

Analyze every chart. Prove the care you delivered.

Your clinical narrative drives care outcomes, quality measure capture, and reimbursement. Sayvant Reflect reviews every chart across medical necessity, clinical quality, and complexity of care, and returns structured findings in near real time.

THE BLIND SPOT

It's impossible to scale clinical review to 100% of charts.

Case management, CDI, and pre-bill RCM reviews each identify a subset of documentation quality issues. Teams struggle to review 100% of charts before the clinical shift ends.

What Sayvant Reflect analyzes to prove you delivered great care.

 Medical Necessity Analyze requested patient status based on system disease definitions, case management guidelines, and payer criteria. ✓ Level of Admission ✓ 2-Midnight Rule ✓ Short Stay Exceptions	 Clinical Quality Assess defensibility of documented diagnoses and care plans against standards of care per hospital system, society, and CMS guidance. ✓ Dx Specificity ✓ CC/MCC Capture ✓ MS-DRGs + APR-DRGs ✓ MIPS	 Complexity of Care Evaluate if the clinical narrative accurately captures patient complexity, lab/imaging interpretation, and care delivered at the bedside. ✓ E/M levels ✓ Critical Care ✓ ACP ✓ Procedures and Interpretations

BUILT ON SQS

Sayvant Quality System

Sayvant Reflect is powered by the same physician-validated quality scoring engine that powers Sayvant chart generation: 1M+ acute care encounters, 3,000+ clinical documentation checks, three proprietary indexes measuring clinical, quality, and financial performance.

✓ HIPAA

✓ SOC 2 Type II

✓ US Data Residency

Analyze 100% of your group's encounters.

Submit notes via direct integration, flat files, or PDFs. Sayvant Reflect returns structured analysis on clinical quality, fee capture, and admission level for every encounter, in near real time.

Personalized Recommendations

Prescriptive feedback on every note. Flag specific, quantifiable improvement opportunities.

Aggregated Patterns

Identify the highest leverage patterns and gaps across the group. Benchmark performance and identify clinicians in need of coaching.

Ongoing Review

Increase review coverage from <5% today to 100% of charts, at a fraction of the cost of manual audit. Trend performance and quality improvement initiatives over time.

REAL-WORLD SAYVANT REFLECT FINDINGS

Generate immediate recommendations and coaching opportunities.

CASE STUDY

MEDICAL NECESSITY REVIEW

\$1.59M in medical-necessity denial exposure

identified per 1,000 discharges

22%

of charts couldn't defend the requested level of care

39%

of admissions had gaps in medical-necessity documentation

CASE STUDY

DRG CAPTURE REVIEW

\$1.11M in total DRG exposure

identified per 1,000 discharges

21%

of charts had missed CC/MCC opportunities

23%

of charts had findings that impact DRG payment

Scale clinical review to 100% of discharges.
