

# Transform Your Data & AI Governance with ADI

## Navigating the New Wave of Data and AI Governance

### Are you ready?

The rise of AI regulations, such as the EU AI Act, the pressure to comply with standards like ISO 42001 and NIST, and the emergence of generative AI and its inherent risks, have sent a clear message to organizations: **governance is no longer optional**. However, most companies still lack robust data governance and have yet to fully navigate the complex regulatory landscape, leaving critical gaps that need immediate attention.

#### Governance Key Challenges

Effective governance isn't something that's simply legislated and then forgotten. True governance is actively implemented and drives valuable use cases like master data management, metadata management, Customer 360 views, data marketplaces, and data monetization, among others.

### Partner with ADI for Proven, Implementable Data & AI Governance Strategies

- Bridge the Gap between Policy and Implementation**  
 Our data and AI strategies ensure the smooth implementation of regulations, covering compliance, data quality, AI ethics, and operational efficiency.
- Simplify Regulations and Standards**  
 With expertise in ISO 42001, NIST AI RMF, and the EU AI Act, we guide organizations through complex regulations, saving time and effort.
- Work with Experts**  
 Our hands-on experience managing data and AI systems in our own conglomerate equips us to deliver practical, effective governance solutions.
- Customize your Resource Allocation**  
 We help customers prioritize and adjust resources based on current needs, deploying the right expertise where it's needed most.
- Go with concrete and implementable solutions**  
 Our strategies are not just theoretical—they're designed for real-world execution, providing clear steps and measurable outcomes.
- Minimize Risks and Maximize Strategies**  
 Our data and AI strategies reduce risks and unlock the strategic potential of data for business growth.

### Is your governance model staying current and evolving with the times?

<p><b>Decentralized:</b> Local decision-making, central alignment.</p>	<p><b>Hybrid:</b> Local decisions with centralized support, balancing flexibility and control.</p>	<p><b>Centralized</b> Unified control and strong compliance focus, requiring more effort to implement.</p>
--	--	--

Our team specialized in building robust governance frameworks for complex, highly regulated industries, which include:

- |                                       |                               |
|---------------------------------------|-------------------------------|
| <b>Multilateral Development Banks</b> | <b>Insurance</b>              |
| <b>Banking Retail and Wholesale</b>   | <b>Public Sector</b>          |
| <b>FinTech and Digital Payments</b>   | <b>Energy &amp; Utilities</b> |

## Advanced Governance Strategy (AGS)

Advanced Governance Strategy (AGS) is ADI's comprehensive data and AI governance advisory service. ADI implements a collaborative team framework, deploying seasoned experts to ensure project success. Our dedicated specialists, supported by top data science and management professionals, provides tailored governance solutions, aligning perfectly with your strategic goals. We offer adaptability and strategic oversight, ensuring efficiency and expert-driven outcomes for your unique needs.

**Governance & Expertise**  
Data and AI Governance  
legislative and executive experts

**Strategic Execution**  
Support and orchestration by  
accountable and tactical managers

**Cross Functional Domain Expertise:**  
Data Management Experts,  
Data Science, ML Ops, and Industry  
Leaders

## AGS Service Deliverables

### Data and AI Governance Deliverables

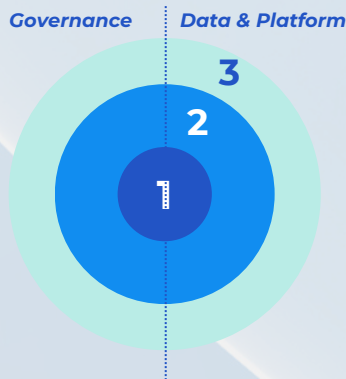

Governance Policy & Frameworks	Gap Assessments
Architecture Blueprints	Governance Operationalization Support
Target Operating Models	Compliance & Industry Advisory
Standard Operating Procedures (SOPs)	Internal Review Board Support
Guidelines Handbooks	Enablement Workshops
Roadshows & Socializations	Industry Benchmarks

### AI Governance (ISO-42001) Deliverables

<b>AI Development Guidelines</b> Key controls checklist, best practices, monitoring, and audit procedures.	<b>Control Application Guide</b> Data handling steps, risk mitigation, and compliance checklist.
<b>AI Objectives &amp; Risk Report</b> Organizational objectives, risk matrix, and mitigation plans.	<b>Domain Standards Documentation</b> Overview and compliance recommendations for client's specific domain.

## Data Audit Framework for Faster Governance and Delivery

Speed up data systems delivery with Data Audit. Assess your governance, data and platform to ensure delivery. Progressive and non-linear, reducing dependencies and process overhead. Ideal for Decentralized and Hybrid Governance models.

- 1. Data Readiness:** Ensures data is usable for its intended use
- 2. Data Integrity:** Ensures data is standard and of quality
- 3. Data Reliability:** Ensures data is resilient

## AGS Progression Framework

The AGS Progression Framework (AGS-PF) provides a structured, flexible approach to tackling your organization's Governance set up

## ABOUT US

ADI is a Singapore-headquartered AI solutions company reshaping industries with advanced data science and AI. A startup with 150 years of legacy. With a proven track record across sectors like banking, financial services, power, and industrials, our team of 100+ data scientists and AI algorithm engineers in 14+ countries delivers custom models, and GenAI platforms that drive outcome and impact.
