

LOGICOLE CUSTOMER ORDERING & INVENTORY MANAGEMENT MVC1

LogiCole's Customer Ordering and Inventory Management Minimum Viable Capability, also known as MVC1, is the first step of the DMLSS technical refresh. It modernizes customer-level workflows with a cloud-based, browser-accessible platform—offering a more intuitive user experience and standardized processes across military treatment facilities (MTFs).

KEY FEATURES:

Smart Alerts

Repeated order failures are flagged & user is notified to check availability or contact logistics

Receipt Confirmation

Automatic updates when products arrive, ensuring transaction history is current.

Dead Stock Reports

Identifies unused inventory that hasn't moved, enabling better space and supply management.

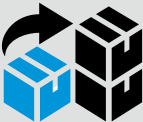

Modern Interface

Refreshed, user-friendly UI with a familiar commercial-style layout for easier navigation.

REAL-TIME VISIBILITY IN A DASHBOARD VIEW

7 ESSENTIAL REPORTS

- **ACTIVE DUE-IN**
Tracks incoming items expected to arrive soon
- **INVENTORY STATUS**
Provides current stock levels across key items
- **RECEIPT NOTIFICATIONS**
Confirms item delivery and updated status

- **TRANSACTION HISTORY**
Complete record of ordered and received items
- **CONSUMPTION HISTORY**
Displays usage trends to help plan future orders
- **REPETITIVE CANCELLATIONS**
Alerts when items have been ordered and cancelled multiple times
- **DEAD STOCK**
Identifies unused stock that may need to be removed or relocated
