01

What it does.

Ghostfill shows your product being used, right on your landing page. A form types itself letter by letter, a dropdown opens and picks, a calendar chooses the day, chips light up, a switch flips, line items add up with discount and tax, and a button is pressed. A success message appears, and the demo starts again.

Halfway through: the calendar picks the drop-off day.

- Six kinds of field: Text, Number, Dropdown, Toggle, Date and Chips, half or full width.
- Optional line items with quantity and price; subtotal, discount, tax and total computed and rounded like an invoice.
- Money, numbers and dates in any locale and currency, with Intl, the number formats built into every browser.
- A fake pointer that glides from field to field and clicks, or a fingertip tap for phone screens.
- Four frames: a window, a browser with its address bar, a phone, or no frame.
- Light, dark or automatic; your colours, accent, corners, density and fonts.
- Real text, not a video: sharp at any size, light, and edited in the property panel.

It starts when it scrolls into view, stops when it leaves, and pauses while the mouse is over it. The page served to visitors, the Framer canvas and reduced motion all show the finished screen, with the total and the message.

02

Install.

1. After payment, the confirmation page shows your component link. Copy it and keep it safe: it appears only on that page, not in the email receipt.
2. Open your Framer project and click the canvas.
3. Paste with Cmd+V (Ctrl+V on Windows). Ghostfill appears on the canvas, with its properties in the panel on the right.
4. Write your own **Fields**, **Items** and texts. The bike workshop quote it starts with is only an example.

> TIP
> To add another Ghostfill, paste the link again or duplicate the layer. Every copy keeps its own settings.

03

Size and layout.

Give Ghostfill a width (fixed or Fill); its height follows the content, so the screen never jumps while it fills in. 960 px is the starting width.

The layout follows the width of the screen itself:

- 700 px and wider, with line items on: fields on the left, line items and totals on the right.
- 440 px and wider: fields in two columns (Half fields side by side, Full fields across).
- Narrower: one column, and each line item shows its quantity and price under its name.

The **Font** property sets the family and the base size; every other size follows it. **Density** Compact makes fields and gaps smaller for tight spaces. With **Frame** Phone, the phone is **Phone Width** wide (340 px to start) and centred in the component.

04

Fields.

Each field in **Fields** has these settings.

SETTING	WHAT IT DOES
Label	The small title above the field.
Type	Text, Number, Dropdown, Toggle, Date or Chips.
Value	What the field ends up with (see below).
Options	Dropdown and Chips: the choices, separated by commas.
Placeholder	Shown before the field is filled. For a Toggle, the text next to the switch.
Prefix, Suffix	Short texts around the value, such as $ or kg.
Width	Half or Full.

What **Value** means for each type:

- **Text**: the text that gets typed, letter by letter, with a blinking text cursor.
- **Number**: the digits that get typed (4200); once typed, they are shown in the locale's format (4,200 or 4.200).
- **Dropdown**: the option chosen. The list opens, the choice is highlighted, clicked, and the list closes.
- **Toggle**: on or off. With on, the switch flips; with off it stays as it is.
- **Date**: the day chosen, written YYYY-MM-DD (2026-11-14). A calendar of that month opens and picks the day.
- **Chips**: the chips chosen, separated by commas. They light up one by one.

> TIP
>
> Keep fields short and the text realistic: names, emails and amounts your visitors recognise. Use addresses ending in .example for emails and websites, so no real inbox is shown.

05

Line items and totals.

With **Line Items** on, a table of **Items** follows the fields: each has a name, a **Quantity** and a **Price**.

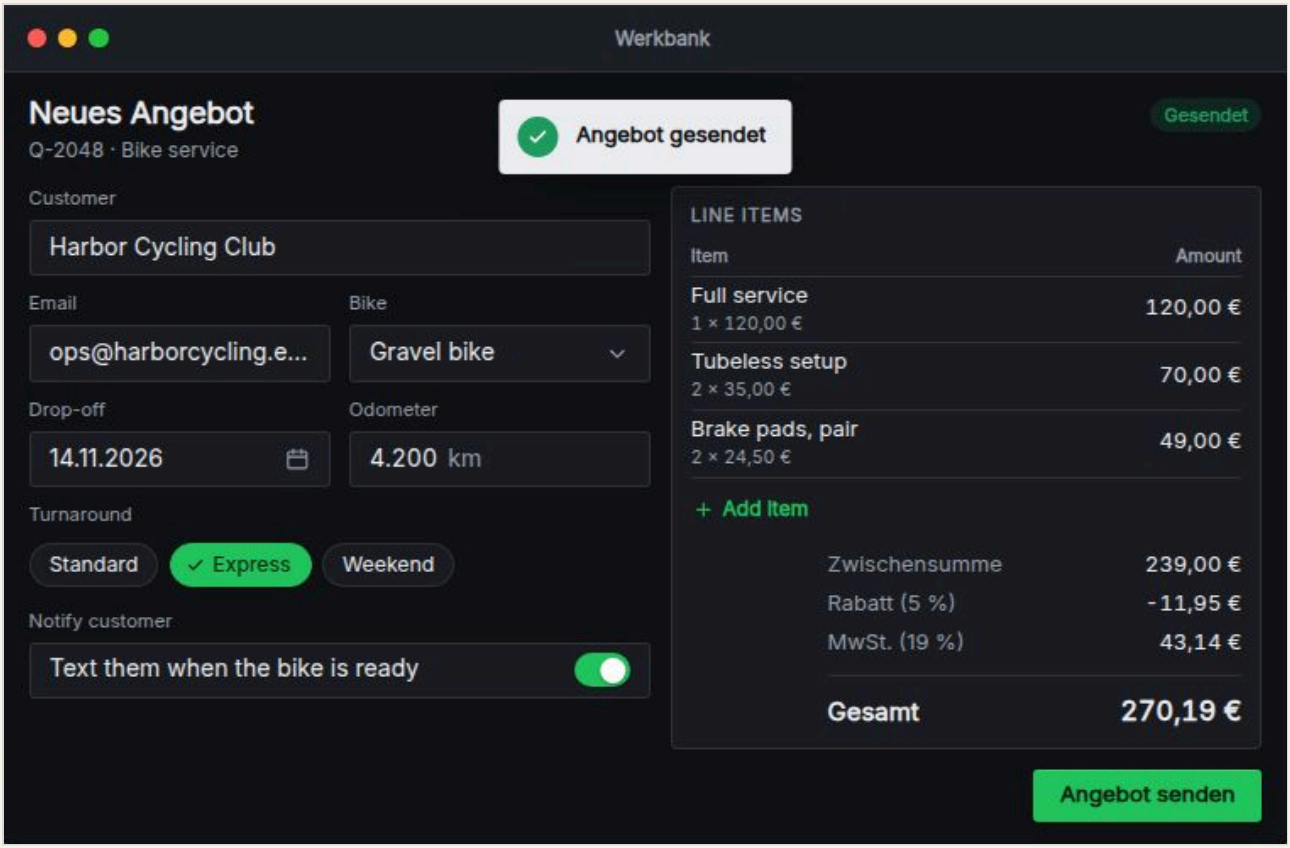

During the demo, the pointer clicks Add item, the name is typed, quantity and price appear, and the amount and the totals count up to their new values. Empty rows wait as faint lines, so the screen keeps its height.

The totals are worked out like an invoice:

1. Each line: quantity × price, rounded to the currency's smallest unit (cents, or whole yen).
2. **Subtotal**: the sum of the lines.
3. **Discount**: Discount % of the subtotal, rounded. 0 hides the line.
4. **Tax**: Tax % of the subtotal minus the discount, rounded. 0 hides the line.
5. **Total**: subtotal - discount + tax, so the figures always add up on screen.

Example from the demo: $239.00 - 10% ($23.90) = $215.10; 8% tax = $17.21; total $232.31.

Locale and **Currency** decide how money, numbers, percentages and dates look: en-US gives $1,234.56 and Nov 14, 2026; en-GB with GBP gives £1,234.56 and 14 Nov 2026; de-DE with EUR gives 1.234,56 € and 14.11.2026; ja-JP with JPY gives ￥1,235. The calendar starts its weeks on Sunday or Monday as the locale does. Rename Subtotal, Discount, Tax (VAT, GST, MwSt.), Total and the table headings in **Texts**.

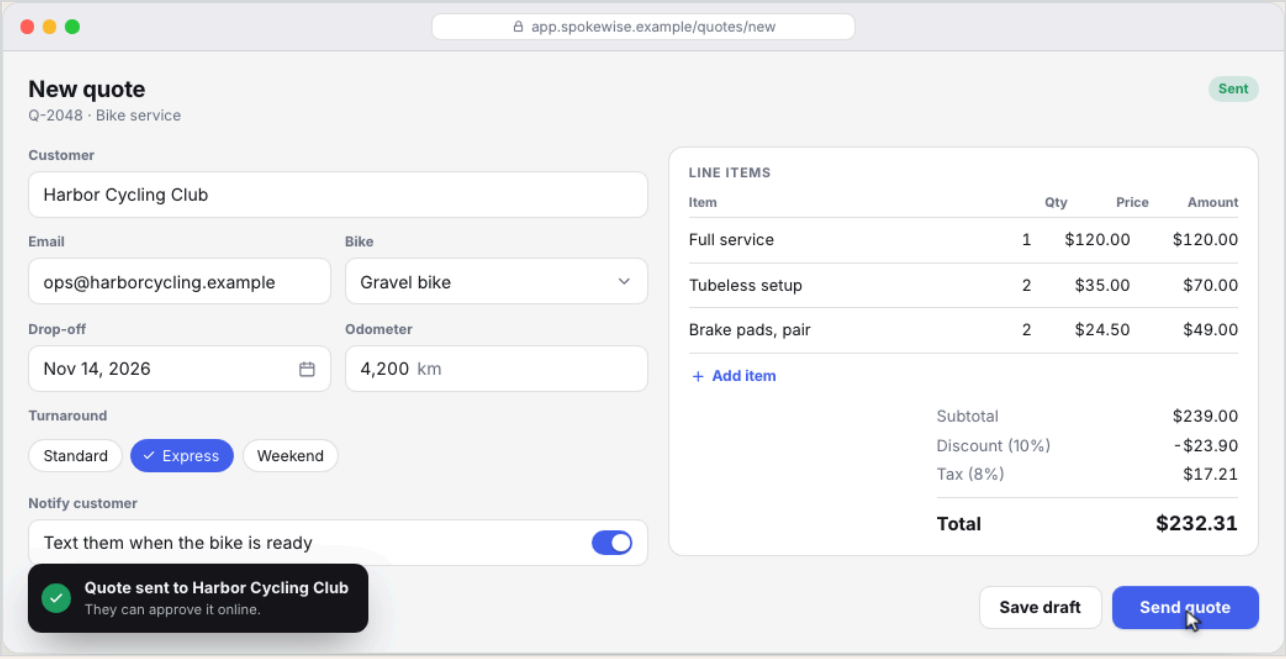

Locale de-DE, EUR, dark theme, Compact density and no pointer, on the Framer canvas.

06

The finish.

After the last field and item, the pointer presses **Button**: it sinks, shows “Sending…” with a small spinner, and then the **Message** appears with its **Message Note**, while **Status** changes to **Status After** (Draft → Sent).

- **Message At** Bottom puts the message at the bottom left, clear of the buttons; on narrow screens it is centred. Top puts it at the top centre, below the status bar on a phone.
- **Second Button** is a quieter button next to the main one (Save draft, Back). It is never pressed. Empty hides it.
- **At the End** Loop holds the finished screen for **Hold** seconds, fades it, and starts again with an empty form. Stay keeps the finished screen and stops.

The finished quote: total, message, status Sent and the pointer on the button.

---

0 7

Timing and playback.

- **Typing**: letters per second (24 to start). The rhythm varies a little, like a person typing.
- **Pause**: the wait between one field and the next.
- **Delay**: the wait after the demo scrolls into view.
- **On Hover**: Pause stops everything while the mouse is over the demo, so visitors can read it; Play ignores the mouse.

The demo only runs while at least a quarter of it is visible, and only while the browser tab is open in front. Scrolled away, it stops exactly where it was and continues when it comes back. A demo further down the page empties itself quietly when the page opens, so the visitor sees it fill in from the start.

The default quote takes about 20 seconds from the first letter to the message. To make it shorter, use fewer fields or items, raise Typing, or lower Pause.

---

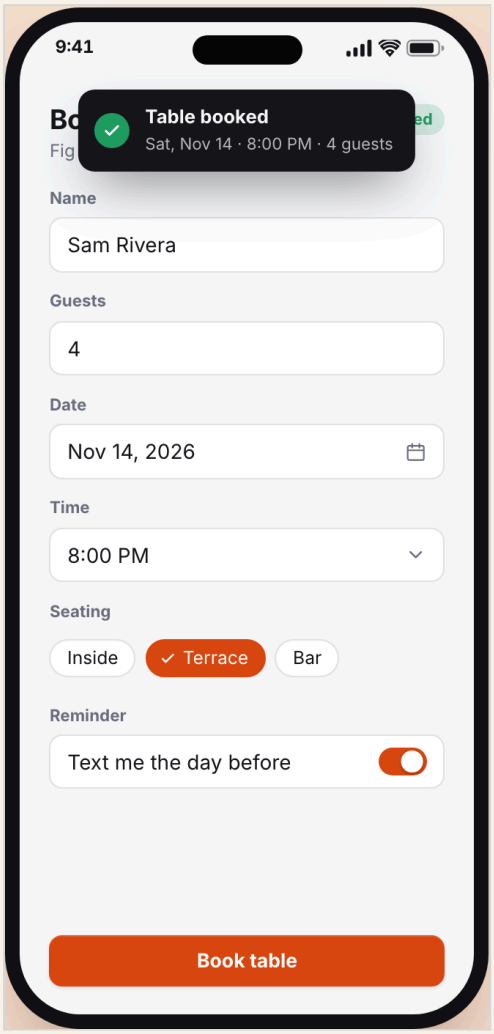

0 8

Frames and pointer.

- **Window**: a title bar with three dots and the **Window Title**.

- **Browser**: three dots and an address bar with a lock and the **Address**.
- **Phone**: a phone with a status bar (9:41), a camera pill and a **Bezel** colour, **Phone Width** wide.
- **None**: only the app screen, with its border, radius and shadow.

Pointer Arrow glides from field to field and clicks with a small ring. Touch shows a fingertip tap on each target, better on a phone frame. None shows no pointer: the fields still fill in.

The booking demo on a phone, with fingertip taps and the message at the top.

09

Properties.

Screen and content

PROPERTY	WHAT IT DOES	DEFAULT	RANGE
Description	What screen readers read instead of the animation. Describe what the demo shows.	the quote	any text
Frame	Window, Browser, Phone or None.	Browser	4 frames
Window Title	The text in the window's title bar.	Spokewise	any text
Address	The text in the browser's address bar.	app.spokewise.example/…	any text
Phone Width	Width of the phone frame.	340 px	240–560 px
Bezel	Colour of the phone around the screen.	near black	any colour
Title, Subtitle	The heading of the app screen and the line under it.	New quote	any text
Status	A small label next to the title. Empty hides it.	Draft	any text
Status After	The label after the button is pressed.	Sent	any text
Fields	Your fields (see Fields).	7 examples	up to 14

Line items and money

PROPERTY	WHAT IT DOES	DEFAULT	RANGE
Line Items	Shows the table, the totals and Add item.	On	On, Off
Items Title	The small heading of the table.	Line items	any text
Items	Name, Quantity and Price of each line.	3 examples	up to 8
Discount	Percent taken off the subtotal. 0 hides it.	10%	0–100%
Tax	Percent added after the discount. 0 hides it.	8%	0–100%

PROPERTY	WHAT IT DOES	DEFAULT	RANGE
Locale	Format of money, numbers, percentages and dates.	en-US	any locale code
Currency	ISO currency code.	USD	USD, EUR, GBP…
Texts	Subtotal, Discount, Tax, Total, the table headings, Add item, Sending and the toggle's On and Off. Empty fields keep the English default.	English	12 texts

Finish and playback

PROPERTY	WHAT IT DOES	DEFAULT	RANGE
Button	The main button, pressed at the end. Empty hides it.	Send quote	any text
Second Button	A quieter button, never pressed. Empty hides it.	Save draft	any text
Message	The success message. Empty hides it.	Quote sent to…	any text
Message Note	A second, smaller line.	They can approve it online.	any text
Message At	Bottom (left) or Top (centre).	Bottom	Top, Bottom
Pointer	Arrow, Touch or None.	Arrow	3 options
At the End	Loop starts again; Stay keeps the finished screen.	Loop	Loop, Stay
Hold	How long the finished screen stays before it starts again.	3.5 s	0.5–60 s
Typing	Letters per second.	24	4–60
Pause	Wait between one field and the next.	0.25 s	0–3 s
Delay	Wait after the demo scrolls into view.	0.4 s	0–10 s
On Hover	Pause while the mouse is over the demo, or keep playing.	Pause	Pause, Play

Look

PROPERTY	WHAT IT DOES	DEFAULT	RANGE
Theme	Light, dark, or the visitor's device setting.	Light	Light, Dark, Auto
Light, Dark	Background, Fields, Text, Muted, Borders and Title Bar colours of each theme.	grey and white; near black	any colours
Accent	Button, focus ring, switches, chips, chosen day.	#4361EE	any colour
On Accent	Text on the accent colour.	white	any colour
Success	The tick of the message and the Status After label.	green	any colour
Radius	Corners of the frame.	14 px	0–48 px
Field Radius	Corners of fields, buttons, menus and cards.	9 px	0–30 px
Shadow	Shadow of the frame.	soft, large	any shadow
Density	Comfortable or Compact.	Comfortable	2 options
Font	Family and base size of everything.	sans-serif, 14 px	any font
Numbers	Same font for numbers, or a font of their own. Digits always have even widths.	Same	Same, Own Font
Number Font	The font of money, quantities and dates, with Numbers: Own Font.	monospace	any font

10

Recipes.

The demo page uses these settings, all with Font Inter 14.

Workshop quote, browser frame

The defaults: seven fields (Customer, Email, Bike, Drop-off, Odometer with suffix km, Turnaround chips, Notify customer toggle), three items, Discount 10%, Tax 8%, en-US and USD, Message at the bottom. On the Phone breakpoint the same instance has Pointer Touch and Density Compact.

Table booking on a phone

Frame Phone, Phone Width 330 · Pointer Touch · Line Items off · Status empty, Status After Confirmed · Button Book table, Second Button empty · Message Table booked, note Sat, Nov 14 · 8:00 PM · 4 guests, Message At Top · Accent #D9480F. Fields: Name, Guests (Number), Date, Time (Dropdown), Seating (Chips), Reminder (Toggle).

Course enrolment after dark

Frame Window, Window Title Northloom · Theme Dark · Locale en-GB, Currency GBP · Discount 15%, Tax 20%, Texts Tax VAT and Discount Early bird · Accent #E8A87C, On Accent #1A1210 · Items Title Your term · Status Step 2 of 2 → Enrolled. Total £281.52.

11

Accessibility and motion.

- The whole demo is one image for assistive technology: **Description** is its text alternative, and everything inside is hidden from screen readers. Write what the demo shows, including the result ("a quote for $232.31 is sent").
- There are no real fields or buttons inside: nothing can take the keyboard focus, and the page's tab order is not affected.
- **Reduce motion**: with reduced motion turned on in the system settings, Ghostfill shows the finished screen and does not move.
- **Without JavaScript** the finished screen, with the total and the message, is already in the page.
- **Framer canvas**: the canvas shows the finished screen, so you can check every field, total and colour without publishing.
- The animation runs only while the demo is in view and the tab is visible; it pauses under the mouse with On Hover Pause.

12

Limits.

- Tested in Chrome (desktop at 1440, 810, 390 and 360 px, phone emulation with touch, reduced motion, JavaScript off). Not yet tested in Safari, in Firefox, on a real iPhone or Android phone, or with VoiceOver and NVDA.
- It is a demo, not a form: visitors cannot type in it, and nothing is sent anywhere.
- Taxes are added on top of the prices (prices without tax); one discount and one tax rate.

- One date per Date field (no ranges, no times; use a Dropdown for times). Dropdowns show all their options at once: keep them under about eight.
- Up to 14 fields and 8 items. Very long values are cut with an ellipsis.
- The colours of the message follow the theme: dark on a light screen, light on a dark one.

13

Licence and support.

- One purchase covers one website. Please keep your component link private.
- Questions and help: info@litchisolutions.com.
- Ghostfill is made and tested by Litchi Solutions, a software and web studio in Italy.
