

# AlgoVerde **Frequently Asked Questions**

## What is AlgoVerde and how is it different from an AI chatbot like ChatGPT?

Think of AlgoVerde as your complete product development command center, not just another chatbot. We've built a platform that transforms how you create and launch products by turning scattered market data into clear, actionable insights in real-time.

Here's what makes us different: while ChatGPT is great for conversations, we're laser-focused on helping you develop winning products faster. We compress what used to take months of research and validation into just weeks. Instead of juggling multiple tools and disconnected processes, you get one integrated platform that guides you from initial idea to market-ready product with confidence.

## Why should I use AlgoVerde rather than an off-the-shelf LLM?

Generic AI tools give you answers. AlgoVerde gives you a complete product development advantage. We've purpose-built our platform specifically for product teams who need to move fast and get it right.

Instead of trying to piece together multiple tools and figure out how to apply generic AI to your specific challenges, you get tailored workflows, customizable personas, and integrated intelligence that plugs directly into your product development process. One platform replaces your entire research and validation toolkit, with built-in security and industry-specific optimization.

## What are GenAI Personas and how do they work?

GenAI Personas are like having your customer focus groups available for conversations 24/7. These aren't just data points – they're virtual representations of customer segments you can actually talk to and learn from.

Here's the game-changer: instead of waiting months to schedule interviews or conduct focus groups, you can instantly dive deep into customer motivations, test product concepts, and understand the "why" behind buying decisions. These personas draw from real behavioral patterns and respond just like your actual customers would. You get reliable insights in days, not months, and can iterate on ideas in real-time. On top of that, our customer typically save about 75% of their market research costs.

## How do you know the GenAI Personas are "working" as intended?

We've got solid proof they work. Multiple academic studies show these virtual personas mirror real customer behavior with remarkable accuracy. The technology combines advanced data modeling with behavioral algorithms to create realistic customer simulations.

What's really exciting is that these personas learn from anonymized real user data, so they reflect genuine market behavior. We're constantly monitoring the latest research, and the accuracy keeps improving. For the best results, we recommend using these synthetic insights alongside some targeted real customer conversations – it's a powerful combination that gives you comprehensive market intelligence.

## How do you ensure the GenAI Personas responses are accurate?

The research backing is rock-solid. Leading institutions like Harvard Business School and Cornell University have published studies proving synthetic personas closely match real customer behavior. We're talking about 90% alignment with traditional research methods in our deployments.

The field is evolving rapidly, and we stay on top of every breakthrough. What started as promising research has become proven methodology that delivers consistent, reliable insights. We continuously validate our results against real-world outcomes, so you can trust the intelligence you're getting.

## I still have doubts ... How can we trust the AlgoVerde GenAI Personas? How do you know their responses are accurate?

Our real-world deployments consistently validate what academic research has been proving – these personas deliver reliable, actionable insights. Across every experiment and customer deployment, we see 90% alignment between synthetic insights and traditional research methods.

But here's what really matters: our customers are making confident product decisions and seeing measurable results. The proof isn't just in the studies – it's in the successful product launches and improved market performance our clients achieve.

## How do you handle proprietary data?

Your data security is non-negotiable for us. We've built enterprise-grade protection into every layer of our platform, with the flexibility to use whichever AI models work best for your specific needs.

Here's how we keep your information safe: We create completely fenced environments where you can deploy AlgoVerde in your own secure private instance. Your data never gets used to train underlying AI models, and there are zero data leakages. If you have concerns about specific AI models, we simply exclude them from your deployment. It's your data, your rules, your security.

## Where is AlgoVerde deployed?

We're powering innovation across industries that demand precision and speed. From automotive companies launching new vehicle features to CPG brands developing consumer products, from financial services creating new offerings to educational institutions understanding student needs – AlgoVerde has already delivered tangible results, i.e. real-time market intelligence and spot-on product recommendations, wherever customer-centric innovation matters.

Each deployment proves that our platform adapts to unique industry requirements while delivering consistent value across diverse market conditions.

## What ROI can I expect?

You'll see a 75% reduction in both cost and time compared to traditional product development methods. That's measurable impact you can take to the bank.

But the real value goes beyond the numbers. You'll make more confident product decisions, develop stronger customer focus, and accelerate your entire innovation cycle. When you can validate ideas in weeks instead of months, you're not just saving money – you're gaining competitive advantage and market timing that translates directly to revenue growth.

## How do we engage with AlgoVerde?

Let's start with a conversation. Reach out to us, and we'll show you exactly how AlgoVerde works with a personalized demo of our platform.

We can also organize a strategic workshop with your leadership team to identify which business priorities AlgoVerde can address most effectively. Most of our customers begin with a customized pilot deployment to experience the value firsthand, then upgrade to annual subscriptions once they see the results. We're focused on proving value before asking for long-term commitments.
