## Customer Testimonial for Jimmi Hawkins – RavenPixel

---

I engaged Jimmi and RavenPixel to develop a prototype visualization tool of a Graphical User Interface Portal for a major software development project. The delivered visualization tool has been used to scope, troubleshoot, and iterate on the design and customer journey for the delivered software.

The visualization tool that Jimmi created has enabled my software team to quickly work through concepts and ideas, iterating on design and functionality.

Jimmi was very responsive through the requirements capture and scoping phase, ensuring he understood the brief and objective of the tool and delivering on time and to budget providing good communication and progress updates. He was unafraid to ask questions and alter course to ensure the end product met the objectives whilst also providing feedback from his knowledge base of what would work best.

The end result was successful quality output delivered on time, to budget and enabling me and my team to engage in the next phase of our software development.

### Mark Gilmour

Chief Technology Officer – ConnectiviTree (Europe) AG

#### **About Mark Gilmour:**

Mark Gilmour is the Chief Technology Officer at ConnectiviTree (CTree) responsible for the technical business and product strategy and software development and delivery. He has executive responsibility for the corporate ESG policy and development with a particular focus on the E of ESG. Mark has over 28 years of innovation and delivery experience in the telecoms vendor & operator community.
