Max Tread™

Gater Grip™

Whole Grip™

Safety Grating

Safety starts where you step™

Feature	Safety Grating	Bar Grating
Slip Resistance	✓ Superior Traction, Serrated Design	✗ Limited Slip Protection
Weight	✓ Up to 73% Lighter per foot ²	✗ Heavy & Hard to Handle
Cost	✓ Up to 68% Cheaper per foot ²	✗ Higher Total Cost
Installation	✓ Easy to Cut, Bolt, or Clamp	✗ Requires Welding & More Support

Factory-Direct Savings

Grating is sold directly from our factory, eliminating middlemen and ensuring you get the best value at competitive prices.

Made in the USA

All of our grating is stamped and manufactured in Dallas, Texas, using American labor and high-quality U.S. steel, aluminum, and stainless steel.

Precision Stamped for Strength

Manufactured using high-tonnage stamping presses, our grating is engineered for consistency, superior strength, and long-lasting performance.

Fast Lead Times

Because we manufacture in-house and maintain inventory of many standard products, we offer shorter lead times and quick order fulfillment, outperforming overseas suppliers.

Manufacturing Since 2017

IGP has been designing and manufacturing grating solutions since 2017, serving industrial and commercial markets with high-quality, precision-engineered products.

ISO 9001:2015 Certified Quality

We are proud to be ISO 9001:2015 certified, ensuring that every piece of grating meets the highest quality standards for performance, safety, and reliability.

Commitment to Safety

Every product we manufacture is quality-tested and built to meet or exceed industry standards for durability and safety.

Custom Solutions Available

Need a specialized solution? We offer custom grating designs, materials, and finishes to meet your exact needs.

How Load Data Was Generated

The following tables were created using actual load testing. To ensure the reliability of the listed load capacities, two critical performance aspects of the safety grating were evaluated:

Strut Flexure

- Strut flexure refers to the transverse bending of the grating surface under uniform or concentrated loads. This bending occurs when the grating's surface deflects relative to the side channels.
- Load tests were performed on samples of varying grating materials, widths, and thicknesses to determine allowable strut loads.
- The resulting data informed the preparation of the **strut loading tables**, which show acceptable loads and corresponding deflections based solely on strut flexure.

Channel Flexure

- Channel flexure occurs when the grating's side channels deflect at mid-span relative to their support points.
- To test this, samples were loaded at different spans with both uniform and concentrated loads. The tests simulated the most severe conditions, with no attachments between channels and supports.
- Shorter spans, deeper channels, and wider planks were found to make strut flexure more significant than channel flexure.

Load Data and Material Strength

Yield strength used in calculations:

- Steel: 30,000 psi
- Aluminum: 22,000 psi
- Stainless Steel: 33,000 psi

Allowable Uniform Load (U): The smallest of the following:

- The maximum uniform load limited by channel flexure.
- The maximum surface flexure capacity.

Deflection for Uniform Load (U):

- Listed below uniform load values, showing mid-span side channel deflection under allowable loads.

Allowable Concentrated Load (C): The smallest of the following:

- The maximum concentrated load limited by channel flexure, assuming both side channels are effective.
- The maximum allowable strut load for a 1-foot-long section.

Deflection for Concentrated Load (C):

- Listed below concentrated load values, showing mid-span side channel deflection when the load is applied.

Engineered for superior traction and durability, Max Tread™ features a high-performance surface with hundreds of raised perforated buttons, delivering multi-directional slip resistance in even the most demanding environments. Designed for industrial and commercial applications, this grating provides a secure walking surface while meeting stringent safety standards.

Reliable Slip Resistance

- Traction-enhancing perforated buttons ensure grip in all directions, reducing the risk of slips and falls.
- Designed for areas with frequent pedestrian traffic, making it a practical and durable solution for high-use environments.
- ADA-compliant, meeting accessibility standards for safe and stable walking surfaces.
- Perfect for walkways, ramps, stair treads, platforms, and reconditioning worn surfaces that lack slip resistance.
- Easily integrated into custom fabrication projects, making it ideal for specialty industrial applications.
- Available in various hole patterns to accommodate specific project needs.
- Can be cut to order and fabricated for unique configurations upon request.

Built for Durability & Longevity

- Manufactured with high-strength materials to withstand heavy foot traffic and industrial use.
- Resilient construction offers exceptional wear resistance for long-term reliability.
- Designed for low-maintenance performance, providing a cost-effective solution for safe and durable flooring.

Custom Fabrication & Configurations

- Special cutting, shaping, and fabrication services are available to match custom specifications.
- Designed for easy installation in both new builds and retrofit applications.
- Available in a range of materials, sizes, and finishes to suit your project's requirements.

Max Tread™

Safety starts where you step™

Max Tread™ safety grating provides superior traction and durability for demanding industrial and commercial applications. Use this page to configure the best solution for your project.

1 PRODUCT SELECTION

WIDTH	DIMPLE PATTERN	TYPICAL APPLICATIONS
7" 	 10 DIMPLE	Walkways, Catwalks, Platforms
10" 	 15 DIMPLE	Walkways, Platforms
12" 	 18 DIMPLE	Heavy Traffic Areas

* Other widths and dimple patterns may be available upon request.

2 MATERIAL SELECTION

MATERIAL	AVAILABLE GAUGES
HRPO STEEL	13 ga (.090") 11 ga (.120")
GALVANIZED ASTM A653 G90	13 ga (.090") 11 ga (.120")
ALUMINUM 5052-H32	8 ga (.125") 10 ga (.100")
STAINLESS 304	16 ga (.060")

Safe allowable loads and deflections: C = Concentrated Load (lbs) D = Deflection (inches)

Loads to the left of the black line (green) adhere to OSHA Ladder Rung Requirements [29 CFR 1910.23](#) (general industry) and [29 CFR 1926.1053](#) (construction) where each rung must support 250 lbs. of concentrated load at midspan without failure or permanent deformation. A minimum safety factor of 2.0 is used in these safe load calculations.

Cost-Effective and Low Maintenance

- Manufactured from durable, corrosion-resistant materials for long-term reliability.
- Standard mill-galvanized coating resists rust and extends the lifespan of the grating.
- Available in high-strength aluminum, Type 316-2B stainless steel, and Type 304-2B stainless steel for maximum corrosion protection.
- Unpainted HRP&O steel is an option for installations requiring a customized finish.
- Lightweight yet strong panels help reduce the need for additional structural support, minimizing overall project costs.

Versatile, Durable, and Safe

- Offered in a variety of standard widths and channel heights to meet diverse application needs.
- Custom sizes and configurations available to address specific strength, durability, weight, and appearance requirements.
- Seamless one-piece construction eliminates welds and rivets, reducing failure points.
- Special forming options can be customized for unique project specifications.
- All surfaces are accessible for easy brush or spray finishing, simplifying the application of protective coatings.
- Can be used as-is or customized with banding, welding, notching, or cutting to fit specific installations.

Reliable Non-Slip Surface

- Provides superior traction in all directions, ideal for indoor and outdoor areas prone to mud, ice, snow, oil, and cleaning agents that could create hazardous conditions.
- 40% open surface area (depending on product size) helps prevent tools and small objects from falling through.
- Self-cleaning design quickly drains fluids, grease, mud, and debris.
- Allows for airflow, ventilation, and light passage, enhancing workplace safety.
- Ice accumulation easily breaks away under normal foot pressure.
- Open structure permits fast and easy cleaning with a brush, liquid wash, or air spray.

Designed for Strength and Longevity

- Built to handle heavy loads with an optimized strength-to-weight ratio for extended durability.
- Engineered with formed struts and integrated side channels, ensuring minimal deflection in both transverse and longitudinal directions.
- No rivets or pressure joints that could loosen or fail over time.
- Constructed for high load-bearing capacity with minimal flex.
- Tough, rugged structure offers long-lasting performance even in demanding environments.

Effortless Installation

- Lightweight planks are easy to handle, making installation quick and simple.
- Can be lifted and positioned by a single person.
- Most sections can be bolted, clamped, or welded into place with minimal effort.
- Easily cut in the field at nearly any angle or fabricated to fit unique conditions.
- Special attachment systems allow for quick fastening to existing structures, ensuring fast setup and removal when needed.

18" WIDTH – 10 HOLE

Material Selection		
Type	Description	Gauge
STEEL	Hot Rolled Pickled & Oiled	13 ga (.090")
		11 ga (.120")
GALV	ASTM 653 Galvanized G90	13 ga (.090")
		11 ga (.120")
ALUMINUM	5052-H32	8 ga (.125")
STAINLESS	304 Stainless Steel	16 ga (.060")

Safe allowable loads and deflections: U = Uniform Load (lbs/ft²) C = Concentrated Load (lbs) D = Deflection (inches)

Loads to the left of the black line (green) produce a deflection of 0.250" or less under a uniform load of 100 lbs/ft² for the safety and comfort of pedestrian traffic.

Cost-Effective Installation

- Gater Grip safety grating is designed for affordability, not only due to its low material and assembly costs but also because of its durable, corrosion-resistant composition, which extends its lifespan.
- Standard mill-galvanized coating enhances corrosion resistance, ensuring longevity.
- Aluminum and stainless steel options (304 and 316L) offer superior protection against rust and environmental wear.
- Black steel is available for projects requiring hot-dip galvanization after fabrication.
- Lightweight yet exceptionally strong panels allow for reduced structural steel requirements.

Flexible Sizing & Customization

- Offered in a range of standard widths and channel heights, with additional customization options available.
- Numerous non-standard configurations and sizes can be produced.
- A seamless, one-piece construction eliminates welds or rivets that could weaken over time, reducing the need for in-house modifications.
- Custom forming and shaping can be tailored for unique project specifications.

Enhanced Safety with Serrated Surface

- Provides multi-directional traction for secure footing.
- Non-slip surface remains effective in both indoor and outdoor environments, even in the presence of mud, snow, ice, oil, or cleaning agents.
- Small opening design helps prevent tools and other objects from falling through, reducing workplace hazards.

Efficient Drainage & Easy Maintenance

- Open structure quickly drains liquids, debris, grease, and dirt.
- Ice accumulation is easily broken under normal foot pressure.
- The design allows easy access for cleaning with brushes, liquid solutions, or air spray, reducing maintenance efforts.

Strong Load Capacity & Long-Term Reliability

- Exceptional strength-to-weight ratio achieved through its structural design.
- Integrated side channels and grating form a plank capable of bearing heavy loads with minimal flex.
- Free of rivets or pressure joints that could weaken over time.
- Engineered for high load performance with durability that ensures extended service life.

Quick & Simple Installation

- Lightweight planks simplify handling and installation.
- Easily managed by a single worker.
- Most sections can be swiftly bolted, clamped, or welded in place, with the ability to be cut at various angles to accommodate field adjustments.
- Multiple attachment options allow for secure fastening to existing surfaces, enabling fast setup and easy disassembly when needed.

Gater Grip™

Walkways

Planks

Stair Treads

**Customized
Grating**

Gater Grip™ diamond-plank grating combines aggressive traction with durable, corrosion-resistant construction. Use this page to configure the best solution for your project.

1 PRODUCT SELECTION

4-3/4" Width 2 Diamond

7" Width 3 Diamond

9-1/2" Width 4 Diamond

11-3/4" Width 5 Diamond

18-3/4" Width 8 Diamond

24" Width 10 Diamond

2 MATERIAL SELECTION

MATERIAL	AVAILABLE GAUGES
HRPO STEEL	14 ga (.075") 12 ga (.105")
GALVANIZED ASTM A653 G90	14 ga (.075") 12 ga (.105")
ALUMINUM 5052-H32	12 ga (.080") 10 ga (.100")
STAINLESS 304	16 ga (.060")

3 CHANNEL HEIGHT

* 1 1/2" and 2" standard on 2-8 Diamond.
10 Diamond available in 2" and 3".

6 FINISHES

- Mill Galvanized
- Mill Finish Aluminum
- Powder Coat

7 ORDERING EXAMPLE

DGP052014 - 12

- Length - 10 = 121.5" (10'), 12 = 144" (12')
- Gauge - 12ga, 14ga, 16ga, .080", .100"
- Height - 1.5", 2", 3"
- Number of Diamond wide
- P = G90 B = HRPO A = Aluminum S = Stainless
- Diamond

EXAMPLE:

DGS071512-10

Diamond, Stainless, 7" wide (3 diamond), 1.5" channel, 12-gauge, 120" length.

These load tables are based on physical test results and are provided for reference only. Safe use and installation of grating products involve factors beyond testing conditions. Users should consult a licensed engineer and exercise independent judgment. This technical information is for evaluation by skilled professionals, and any use is at their own discretion and risk. IGP assumes no responsibility or liability for outcomes or damages resulting from improper assessment or use of grating products.

7.00" WIDTH – 3 DIAMOND

Material Selection		
Type	Description	Gauge
STEEL	Hot Rolled Pickled & Oiled	14 ga (.075")
		12 ga (.105")
GALV	ASTM 653 Galvanized G90	14 ga (.075")
		12 ga (.105")
ALUMINUM	5052-H32	12 ga (.080")
		10 ga (.100")
STAINLESS	304 Stainless Steel	16 ga (.060")

Safe allowable loads and deflections: U = Uniform Load (lbs/ft²) C = Concentrated Load (lbs) D = Deflection (inches)

Loads to the left of the black line (green) produce a deflection of 0.250" or less under a uniform load of 100 lbs/ft² for the safety and comfort of pedestrian traffic.

These load tables are based on physical test results and are provided for reference only. Safe use and installation of grating products involve factors beyond testing conditions. Users should consult a licensed engineer and exercise independent judgment. This technical information is for evaluation by skilled professionals, and any use is at their own discretion and risk. IGP assumes no responsibility or liability for outcomes or damages resulting from improper assessment or use of grating products.

11-3/4" WIDTH – 5 DIAMOND

Material Selection		
Type	Description	Gauge
STEEL	Hot Rolled Pickled & Oiled	14 ga (.075")
		12 ga (.105")
GALV	ASTM 653 Galvanized G90	14 ga (.075")
		12 ga (.105")
ALUMINUM	5052-H32	12 ga (.080")
		10 ga (.100")
STAINLESS	304 Stainless Steel	16 ga (.060")

Safe allowable loads and deflections: U = Uniform Load (lbs/ft²) C = Concentrated Load (lbs) D = Deflection (inches)

Loads to the left of the black line (green) produce a deflection of 0.250" or less under a uniform load of 100 lbs/ft² for the safety and comfort of pedestrian traffic.

18-3/4" WIDTH – 8 DIAMOND

Material Selection		
Type	Description	Gauge
STEEL	Hot Rolled Pickled & Oiled	14 ga (.075")
		12 ga (.105")
GALV	ASTM 653 Galvanized G90	14 ga (.075")
		12 ga (.105")
ALUMINUM	5052-H32	12 ga (.080")
		10 ga (.100")
STAINLESS	304 Stainless Steel	16 ga (.060")

Safe allowable loads and deflections: U = Uniform Load (lbs/ft²) C = Concentrated Load (lbs) D = Deflection (inches)

Loads to the left of the black line (green) produce a deflection of 0.250" or less under a uniform load of 100 lbs/ft² for the safety and comfort of pedestrian traffic.

These load tables are based on physical test results and are provided for reference only. Safe use and installation of grating products involve factors beyond testing conditions. Users should consult a licensed engineer and exercise independent judgment. This technical information is for evaluation by skilled professionals, and any use is at their own discretion and risk. IGP assumes no responsibility or liability for outcomes or damages resulting from improper assessment or use of grating products.

Assembly and Mounting Hardware

Carriage Bolts

Bolt Lock Washers

Diamond Washers

Grab Handle Washers

Flat Washer

P/N **IGP-0004A**
Carriage Bolt Seat, 1/2"

13ga Galv • galvanized,
Stainless, & Aluminum

P/N **IGP-0004B**
Carriage Bolt Seat, 3/8"

13ga Galv • galvanized,
Stainless, & Aluminum

The **Carriage Bolt Seat** is a precision-stamped hardware component designed for securing our **WHOLE GRIP™** grating using carriage bolts. It fits securely into the grating's extruded hole and features a rectangular bolt opening that allows for slight lateral adjustment during installation. This flexibility helps align with holes in C-Channels or other structural supports, ensuring a snug, reliable fit. 13-gauge material options include galvanized steel, stainless steel, and aluminum. Match the Bolt Seat material to the grating to minimize oxidation between dissimilar metals and support long-term durability. When properly assembled, the carriage bolt head sits flush with or below the grating surface, minimizing the risk of trip hazards and preventing interference with pedestrian traffic.

P/N **IGP-0003**
Bolt-Lock Washer

Our **Bolt-Lock Washer** is a heavy-duty 8-gauge galvanized reinforcement washer designed specifically for grating applications in the rail industry. Commonly paired with swaged fastener systems like the Huk Bolt (not affiliated), it serves two critical functions: it reinforces the grating's sidewall at the mounting point, and it acts as a standoff to accommodate the cylindrical neck of the bolt between the head and the threaded section. The thick profile ensures a secure, vibration-resistant hold and prevents deformation or pull-through under load.

P/N **IGP-0007**

Diamond Washer,
5/16" Carriage Bolt

11ga Galv • galvanized

P/N **IGP-0007A**

Diamond Washer,
3/8" Bolt

11ga Galv • galvanized

The **Diamond Washer** is a precision-stamped hardware component designed for securing our **Gater Grip™** grating. IGP-0007 has a 5/16-inch square opening for a carriage bolt, while IGP-0007A has a round opening for a 3/8-inch standard bolt. Both fit the grating's downward-extruded diamond hole. Each Diamond Washer is manufactured from galvanized 11-gauge steel for enhanced corrosion resistance and long-term durability. When properly assembled, the carriage bolt head sits flush with or below the grating surface, minimizing trip hazards and preventing interference with pedestrian traffic.

P/N **IGP-0006**
Grab Handle Washer,
Extruded

11ga Galv • galvanized finish

P/N **IGP-0002**
Flat Washer, 2-1/4"

11ga Galv • galvanized finish

HOW THE SYSTEM WORKS

WHOLE GRIP™ hardware secures the grab handle to the grating through a clamped assembly. The selected grab-handle washer supports the handle at the grating surface, while the flat washer supports the connection from beneath.

COMPLETED ASSEMBLY

ASSEMBLY SEQUENCE

1. Position the selected grab-handle washer (**IGP-0001** or **IGP-0006**) at the base of the handle.
2. Align the handle and washer with the intended grating opening.
3. Place **IGP-0002** beneath the grating and insert the project-specified fastener.
4. Secure and inspect the assembly in accordance with approved project requirements.

Assembly overview only. Final fastener selection, tightening requirements, and installation approval must follow project drawings and approved specifications.
