

Why PortX?

AI-Powered Data and Integration for Modern Banking

The only AI-powered platform unifying apps and data for banks, credit unions, and fintechs.

The Challenge

Community banks and credit unions need to:

- Compete with big banks by adopting best-of-breed fintechs.
- Deliver real-time insights to leaders and teams.
- Control access and publish trusted “blessed” data across the institution.

But legacy systems, fragile pipelines, and disconnected vendors make this costly and complex.

Integration and data aren’t two problems; they’re one.

Treating them separately creates vendor sprawl, duplication, and rising costs. Solving them together delivers **clarity, speed, and trusted real-time insight** across the institution.

The PortX Advantage

Unified Approach.	Application integration and data integration solved together in one hub. No silos, no sprawl.
Purpose-Built for FIs.	The only AI-powered integration + data solution designed specifically for banks and credit unions.
Trusted Real-Time Data.	Publish “blessed” data instantly across the enterprise for confident decisions.
Best-of-Breed Freedom.	Connect any fintech, core, or app without vendor lock-in.
Compliance Built-In.	SOC 2, ISO 27001, FAPI, FDX, PCI: with continuous updates to reduce risk.
Proven in the Market.	A leading FI compared a patchwork of warehouses, middleware, and analytics tools (millions in cost, years to deliver). With PortX: the same breadth of capabilities in one unified platform at half the cost, with results in months.

Business Impact

Faster Outcomes

ROI in months, not years.

Lower Risk

One integrated solution
simplifies delivery and
governance.

Dramatic Cost Savings

Enterprise-grade
integration + analytics at a
fraction of the cost.

The Bottom Line

PortX is the **data and integration hub built for financial institutions**, connecting any app, unifying all your data, and empowering real-time decision-making.
