SUMMARY

Product Designer with 3 years of experience in fintech, e-commerce, and web/mobile products. Led a hyper-local social commerce platform across 180+ screens, contributed to an investment execution tool with 170K+ monthly active users, and delivered UX solutions for clients in the UK, gaming, and financial services. Proficient in Figma and AI-assisted design workflows. Skilled in the full design process from discovery to high-fidelity prototyping and developer handoff. Ready to drive Namma Yatri's design solutions to new heights.

EXPERIENCE

*Nuvama Wealth, **Product Designer***

Sep 2025 - Jan 2026

- Contributed to the OrderPad redesign — a high-stakes investment execution tool with 170K+ monthly active users — conducting competitive analysis, UI exploration, and gap identification against market-leading trading apps.
- Designed mobile-specific interaction patterns for complex financial workflows, presenting multiple design directions to senior designers and iterating based on structured critique across review cycles.
- Progressed designs from exploration to a validated prototype, now live in active user testing — demonstrating ownership of the full pre-launch design lifecycle in a professional fintech environment.

*Independent, **Freelance Product Designer***

Aug 2024 - Aug 2025

- Delivered end-to-end UX and UI for clients across consulting, construction, credit, and AR gaming — independently managing discovery, design sprints, iteration, and final handoff for each engagement.
- Led a full website and mobile redesign for Kanj Technologies (UK) — all client feedback incorporated, design approved, and currently in active development.
- Operated as sole designer across all projects: defining scope, creating wireframes and high-fidelity prototypes, and ensuring solutions met both user needs and business goals.

*Qubited, **UI/UX Designer***

Oct 2022 - Jun 2024

- Led 0-to-1 design of a hyper-local e-commerce platform spanning 150+ screens — seller storefronts, live stream selling, auction flows, and buyer-seller chat across desktop and mobile; all screens shipped to production.
- Owned the complete design process: competitive analysis, information architecture, wireframing, prototyping, and interaction design, while collaborating closely with developers on handoff.
- Mentored a fellow designer on visual consistency and execution standards, fostering quality and design thinking across the team.
