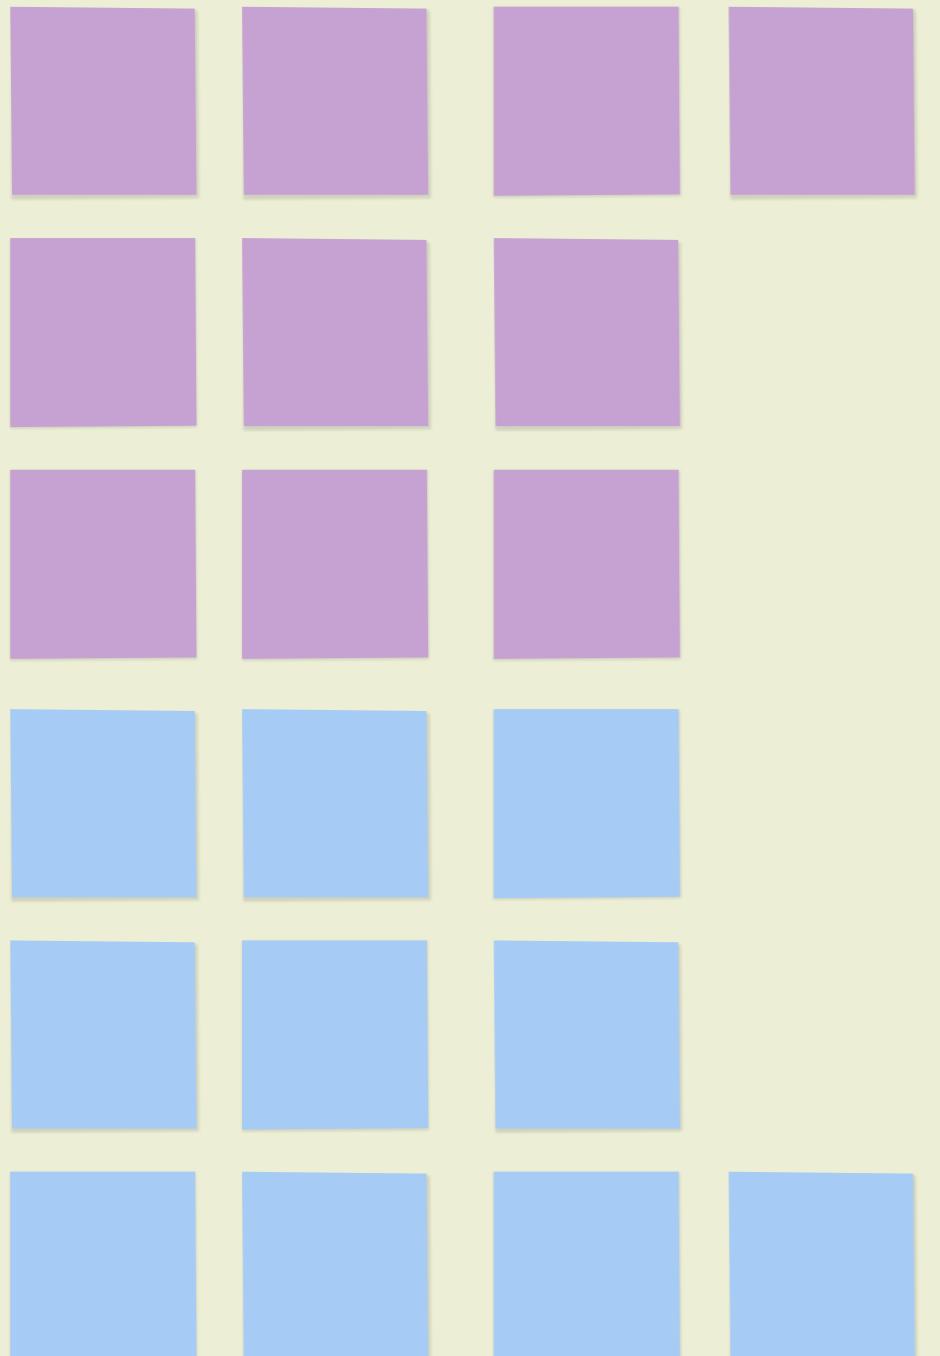

- 1. Brainstorm solutions:** Generate as many ideas as possible for each HMW question without evaluating them.
- 2. Prioritize the ideas:** Select the most relevant and feasible ideas and put them into concept cards and fill in the details.

E11EVE

Activity

Day 3 - Storyboard

Take one or more of the concepts and turn them into simple stories that explain how the user can achieve the goals since

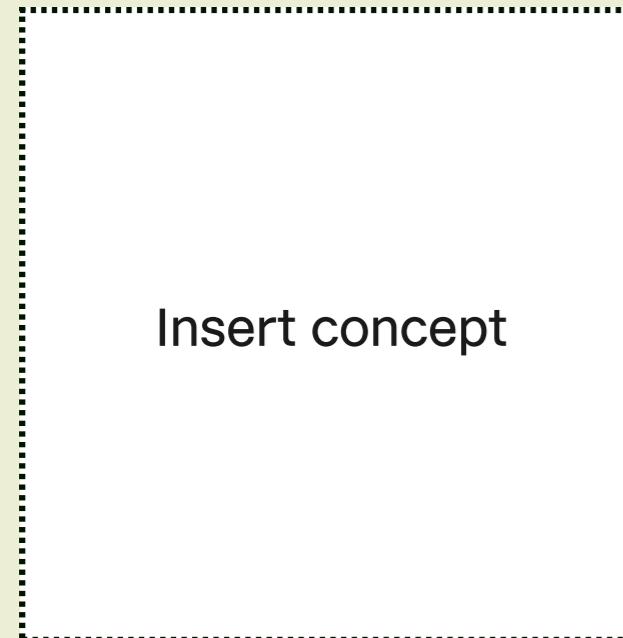

Guidelines

1. Based on the concept cards, describe the overall steps that users need to take to solve the problem.
2. Add extra comments and a narrative voice for additional information.

E11EVE

Step 1

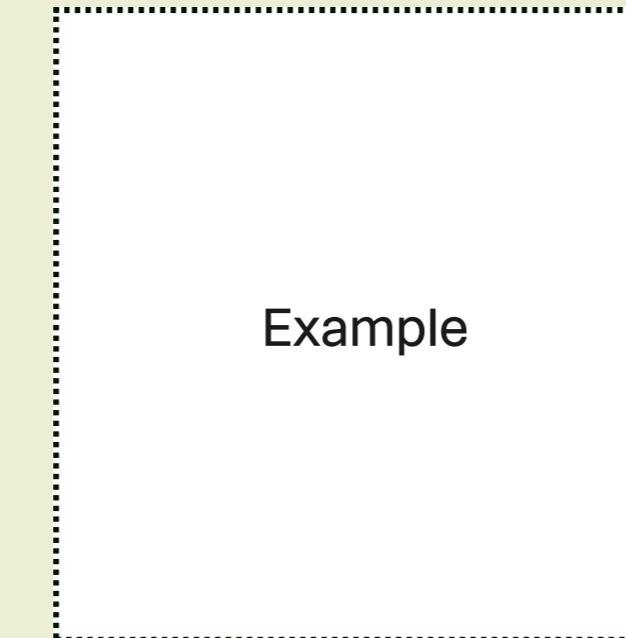

Insert concept

Describe what happens from the user's perspective

Add extra comments as voiceover

Step 2

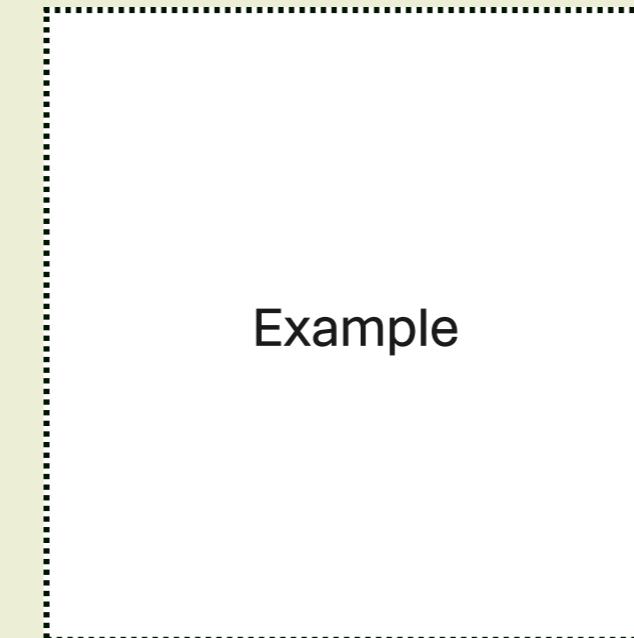

Example

Describe what happens from the user's perspective

Add extra comments as voiceover

Step 3

E11EVE

Activity

Day 4 – Building the prototype

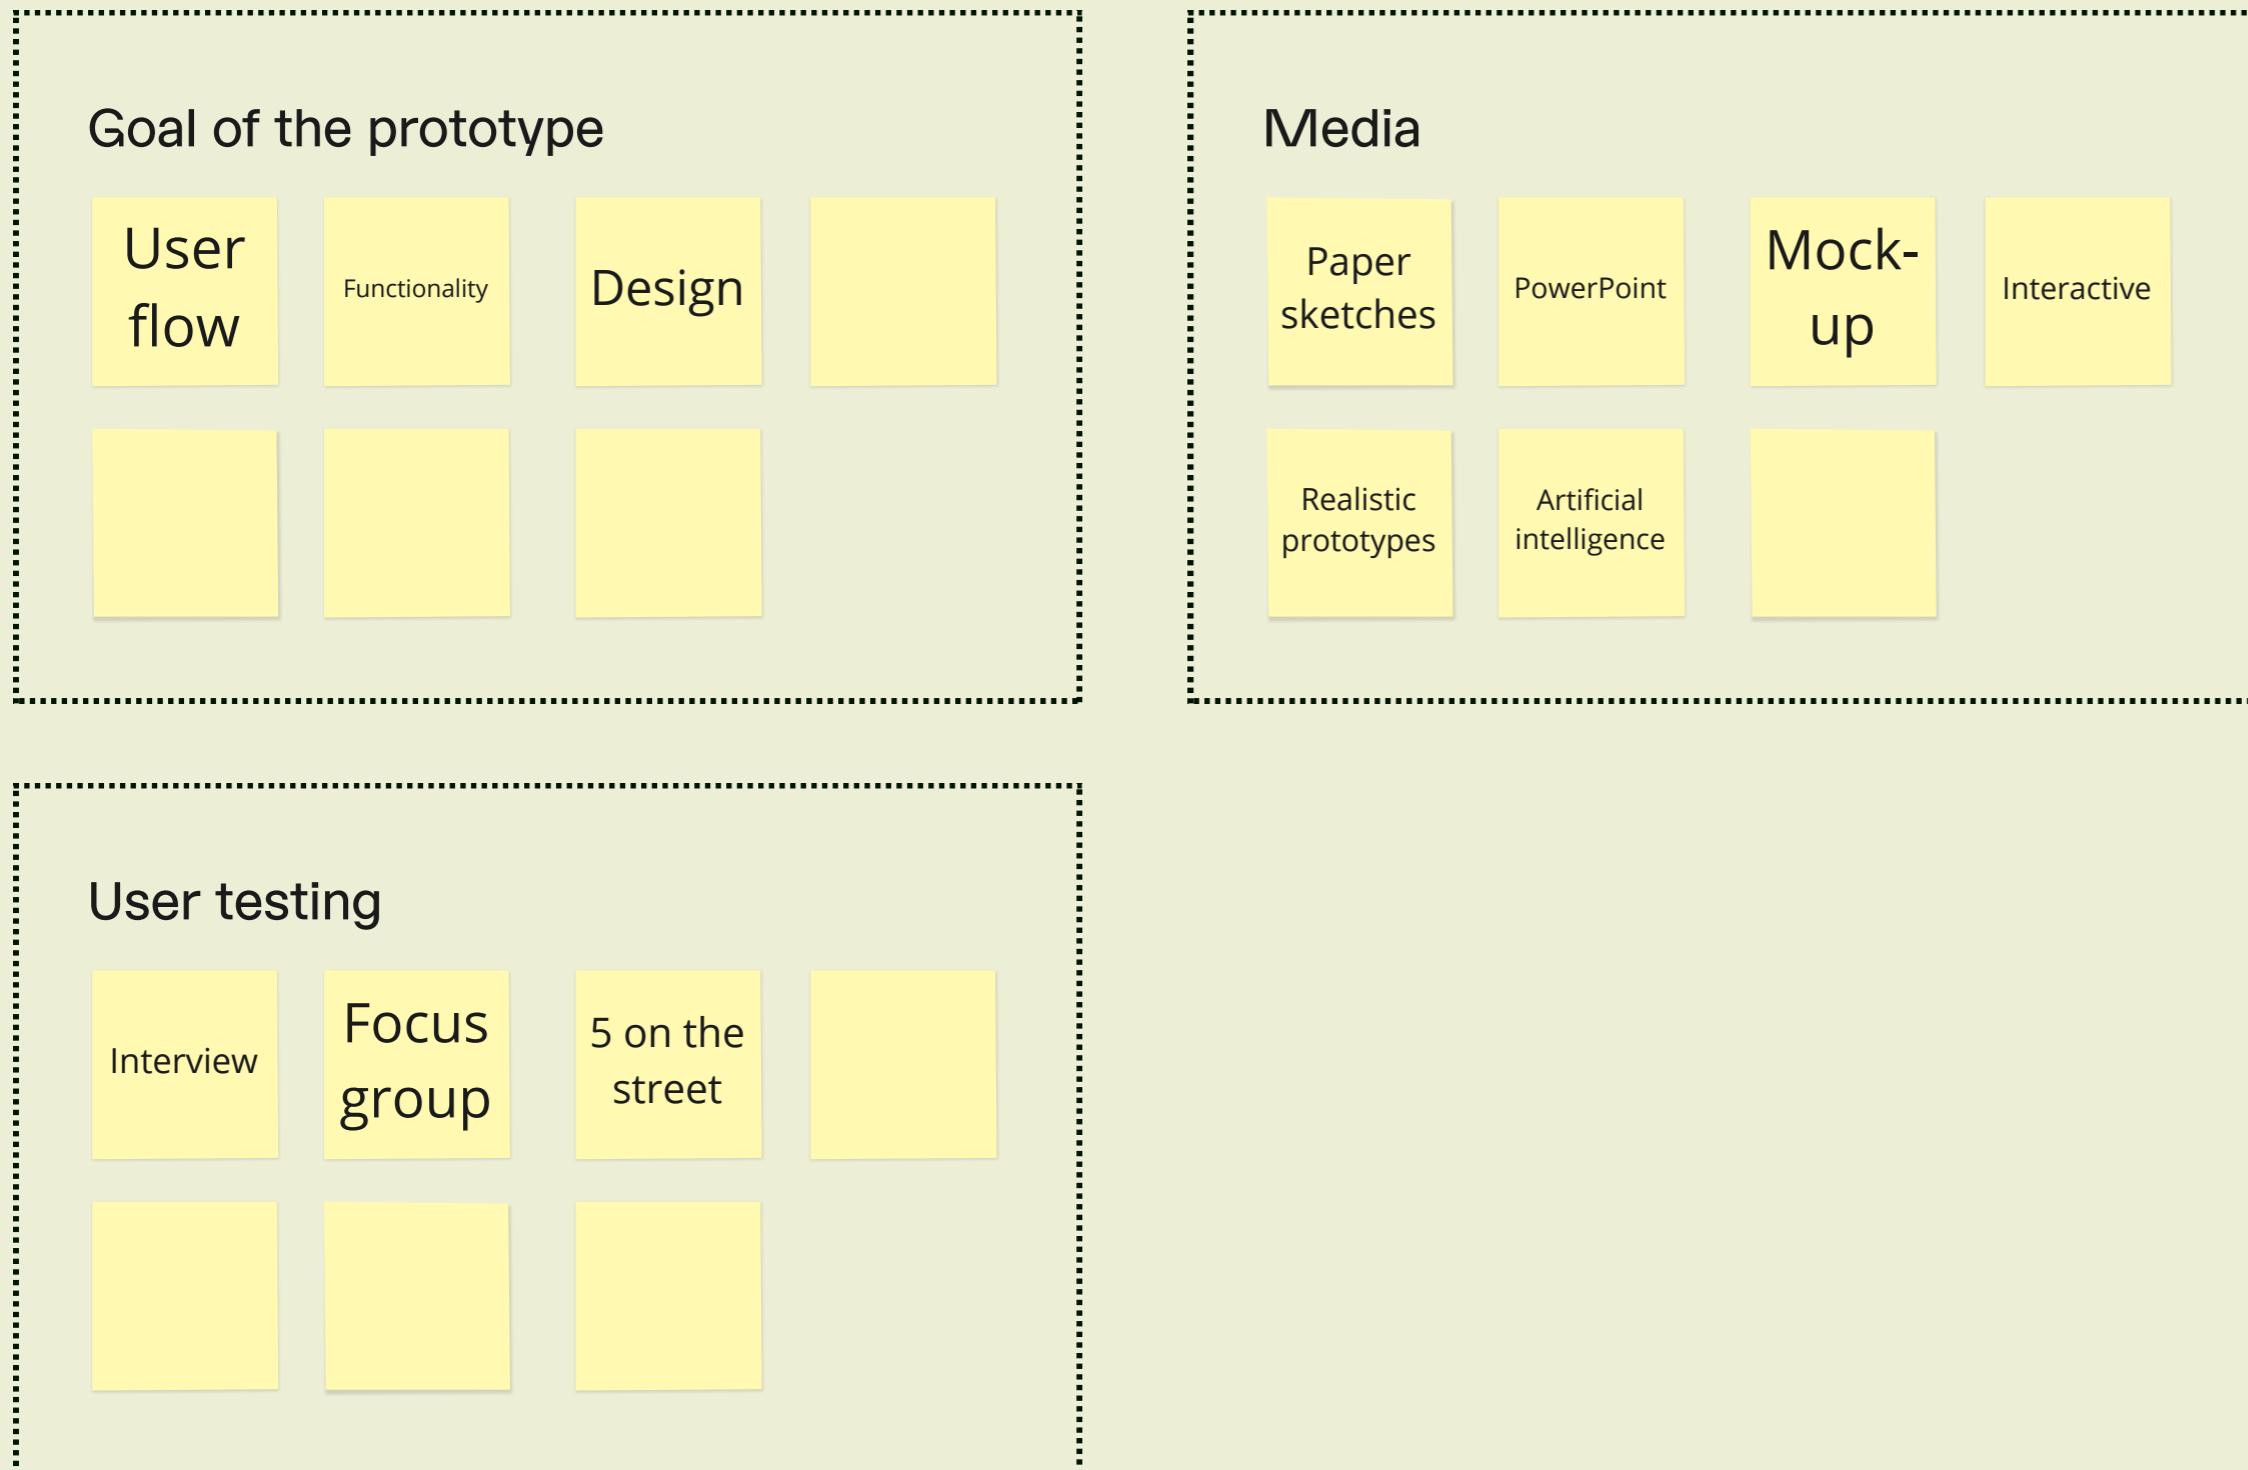

An interactive prototype is being built – either digitally, physically, or as a combination

Guidelines

1. Plan how you want to build and test the prototype
2. Base it on the storyboards and choose the most suitable medium to build the prototype
3. Use the components to visualize a mock-up or other relevant tools to build the prototype

E11EVE

ELLEVE

Paper sketches

Create interactive elements

Cut out buttons, menus, or other elements that the user can move or click on.

Use Post-it notes for things that can be swapped out (e.g., dropdown menus or popup windows).

Secure movable parts to simulate dynamics.

Tips for a good paper prototype:

Keep it simple: Don't spend too much time on details at the beginning.

Be creative: Post-it notes can become menus, and pieces of paper can become icons or buttons.

Work quickly: The goal is to learn, not to create something perfect.

Make it user-friendly: Test it as if it were real – what does the user do, and what happens next?

PowerPoint

1. Start with a sketch:

- Create each slide as a separate "screen" in your prototype.
- Draw simple wireframes or import images of your designs.

2. Add interactions:

- Use hyperlinks (PowerPoint) or links (Keynote) to connect buttons and elements to other slides.
- This gives the user a sense of navigation between screens.

Mock-up

Figma: Super popular for everything from simple sketches to advanced, interactive prototypes. Works in the browser and is easy to collaborate in real-time.

Miro: A web-based collaboration platform that functions as a digital whiteboard for teamwork and idea development.

3. Use animations:

Add simple transitions and effects to simulate interactions like dropdown menus or popup windows.

4. Test and iterate:

Present the prototype in full-screen mode and ask users to navigate as if it were a real product.

Collect feedback and make adjustments accordingly.

Interactive

Marvel: Easy to use, perfect for creating and sharing interactive prototypes quickly.

Axure RP: Ideal for more complex prototypes with advanced interactivity and dynamic elements.

Realistic prototypes

ProtoPie: Allows you to create advanced interactivity without coding. Especially good for mobile apps.

Framer: Combines design with code to create realistic prototypes. Ideal for those who want to dive a little deeper.

Artificial intelligence

Visily

Visily is an AI-driven prototyping platform that allows you to create interactive mobile and web prototypes. You can quickly transform screenshots, templates, or text descriptions into prototypes, making the design process both faster and easier.

Iizard

Iizard is an AI-driven design tool that can convert hand-drawn sketches into digital wireframes and mockups. It enables rapid prototyping by transforming simple sketches into editable designs, saving time in the early stages of product development.

Or use Elleve

UX designer

A UX designer will quickly be able to translate ideas into credible and clickable prototypes that can be tested. It is beneficial to include a designer from the start. Contact us for a quote.

Industrial designer

If the product is of a physical nature, an industrial designer can quickly create product sketches to visualize the team's ideas. Contact us for a quote.

E11EVE

Hvordan prototype på 5 dager?

Velkommen til
Prototype Sprint Workshop

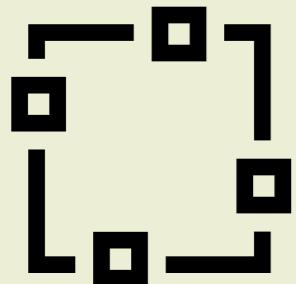

Hvorfor Prototype Sprint Workshop?

- 1. Rask problemløsning** – Løs komplekse utfordringer på 5 dager.
- 2. Brukerinnsikt** – Test ideer direkte med brukere.
- 3. Tverrfaglig samarbeid** – Samle ulike perspektiver.
- 4. Reduser risiko** – Oppdag feil før store investeringer.
- 5. Frem innovasjon** – Utforsk nye og kreative løsninger.

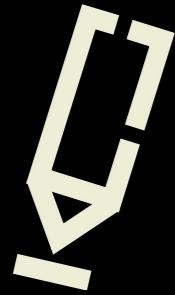

Retningslinjer

- Alle er pålogget
- Ingen forstyrrelser
- Vi holder tidsskjemaet
- Ingen diskusjoner før det er tid for det

Format: Note & vote

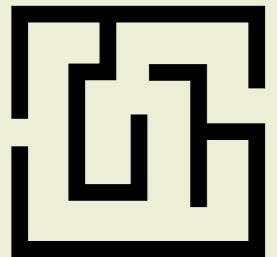

- Hver person får sin egen sticky farge og skriver selvstendig ned sine ideér
- Vi tar en runde rundt rommet og hver person leser opp sine svar
- Hver person ser gjennom de andres svar og stemmer på sine favoritter
- Diskuter og endre rekkefølge om nødvendig

Aktivitet

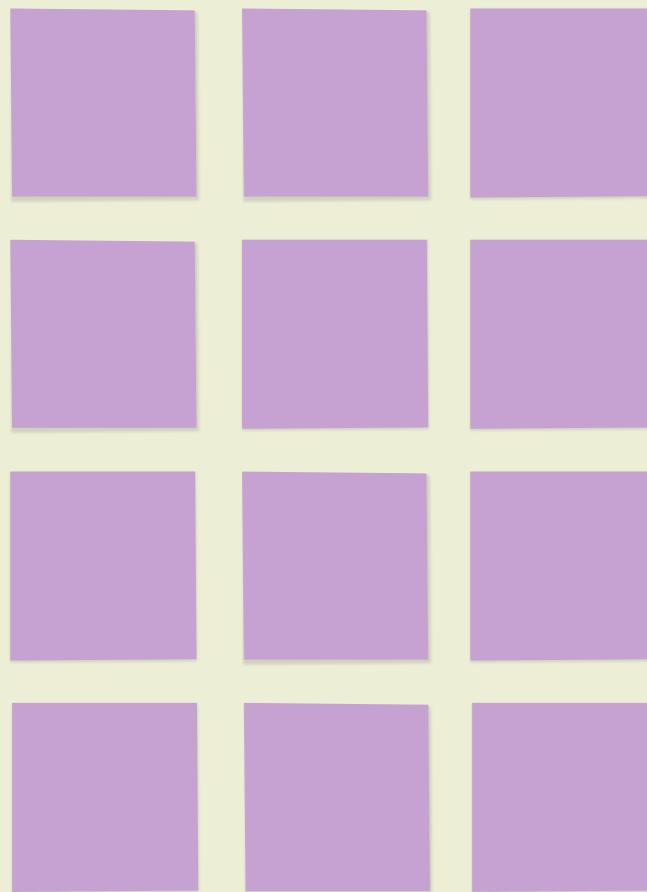

Dag 1 – Forstå og definere

Vi starter med å identifisere problemet og sette tydelige mål. Hvem er brukerne? Hva ønsker vi å oppnå?

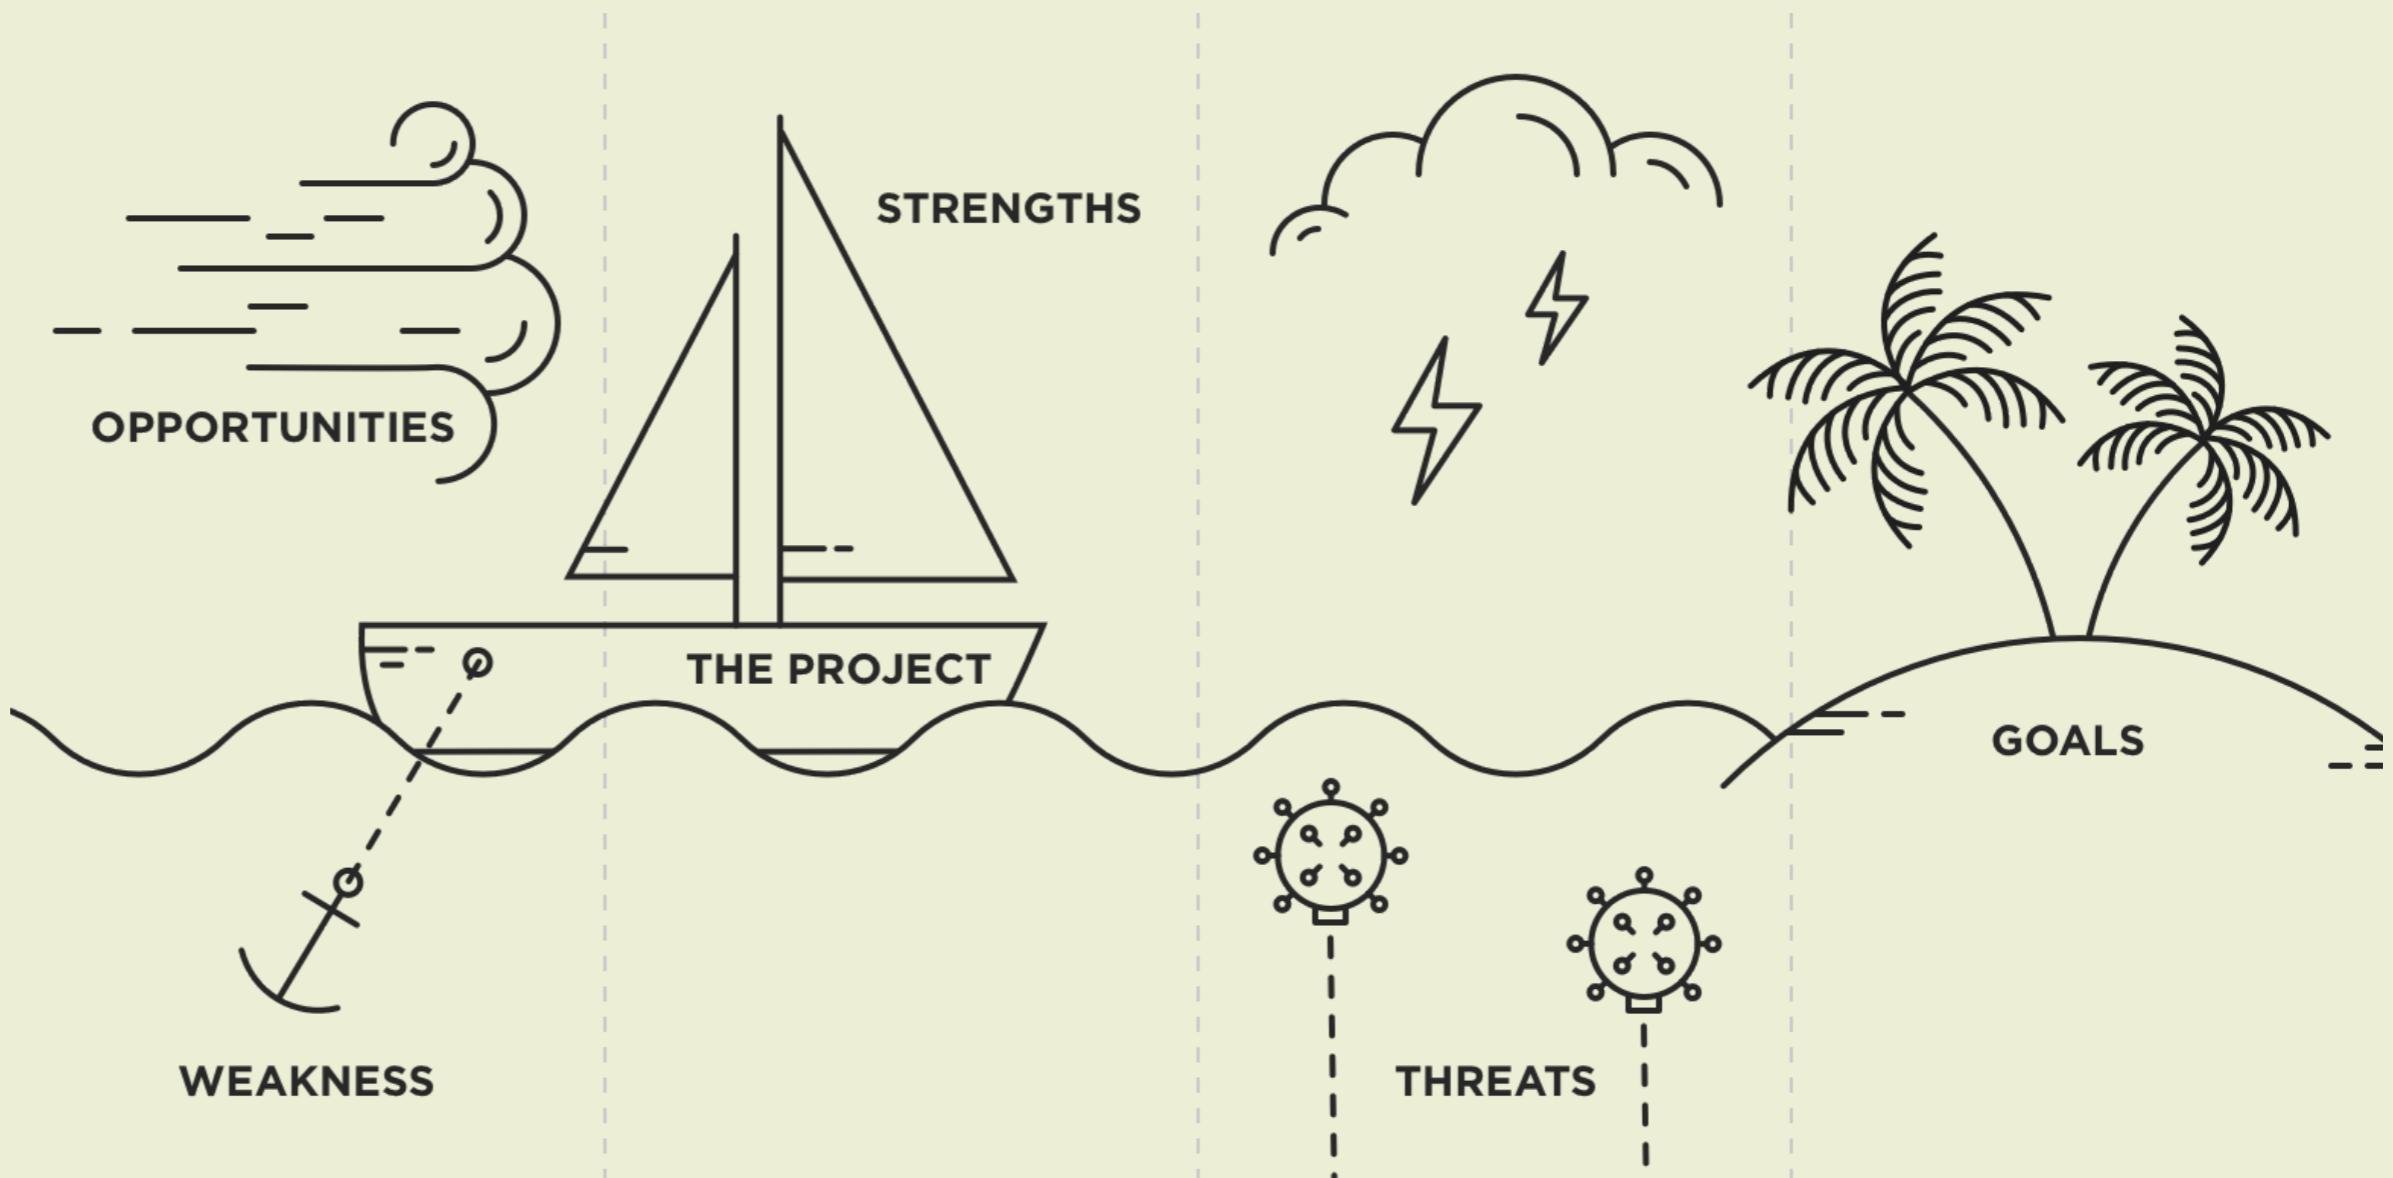

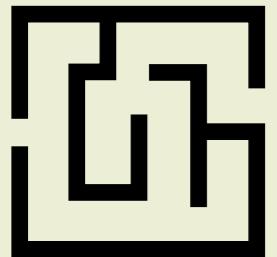

Retningslinjer

1. Bruk Seilbåt-metoden for å definere drivere, hindringer og risikoer
2. **Vind** – hva driver teamet fremover?
3. **Seilene** – styrker og fordeler
4. **Et anker** – ting som kan bremse teamet eller stoppe fremdriften
5. **Bomber** – risikoer eller potensielle fallgruver på veien
6. **Sydhavssøy** – mål og potensielle uventede gevinstar

Reflekter over
dine egentlige
mål og hva som
hindrer deg i å
oppnå dem

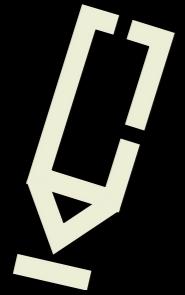

Retningslinjer

- 1. Brainstorm løsninger:** Generer så mange ideer som mulig for hvert HMW-spørsmål uten å evaluere dem.
- 2. Prioriter ideene:** Velg de mest relevante og gjennomførbare ideene og legg de inn i konsept kort og fyll ut detaljer.

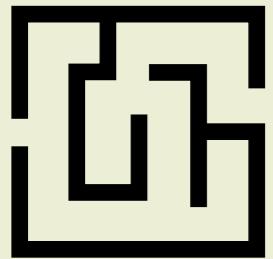

E11EVE

Aktivitet

Dag 3 – Storyboard

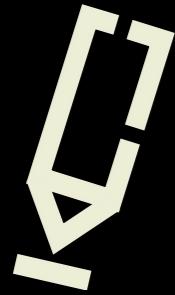

Ta ett eller flere av konseptene og gjør dem til enkle historier som forklarer hvordan brukeren kan nå målene siden

Retningslinjer

1. Med utgangspunkt i konsept kortene, beskrive overordnet stegene som brukerne må gjøre for å løse problemet.
2. Legg inn ekstra kommentarer og en fortellerstemme for ekstra informasjon.

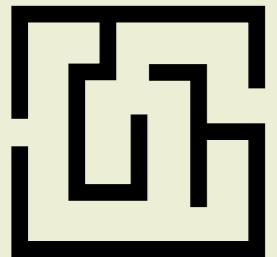

E11EVE

Aktivitet

Dag 4 – Bygge prototypen

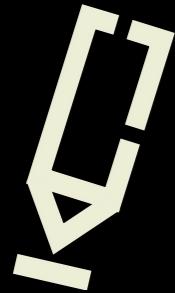

En interaktiv prototype bygges – enten digitalt, fysisk, eller som en kombinasjon

Retningslinjer

1. Planlegg hvordan du vil bygge og teste prototypen
2. Ta utgangspunkt i storyboardene og velg det mest egnede mediet for å bygge prototypen
3. Bruk komponentene til å visualisere en mock-up eller andre relevante verktøy for å bygge prototypen

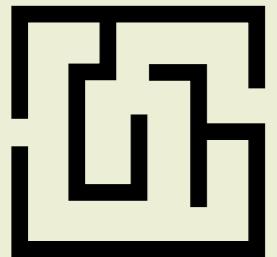

E11EVE

Aktivitet

Dag 5 – Testing og tilbakemeldinger

Vi tester prototypen på reelle brukere eller kunder og samler inn verdifull innsikt.

Retningslinjer

1. Rekrutter testdeltakere
2. Forbered testen
3. Gjennomfør testene
4. Dokumenter funnene
5. Analyser og prioriter innsiktene

Prototype Sprint Struktur

AKTIVITET

Dag 1 – Forstå og definere

Vi starter med å identifisere problemet og sette tydelige mål. Hvem er brukerne? Hva ønsker vi å oppnå?

Dag 2 – Idéutvikling

Teamet skisser løsninger basert på målene, og vi velger den mest lovende ideen.

Dag 3 – Storyboard

Ta ett eller flere av konseptene og gjør dem til enkle historier som forklarer hvordan brukeren kan nå målene siden.

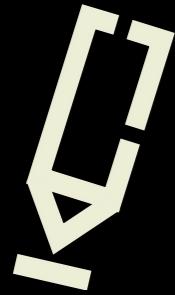

Dag 4 – Bygge prototypen

En interaktiv prototype bygges – enten digitalt, fysisk, eller som en kombinasjon.

Dag 5 – Testing og tilbakemeldinger:

Vi tester prototypen på reelle brukere eller kunder og samler inn verdifull innsikt.

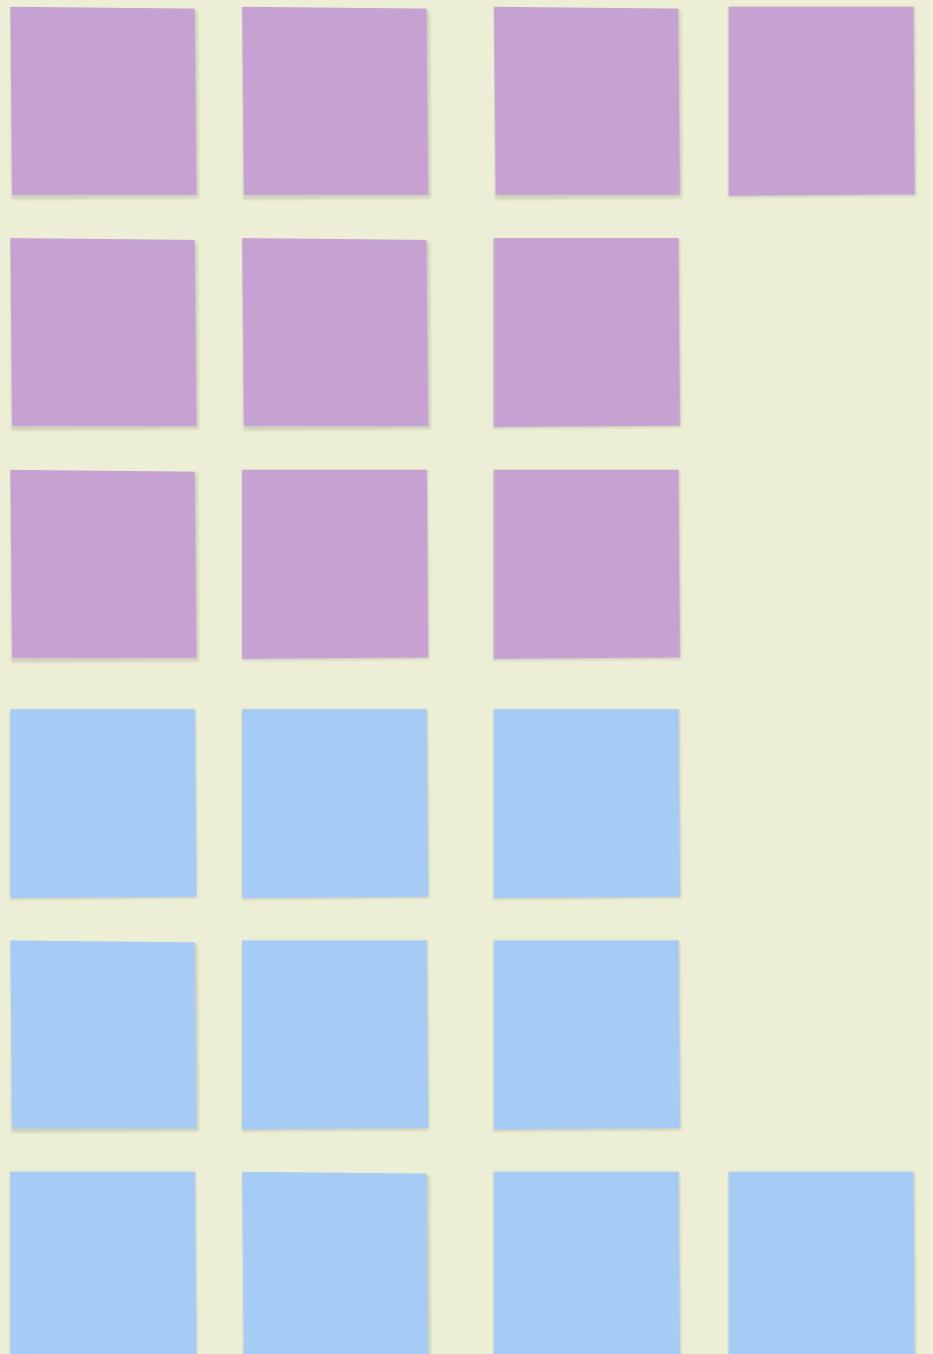

E11EVE

□

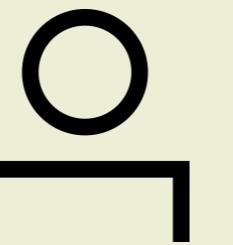

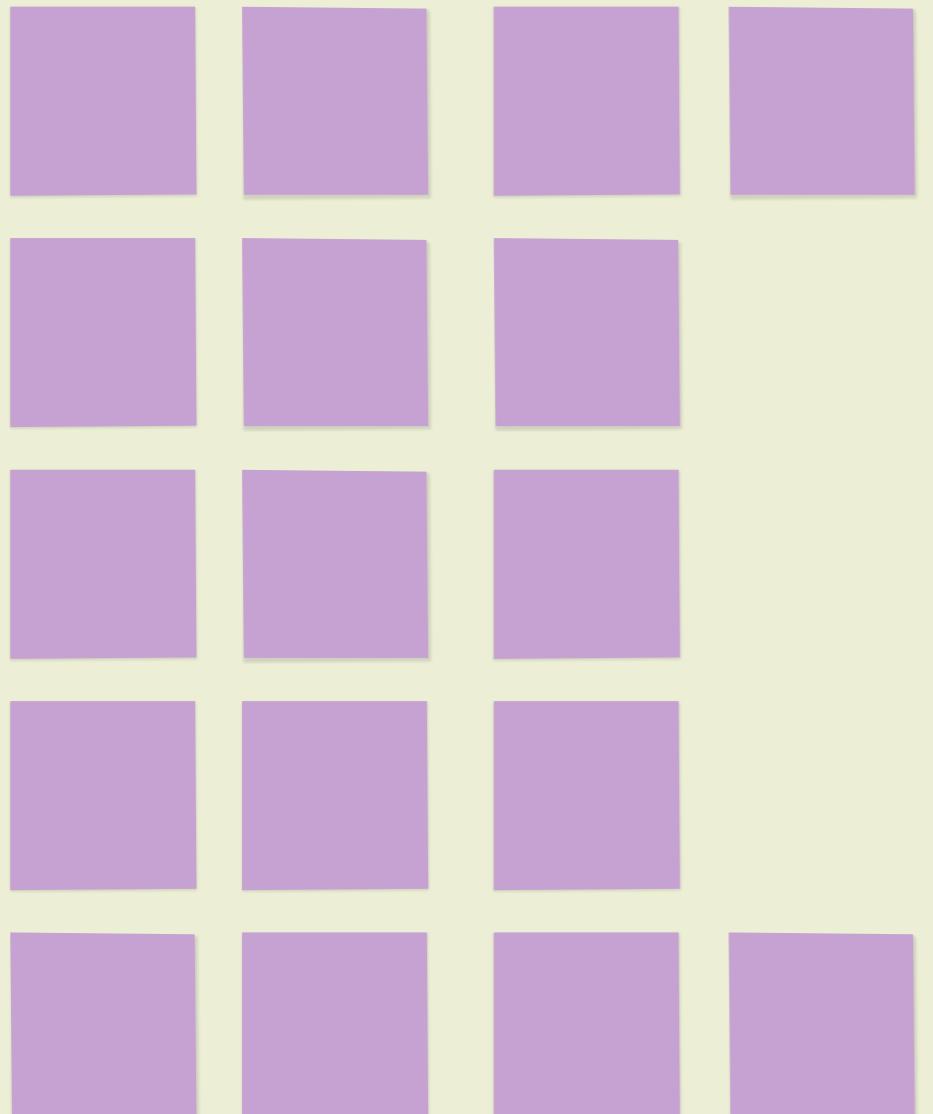

<Sett inn HMW-
spørsmål 1>

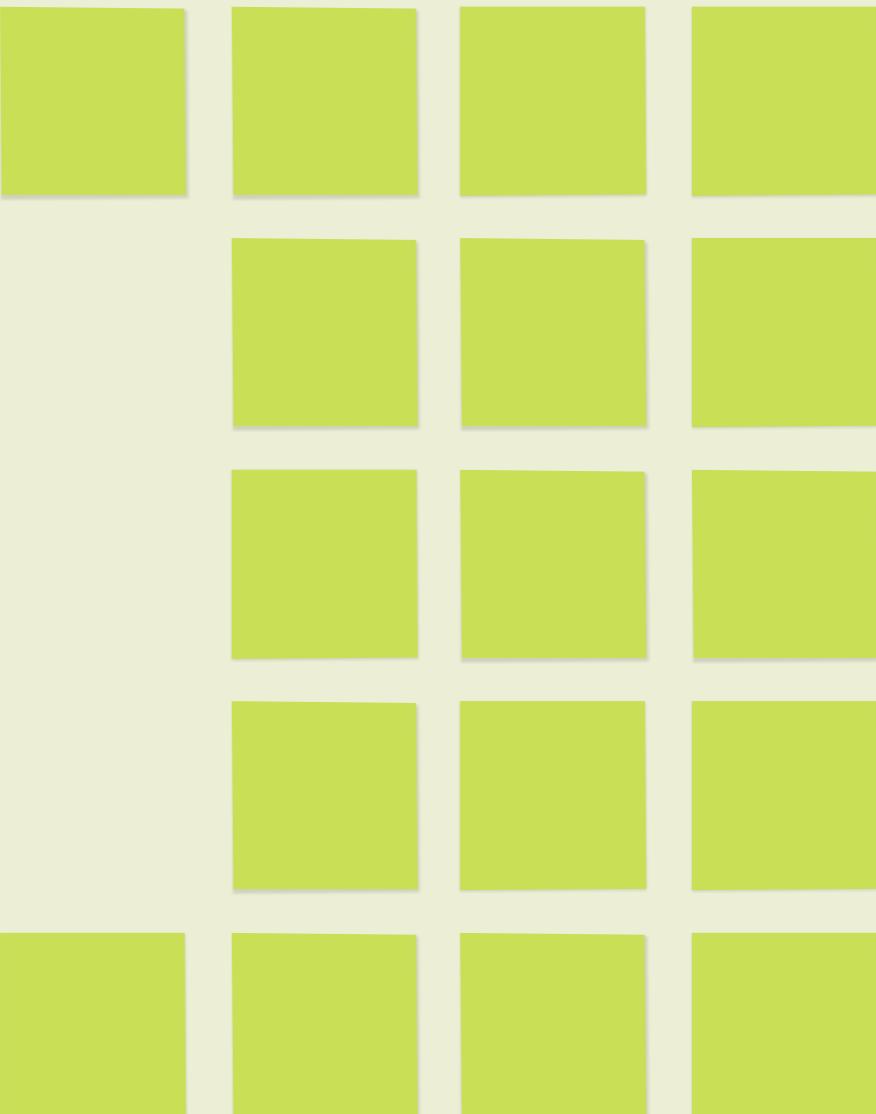

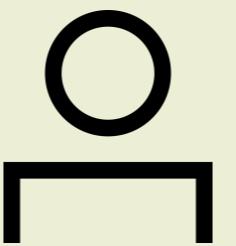

Retningslinjer

1. Skriv ned mulige målgrupper for deres selskap
2. Hver person leser sine målgrupper høyt og legger de til på tavlen. Ingen diskusjoner
3. Stem frem de viktigste målgruppene.
4. Diskuter hvorfor disse er viktige
5. Beslutningstakere konkluderer med de 3 viktigste målgruppene.

**Skriv ned
målgrupper
som passer**

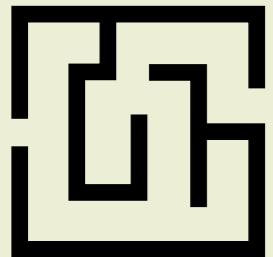

Topp 3 målgrupper

Målgruppe
2

Målgruppe
3

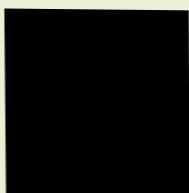

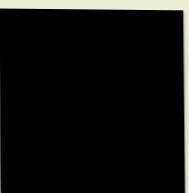

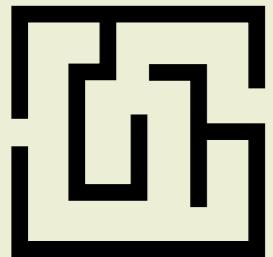

Retningslinjer - The 5 whys

- 1. Definer problemet:** Beskriv problemet klart og tydelig for alle.
- 2. Still første "Hvorfor?":** Spør hvorfor problemet oppsto og noter svaret.
- 3. Fortsett med flere "Hvorfor?":** Gjenta minst fem ganger for å nå rotårsaken.
- 4. Valider:** Bekreft rotårsaken.

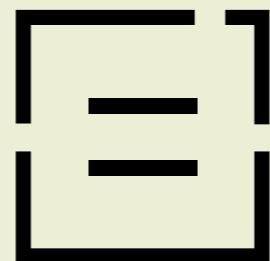

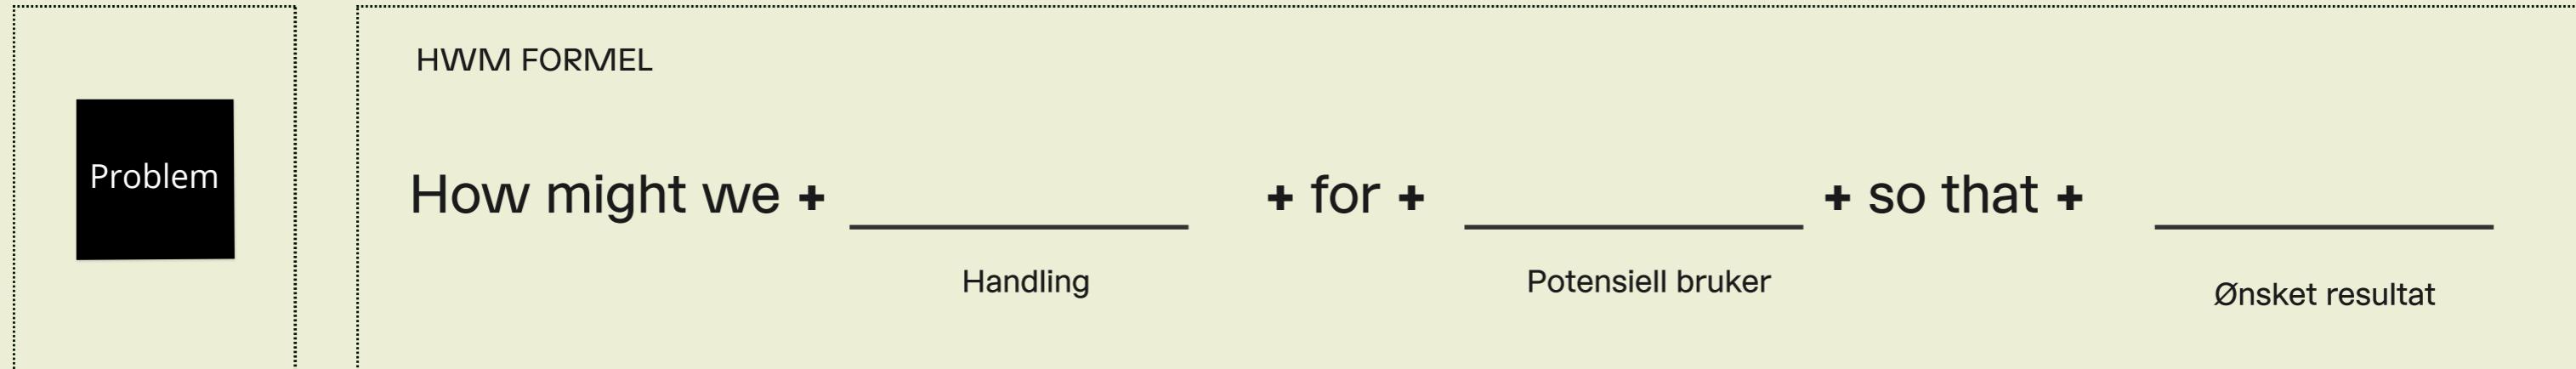

De egentlige
problemene

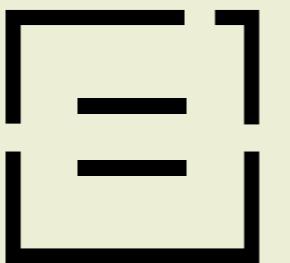

Retningslinjer - HMW (How Might We)

- 1. Bryt problemen ned i HMW-spørsmål:** Lag åpne og positive spørsmål som starter med "How might we" for å inspirere til løsninger.
2. Lag et HMW-spørsmål for hver av de egentlige problemene

How might we

ELLEVE

Papirskisser

Lag interaktive elementer

Klipp ut knapper, menyer eller andre elementer som brukeren kan flytte eller trykke på.

Bruk Post-it-lapper for ting som kan byttes ut (f.eks. dropdown-menyer eller popup-vinduer).

Tape fast bevegelige deler for å simulere dynamikk.

Tips for en god papirprototype:

Hold det enkelt: Ikke bruk for mye tid på detaljer i starten.

Vær kreativ: Post-it-lapper kan bli til menyer, og papirbiter kan bli ikoner eller knapper.

Jobb raskt: Målet er å lære, ikke lage noe perfekt.

Gjør det brukervennlig: Test det som om det var ekte – hva gjør brukeren, og hva skjer videre?

PowerPoint

1. Start med en skisse:

- Lag hvert lysbilde som en egen "skjerm" i prototypen din.
- Tegn enkle wireframes eller importer bilder av designene dine.

2. Legg til interaksjoner:

- Bruk hyperkoblinger (PowerPoint) eller lenker (Keynote) for å koble knapper og elementer til andre lysbilder.
- Dette gir brukeren en følelse av navigasjon mellom skjermer.

3. Bruk animasjoner:

Legg til enkle overganger og effekter for å simulere interaksjoner som rullegardinmenyer eller popup-vinduer.

4. Test og iterer:

Presenter prototypen i fullskjermmodus og be brukere navigere som om det var et ekte produkt.

Samle inn tilbakemeldinger og gjør justeringer deretter.

Mock-up

Figma: Superpopulært for alt fra enkle skisser til avanserte, interaktive prototyper. Fungerer i nettleseren og er lett å samarbeide i sanntid.

Miro: Nettbasert samarbeidsplattform som fungerer som et digitalt whiteboard for teamarbeid og idéutvikling.

Interaktiv

Marvel: Enkelt å bruke, perfekt for å lage og dele interaktive prototyper raskt.

Axure RP: Ideelt for mer komplekse prototyper med avansert interaktivitet og dynamiske elementer.

Realistiske prototyper

ProtoPie: Lar deg lage avansert interaktivitet uten å kode. Spesielt bra for mobilapper.

Framer: Kombinerer design med kode for å lage realistiske prototyper. Ideelt for deg som vil dykke litt dypere.

Justinmind: Et alt-i-ett-verktøy for app-prototyper med funksjoner som kan simulere skikkelig brukeropplevelse.

Kunstig intelligens

Visily

Visily er en AI-drevet prototypingplattform som lar deg lage interaktive mobil- og webprototyper. Du kan raskt omdanne skjermbilder, maler eller tekstbeskrivelser til prototyper, noe som gjør designprosessen både raskere og enklere.

Iizard

Iizard er et AI-drevet designverktøy som kan konvertere håndtegnede skisser til digitale wireframes og mockups. Det muliggjør rask prototyping ved å transformere enkle skisser til redigerbare design, noe som sparer tid i de tidlige fasene av produktutviklingen

Eller bruk Elleve

UX designer

En UX designer vil raskt kunne omsette ideene til troverdige og klikkbar prototype som kan testes. Det er forde å inkludere designer fra starten. Ta kontakt for et tilbud.

Industri designer

Om produktet er av fysisk karakter kan en industridesigner raskt lage produkt skisser for å visualisere ideene til teamet. Ta kontakt for et tilbud
