

Details about Digipack

“faster and smarter scanning”

proprietary & confidential Digilo GmbH

The problem with manual scanning

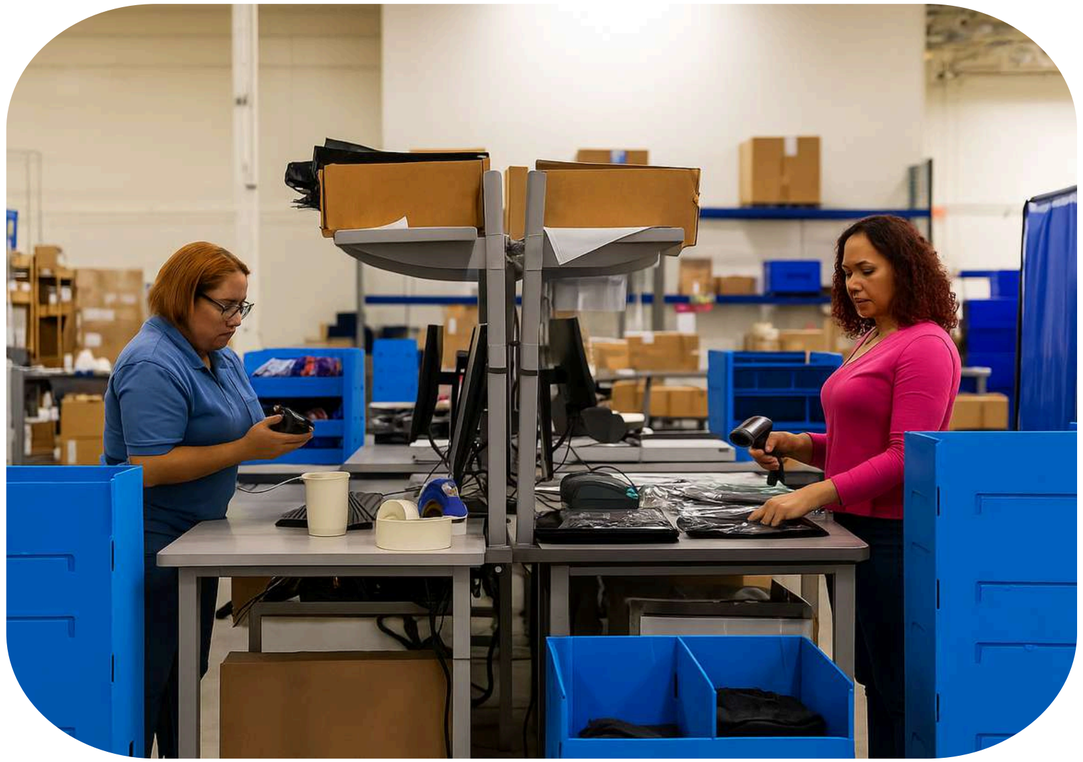

Manual barcode scanning **slows down operations, introduces errors, and puts unnecessary strain on workers.** Every extra second spent scanning adds up, impacting efficiency and accuracy.

Slow and inefficient: Hand scanning disrupts workflow and delays operations

Unergonomic and physically demanding: Repetitive scanning causes fatigue and strain, reducing worker efficiency

Error-prone: Human mistakes lead to inventory discrepancies and costly rework

Incapable of proving claims: No video or photographic evidence is captured

The solution: Digipack

Digilo's hands-free scanning solutions **enhance speed, accuracy, and ergonomics** across your warehouse. Whether it's returns, packing or any other process on a table, we provide a **plug-and-play solution** that seamlessly integrates into your existing workflow.

2x Faster scanning: Scan barcodes instantly without disrupting workflows

Improve ergonomics: Make scanning easier and more comfortable for workers

Reduce errors: Ensure accurate data capture and inventory tracking

Built-in Traceability: Combine with Digitrack for complete video evidence of your returns and packing

How does Digipack work?

One scan camera is installed above the table to enable hands-free scanning. When the operator holds the **SKU in the scan zone**, the relevant information (SKU number, serial number, etc.) is captured by the scan camera.

Scan Camera: A scan camera is installed above the work table

Image decoding: A picture is automatically taken, and all barcodes are decoded and filtered in a fraction of a second

Instant Feedback: The scanned data is sent to the WMS and an immediate confirmation or error message is displayed on the operator's screen

Digipack technology

Our Digipack solution uses **Vision Technology** for **unparalleled speed and accuracy**.

High read rates & throughput: Handles high-speed processing, deep field scanning, and damaged barcodes

Omnidirectional scanning: Reads multiple codes simultaneously from any angle

Future-proof performance: No wearing parts, supports 1D and 2D codes, and provides image feedback

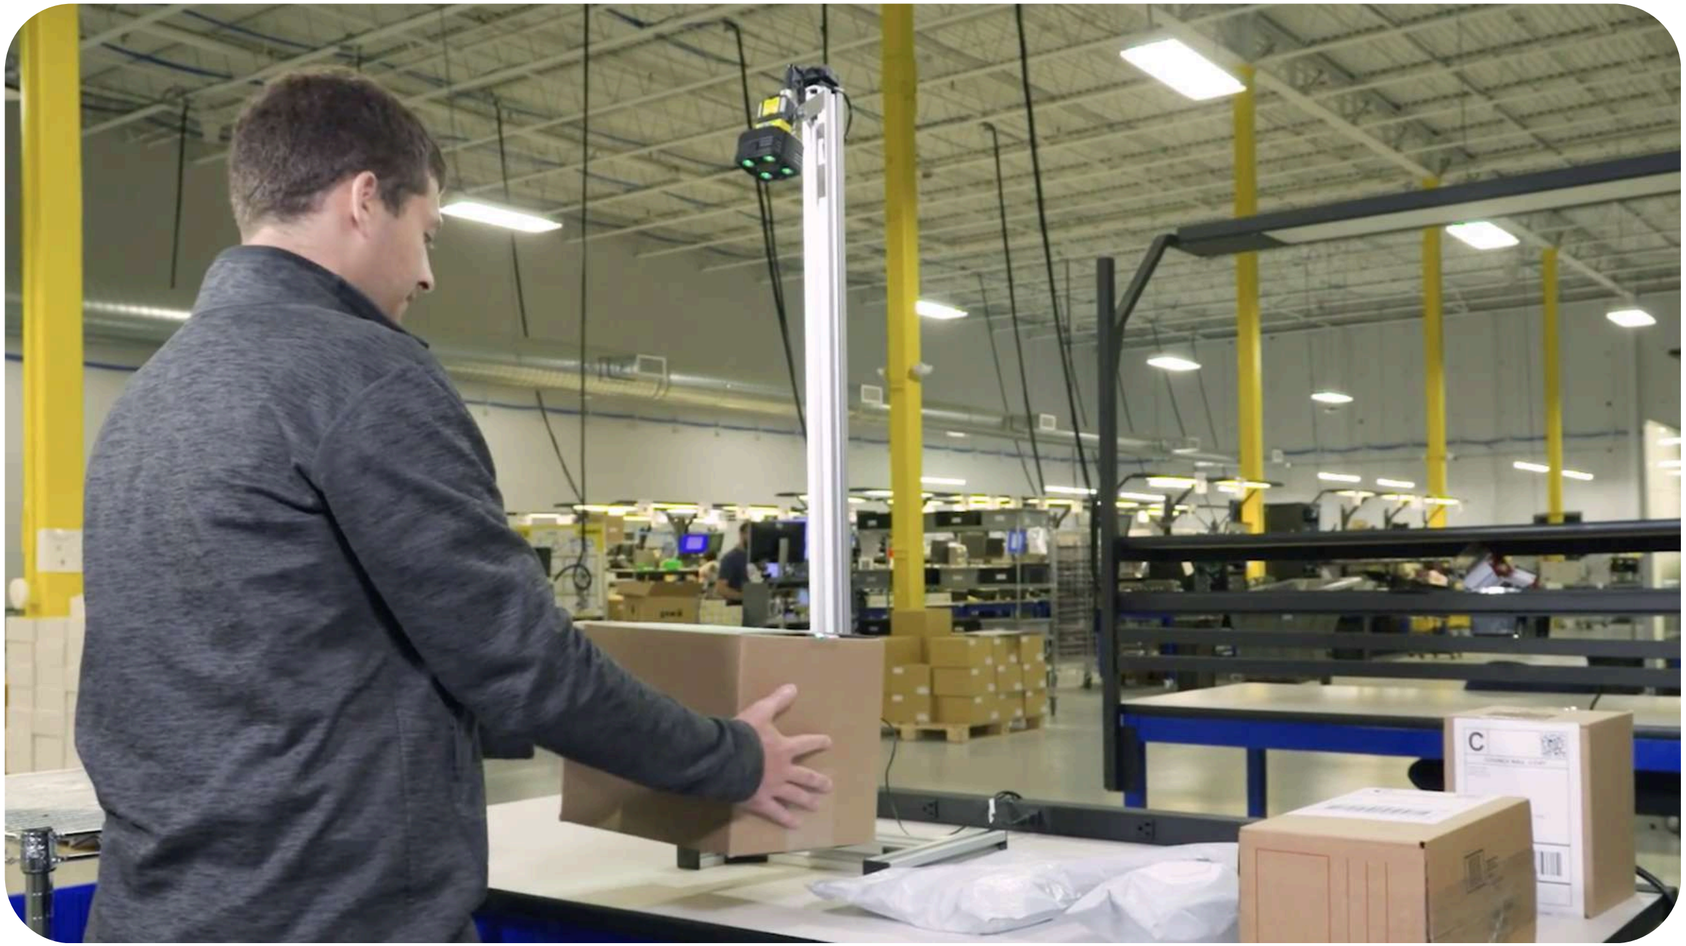

Outperforms laser scanning: No limitations, better accuracy, and higher efficiency

Digipack - real time image decoding

This image illustrates the **Vision Technology** in action, showcasing the system's ability to decode multiple codes simultaneously and provide instant verification.

Digipack in action

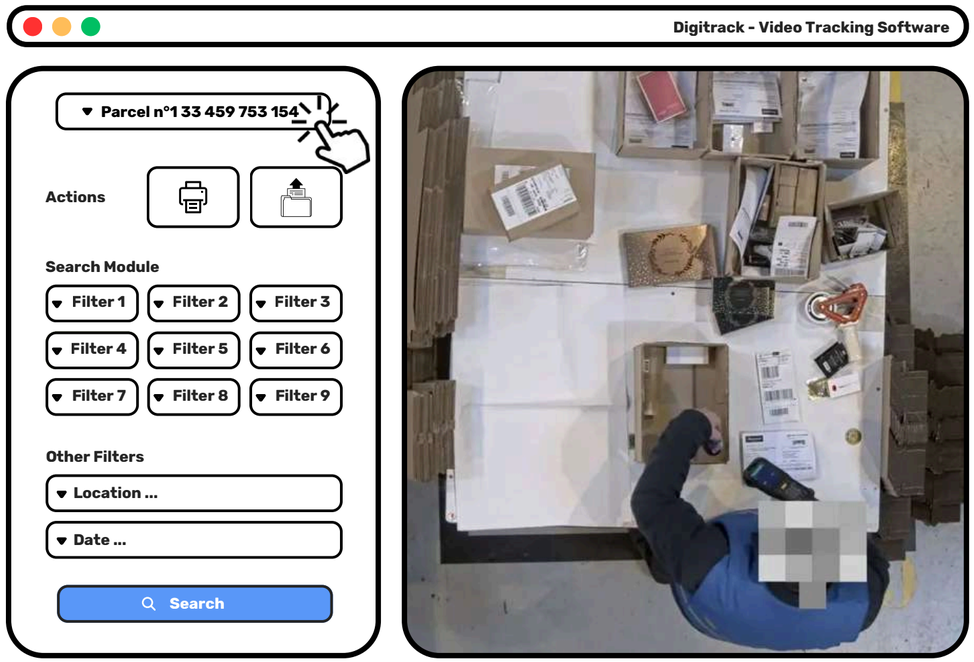

WATCH VIDEOS

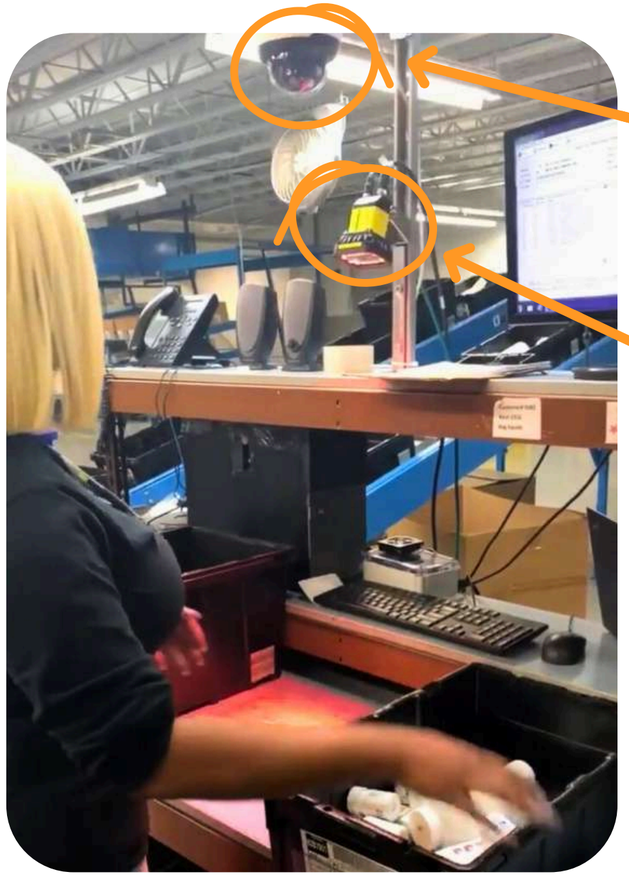

Digipack works best with Digitrack

Every action is **automatically documented & evidence is found in seconds**.
