## About Me

- Lead and deliver designs for large, ambiguous projects, evolving and defining visual systems that transform broad, conceptual ideas into valuable solutions for both users and the business.
- Apply a wide range of research methodologies, balancing rigor with scrappiness to uncover meaningful insights. By amplifying the user's voice, I ensure that product decisions align with business goals, team priorities, and user needs, driving more empathetic and impactful experiences.
- Foster strong partnerships with product managers, engineers, and analysts while giving and soliciting feedback to continually raise quality standards.
- Contribute to strategic product direction and company growth while mentoring underrepresented women entering design or research fields.
