AI ALIGNMENT – ORIGINAL RESEARCH

AI alignment is being framed as a technical problem. It is not. The failure is epistemological. You cannot align a system to human values when the humans defining the target cannot see their own contradictions.

THE OFFERING

Limina Institute is developing original research examining AI alignment failure as a diagnostic instrument for human epistemology. The argument spans multiple domains. The subject is not the technology. It is what the technology reveals about how the human mind constructs meaning, what is destroyed in translation, and what was surrendered without knowing it had value.

THE OUTPUT

A working paper forthcoming at stellatalverdi.com. A structural diagnosis of why the current approach cannot produce what it claims to seek — and what the failure, when examined precisely, reveals about the human condition.

INTENDED FOR

Researchers, policy makers, and organizations working in AI safety, governance, and compliance — particularly those willing to examine the epistemic integrity of the alignment framework. The system is not the sum of its parts. It is the product of their interaction.

TO ENGAGE: *For research inquiries and collaboration.*
