

[THE CONSUMER — SCIENCE COMPANY]

We build products with biology, harnessing the power of plants. We combine cellular agriculture, synthetic biology and AI to promote wellbeing and contribute to environmental sustainability.

Vision

We build products with biology, harnessing the power of plants. We combine cellular agriculture, synthetic biology and AI to promote wellbeing and contribute to environmental sustainability.

Problem

The demand for food and supplements is increasing, but current practices threaten biodiversity and natural resources. Conventional production is not sustainable, and global health is affected by diet-related diseases. Furthermore, as life expectancy increases, there is a need for alternative wellness products. It is imperative to shift our focus to developing new types of foods and supplements.

Solution

At Terraflors, we develop innovative health, wellness & longevity products using advanced technologies that respect the environment. Our alternative production integrates the entire value chain, from the discovery and design of biological compounds to the creation of health and wellness products, while respecting and enhancing the rich biological diversity of Latin America.

How?

Advanced science, merging:

01 Cellular Agriculture

02 Synthetic Biology

03 Artificial Intelligence guides the selection and combination of ingredients, allowing us to achieve precise dosages and optimal results in each product.

Our Products

Hyperfoods

Functional foods with natural bioactives and AI technology, enhancing well-being beyond basic nutrition

+NUTRI Co

Wellgevity

Supplements promoting longevity, produced using cellular agriculture and scientifically-backed bioactives

vitalis navitas

Bioderm

Skincare that merges cosmetics and pharmaceutical science, created through precision fermentation and dermatological research.
