

SEGURITECH INTERNATIONAL LLC

PRODUCTS AND SERVICES PORTFOLIO

Who we are

With decades of experience, we are a service focused company, bringing together an elite group of professionals, dedicated to the design, planning, implementation and operation of comprehensive, scalable and nimble solutions. We guarantee the continuity of services you require, even in the most challenging environments.

Mission

Seguritech International creates comprehensive solutions to provide peace of mind.

Vision

Expand and consolidate our leadership in the creation of comprehensive technological solutions, with the goal of exceeding our client's expectations, by remaining nimble and innovative.

Divisions

Security

Safeguarding personal, family and corporate assets through the developed of innovative tools to address a variety of risks and criminal activity.

Telecommunications

Cutting-edge technology guaranteeing the most effective and trustworthy service in the market.

Aerospace Technology

Our team of seasoned professionals, with decades of international and domestic experience, ensures the highest level of readiness to address your mission.

Facility Maintenance

We provide routine and specialized maintenance to HVAC, electrical and plumbing systems, as well as others, allowing you to concentrate on your core mission.

What we do

We provide the most reliable solutions, through a tailored design, to comprehensively manage our clients' risk environment.

URBAN VIDEO SURVEILLANCE SYSTEMS

URBAN VIDEO SURVEILLANCE SYSTEMS

- No visual pollution of the environment where they are placed (1 PZT/3 static cameras)
- Improves response times for first responders (police, EMS and fire departments)
- Contributes to reduced rates of criminal activity in public areas, improves traffic control and emergency management tasks, while helping preserve public facilities
- First hand, reliable information for prompt decision making in addressing emergencies

DRONE SURVEILLANCE SYSTEMS

Drone docking stations placed on camera poles, complementing the system's comprehensive capability regarding incident follow up, by providing real time image access to command center operators

Characteristics:

- Remote control
- In motion, real time image access
- Long battery range
- Immediate awareness of incidents
- Reduction of response times

DRONE
SURVEILLANCE
SYSTEMS

VIDEO ANALYTICS

Incident identification, based on smart parameters, to improve identification of and response to incidents

Capable of reliable forensic analysis of incidents

TRADE AND TRAVEL FACILITATION

We remain proudly proactive in the use of cutting edge technology to facilitate legitimate trade and travel across international borders, while applying the highest security standards. Our deployment

of the most effective targeting and inspection technology is designed to achieve the highest possible efficiency in operations.

INTERNATIONAL LAND BORDERS

VIDEO MANAGEMENT SYSTEMS “VMS”

An open platform system, capable of managing and monitoring an unlimited number of IP and analog cameras and/or devices, aside from integrating analytical video systems, creating a centralized control interface.

The VMS is also capable of managing video flows to analyze images and recordings to automate functions such as those related to alarms, maps and video analysis to optimize results.

Features

- Increased flexibility
- Hardware scalability
- Video analysis
- Allows integration with other platforms

VIDEO MANAGEMENT SYSTEMS “VMS”

TECHNOLOGY AND INFORMATION INTEGRATING SYSTEM

These systems provide the specialized mechanisms to guarantee the protection and integrity of all technological platforms and systems, so that information produced and stored is processed securely. Our platforms and system integration are based on a design that promotes the automation, control and supervision of all systems, software and hardware in real time, through the continuous interaction with a system that provides constant reports and alarms, with the following basic parameters:

- Oversight and monitoring with the continuous application of preventive measures
- Strengthening of cyber security measures at the control center
- Comprehensive operation and administration of all platforms and systems, in such a way that each independent system within the network supports others, in order to increase the network's and facility's security posture.

TECHNOLOGY AND
INFORMATION
INTEGRATING SYSTEM

INFORMATION AND OPERATIONAL CONTINUITY

Network Operations Center (NOC) & Security Operations Center (SOC)

Our systems are designed to continuously protect all virtual and physical information handled by public and private organizations, from all risks and threats they might face, guaranteeing their integrity and relevance. While the Network Operations Center (NOC) remains responsible for

monitoring the operational integrity of all services and infrastructure, the Security Operations Center (SOC) guarantees the integrity of all information handled and produced by your organization. Both the NOC and SOC are supported by state of the art technology and infrastructure.

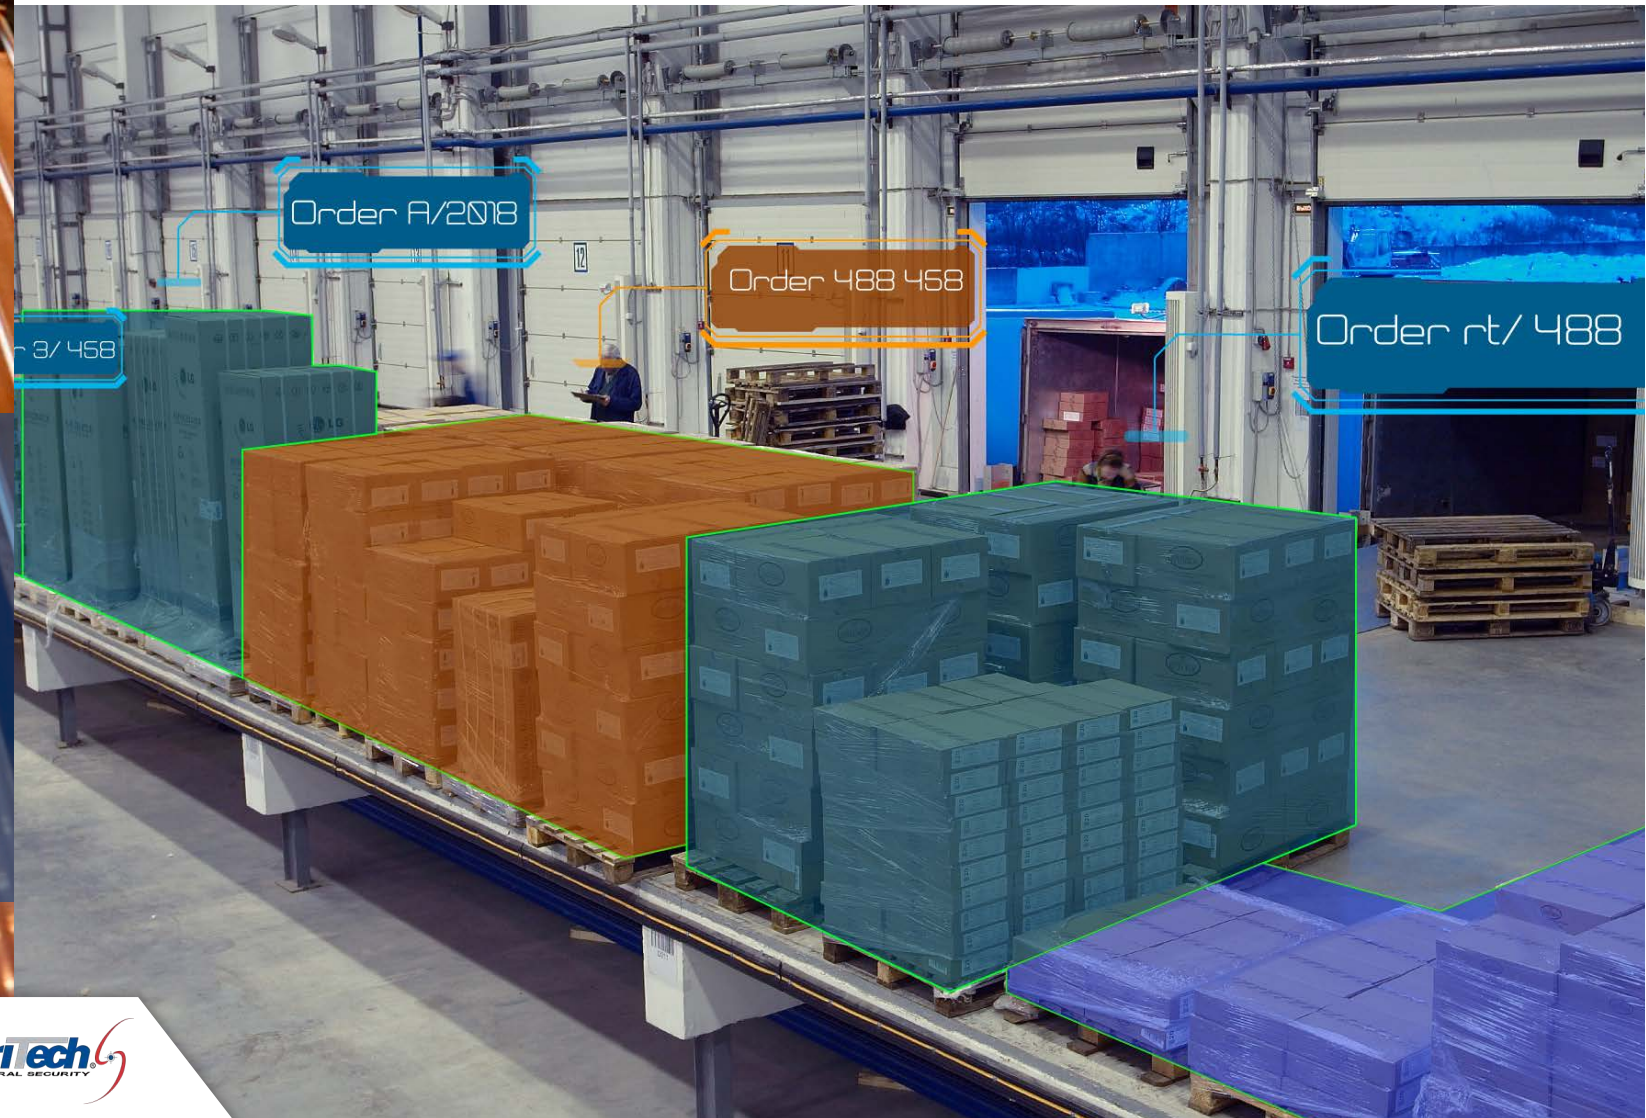

INFORMATION AND OPERATIONAL CONTINUITY

INFRASTRUCTURE MANAGEMENT

Our comprehensive solutions are designed to remain nimble, offering you the desired balance between security and efficient management of access and enjoyment of infrastructure. From facilities that require the highest security and limited access, such as prisons, to public venues that demand ease of access to ensuring the enjoyment of sporting, art and cultural events, such as stadiums, our relentless exploitation of cutting edge technology guarantees the desired

environment through integration of the following systems, as well as others:

- Closed tv circuit systems
- Pedestrian access control systems
- Vehicle access control systems
- Biometric systems
- Perimeter control systems
- Smoke detection and fire suppression systems
- Inventory management systems

AVIATION

Because we know the value of information and time to accomplish the most critical missions, we bring to bear our many years of experience providing manned and unmanned air platforms for a variety of needs. From transporting injured or ill individuals who require critical healthcare, to executive transportation that expedites arrival

in comfort during time sensitive circumstances, our manned air platforms are designed to meet multiple industry expectations. Likewise, our unmanned air platforms provide surveillance and monitoring capabilities suitable for security and scientific investigations, as well as a variety of agricultural, livestock raising, and hydronic monitoring enterprises.

MAINTENANCE AND OPERATIONAL CONTINUITY POLICY

We guarantee the continuous operation of command centers, given the permanent technological upgrades we provide to the brick and mortar facilities, as well as to the software and equipment deployed. As part of our internal

customer service policy, we maintain the highest quality standards regarding the performance of the software and hardware we deploy, as well as in regards to the certifications our staff maintain to provide the best possible service.

PERSONNEL AND MERCHANDISE SECURITY IN MEXICO

Our in-depth understanding of Mexico's socioeconomic environment and operational realities allows us to offer a comprehensive consulting service whereby experts assess the environment in which staff performs its duties and merchandise is housed or transported within Mexico. This allows us to identify all risks and suggest processes and technology

to mitigate them, via the deployment of communication systems, personal GPS devices, a smartphone application with GPS and panic button capabilities, armored vehicles and recommendations regarding roads to transit, lodging locations and health facilities to service staff.
