

Expanding an existing Evenli-operated site with a new charging device

Any charging device model supported by Evenli's operator service can technically be installed at an Evenli-operated site. You may expand the site with an existing device model or choose a different model from another supported manufacturer.

Evenli supports approximately 50 manufacturers and over 200 charging device models operating under the OCPP 1.6 or OCPP 2.0.1 protocol. To request the latest list of compatible charging devices, contact: myynti@evenli.com. You may also contact Evenli Sales to confirm model compatibility.

Examples of Supported Manufacturers

Customers may purchase a new charging device and its installation from any authorized electrical contractor. Evenli's sales team can recommend suitable device models and contractors based on your site and usage needs.

Activating the operation service for a new charging device

- Instructions for device installations can be found on our website in the Material Bank, under "Instructions for Installers":
<https://evenli.com/materiaalipankki> (in Finnish only)
- If this concerns a so-called shareholder parking space — for example in a housing company — and the user is responsible for the costs, the usage agreement is made in the Evenli mobile app, which can be downloaded from the App Store (Apple) or the Google Play Store (Android).
- A new charging device requires a data connection in order to function. If needed, you can order a SIM card from Evenli as an add-on service together with the usage agreement. We recommend obtaining the SIM card in advance, before the installation, so that the installer visit can be completed in one go and additional visits are avoided.
