

ROOF COATINGS

ROOF COATINGS CAN EXTEND, PROTECT, MAINTAIN YOUR ROOF.

Investing in a new roof coating not only protects your property but also offers long-term financial and environmental benefits.

When appropriate, a roof coating system can extend the useful life of your roof asset that has not yet reached failure.

What are the benefits to a roof coating?

Extended Roof Life: A new roof coating can significantly extend the life of your roof by protecting it from weather elements such as UV rays, rain, and wind.

Cost Savings: Coatings help reduce energy consumption costs by reflecting sunlight and heat away from the building.

Enhanced Protection: Coatings act as a barrier against moisture, reducing leaks and water damage which can be costly to repair.

Improved Aesthetics: A roof coating can enhance the appearance of your roof, making your property look well-maintained and increasing its curb appeal.

Environment: Application of the roof coating delays the need for a roof replacement, including existing roof removal and disposal. This reduces waste to the landfill and associated fees.

Regulatory Compliance: Most roof coatings meet specific building code requirements or qualify for energy efficiency incentives and certifications.
