

INSTALLER & DEVELOPER REFERENCE

Installation Process Overview

A quick reference for certified installers and property developers planning a Geyser Gecko rollout, single unit or multi-unit development.

Standard Installation — 4 Steps

1. Consultation	Confirm unit count, geyser specification, and site access or build programme.
2. Quote	Pricing issued based on unit count and site requirements. Volume pricing available for developments.
3. Installation	3–5 hours per unit. Electrical only — no plumbing changes. Certified installers work to SANS XA standards.
4. Handover	App pairing, compliance documentation, and a handover walkthrough for the homeowner or site team.

For Property Developments

Volume pricing	Scales with unit count across the development.
Coordinated scheduling	Phased installation across units, coordinated with your site team and build programme.
Compliance documentation	Provided per unit at handover for sign-off.
Portfolio monitoring	Gecko Hub gives visibility across every unit in a development from one dashboard.

Becoming a Certified Installer

Geyser Gecko provides certified training, marketing support through our installer directory, and bulk hardware pricing. Contact info@darkline.co.za to begin certification.

For bulk quotes, training schedules, or technical support, contact info@darkline.co.za or +27 12 012 5835.
