TIER 0

A Unified Namespace Platform For Industrial Data.

Deliver Apps In Days

When new requirements arrive, integrations across **MES/SCADA/WMS/ERP** don’t need to be rebuilt. Existing real-time data can be subscribed to and mapped to new use cases.

Lower Cost,
Clear ROI

Tier0 is offered as an **annual subscription**, not a one-time purchase.

Lightweight and composable by design, Tier0 keeps infrastructure and operations lean, with measurable and sustained returns from **day 1**.

Annual Subscription

TIER 0 + Apps

- ✓ One platform, multiple applications
- ✓ 3-20 weeks to ship apps (e.g., MES)
- ✓ Reusable logic and data
- ✓ Self-service and open architecture
- ✓ ROI compounds over time

50% Lower Cost

VS

Fixed-Price Project

Traditional Project

- ☐ Every system is a new project
- ☐ 6-12 months delivery (e.g., MES)
- ☐ High customization cost
- ☐ Vendor lock-in
- ☐ ROI ends with the project

Extensible
By Design

Tier0 enables **self-service development**. Engineers and solution teams can build, extend, and iterate integrations and apps on Tier0.

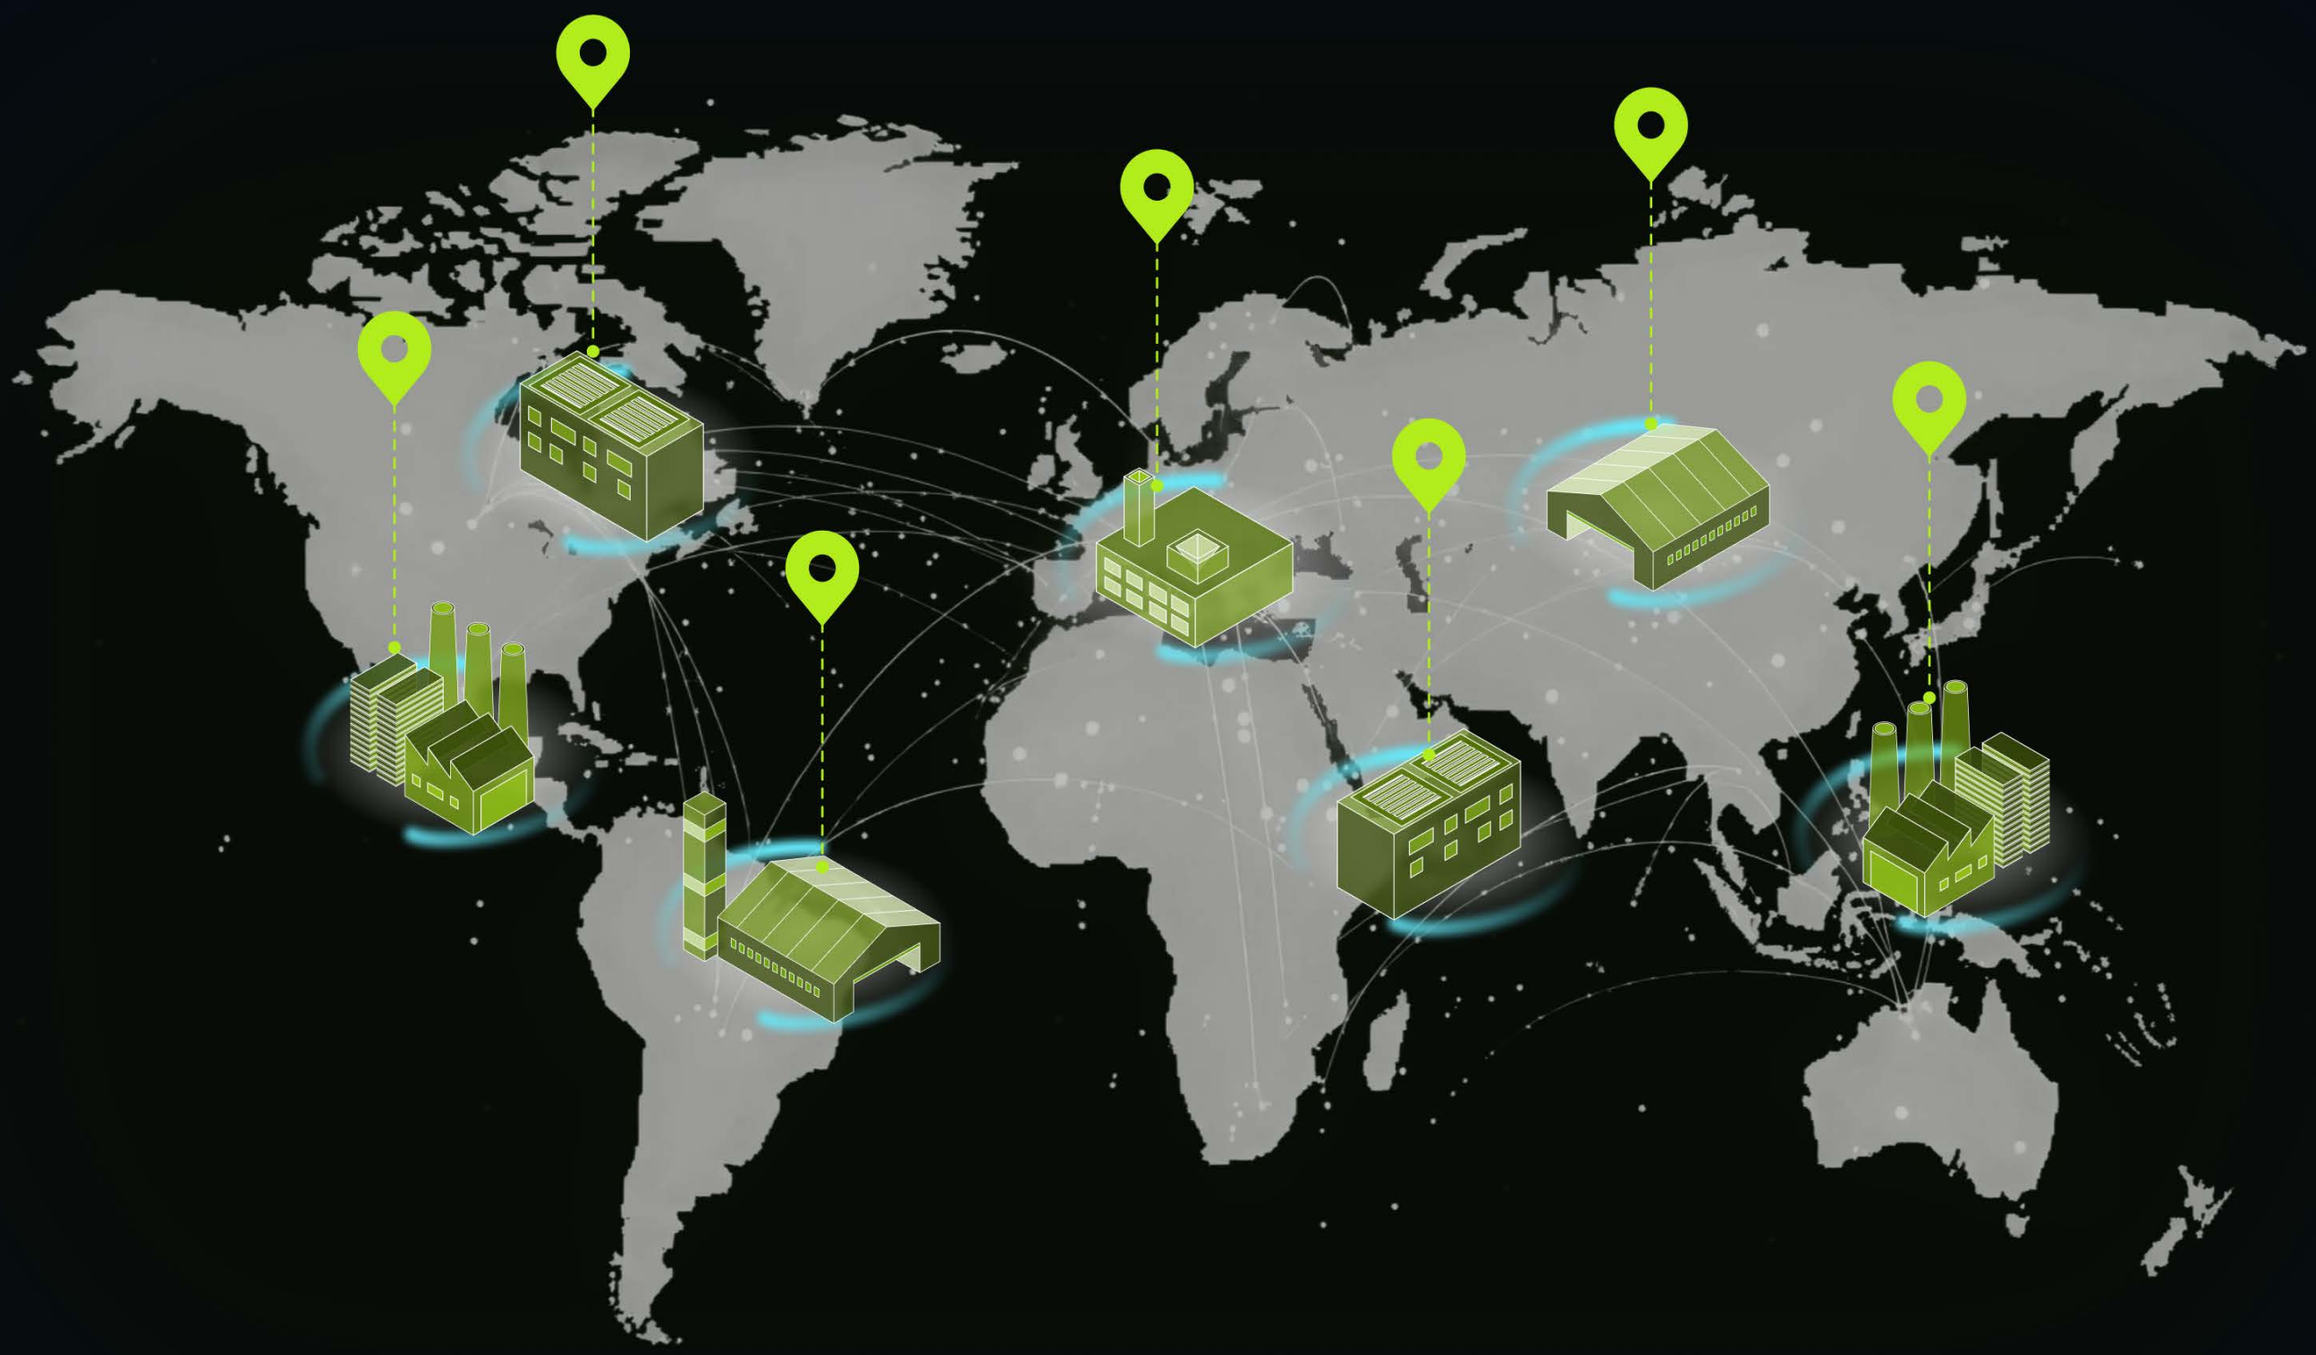

Built on **open standards**, integrations remain portable and evolvable across sites, systems, and deployments.

Scale Globally

Built on open technologies and optimized for **global deployment**.

From pilot to multi-site rollout, architecture, deployment, and operations remain consistent and controllable. Scale safely across factories and regions with confidence.

Ready For AI

Tier0 turns real-time factory data into semantic, AI-ready context for **Python notebooks** and **agent workflows**.

With **MCP**, Tier0 connects data and actions to the **AI / Agent** ecosystem for rapid integration. This enables a seconds-level loop from live data to insights and automated workflows.
