

Asymmetric Smart Film

When ordering Adhesive Smart Film for a non-rectangular or asymmetrical glass panel, it is critical to provide the drawing from the correct perspective to ensure proper production and installation.

Since adhesive smart film can only be installed from one side, the orientation must be clear and accurate.

-
- The drawing should be provided from the installer's point of view, standing in front of the glass, facing the side where the film will be applied
 - Important Note: A reversed or misaligned shape may result in a film that does not fit the intended layout.
