

Lumara

Shadow

Identity Exposure Protection

Know Your Exposure. Protect Your Credentials

Your team's credentials may already be exposed to cybercriminals without you knowing it.

Lumara Shadow continuously monitors the dark web and criminal forums for compromised usernames and passwords tied to your domain, giving you early visibility into credential leaks to stop account takeover attacks before they reach your network.

Why It Matters

■ Exposed Credentials Go Undetected

Compromised usernames and passwords can be traded on the dark web long before an incident is detected.

■ Visibility before attackers move

Early warning gives your team time to force password resets, secure affected accounts, and reduce attacker opportunity.

■ A Direct Path Into Your Environment

A single compromised account can be used to launch ransomware, steal sensitive data, and compromise the entire organisation.

■ Ongoing exposure risk

Third-party breaches happen every day, making continuous monitoring critical to maintaining your security posture.

What It Does

Lumara Shadow continuously monitors thousands of dark web sources, including criminal marketplaces, forums, and paste sites, for compromised credentials associated with your organisation. When exposure is found, you receive immediate alerts so you can force password resets and secure affected accounts before they are exploited.

How Lumara Shadow Protects You

Lumara Shadow provides the tools and intelligence you need to get ahead of credential-based attacks, all managed and monitored by our Australian SOC.

-  **Dark Web Monitoring**
We continuously monitor closed criminal forums, marketplaces, and dark web sources for the broadest credential exposure coverage.
-  **Credential Exposure Alerts**
Get immediate alerts when credentials are compromised, so you can act decisively before attackers exploit the exposure.
-  **Identity Risk Scoring**
Our alerts give you the full context to understand the risk, including breach source, exposure date, and affected credentials.
-  **Automated Takedown Requests**
Gain instant visibility into historical exposure from thousands of third-party breaches, for a complete picture of your identity risk.
-  **Executive & VIP Protection**
Our SOC analysts manage the platform, eliminate false positives, and guide remediation and response.
-  **Continuous Threat Intelligence**
Receive regular reports on your identity exposure trends and the ongoing value of your dark web defence program.

Protecting Australians since 2006

Australia is Secure when Australian talent defends it.

Lumara is built by Secure ISS, a sovereign Australian cybersecurity and technology services provider trusted across government, education, healthcare, and industry. With deep understanding of Australia's regulatory environment and threat landscape, we deliver intelligence-led security designed for local conditions.

Sovereign 24 / 7 SOC run
in Australia, by Australians

Developing Australian cyber
talent with local partners

AI-driven security grounded
in Australian values
