

WHAT SHOULD I EXPECT AFTER TREATMENT?:

- Immediately after treatment, there may be “frosting” on the treated area.
- Redness, swelling, and itching are typical post-treatment. Pinpoint bleeding may also occur.
- The treated area should be cared for delicately until healing is complete and care should be taken to avoid trauma to the area for the first 7 days after treatment.

WHAT SHOULD I DO FOR HOMECARE AFTER MY TREATMENT?:

- Apply aquaphor ointment to the treatment area 2-3 times a day. Keep the area moist.
- Do not pick, peel, rub, scrub or scratch at the skin in the treatment area throughout the healing process.
- If crusting occurs, do not shave or pick the area.
- Although blisters and scabs can be a normal response to tattoo removal, most patients will not experience them.
 - If blisters and scabbing occur, it is important not to pop or pick at the site.
 - If the blister pops on its own, keep the skin over it covered with a healing ointment and gauze to promote healing and prevent scarring.
- No swimming or using hot tubs/whirlpools until the wound heals.
- **Apply a mineral-based sunscreen daily post-treatment.**
